FINANCIAL ASSISTANCE FUNDING OPPORTUNITY ANNOUNCEMENT

ADVANCED RESEARCH PROJECTS AGENCY – ENERGY (ARPA-E) U.S. DEPARTMENT OF ENERGY

RENEWABLE ENERGY TO FUELS THROUGH UTILIZATION OF ENERGY-DENSE LIQUIDS (REFUEL) (SBIR/STTR)

Announcement Type: Modification 01-Modification 02 Funding Opportunity No. DE-FOA-0001563 CFDA Number 81.135

Funding Opportunity Announcement (FOA) Issue Date:	April 26, 2016
First Deadline for Questions to <u>ARPA-E-CO@hq.doe.gov</u> :	5 PM ET, May 18, 2016
Submission Deadline for Concept Papers:	5 PM ET, June 1, 2016
Second Deadline for Questions to <u>ARPA-E-CO@hq.doe.gov</u> :	5 PM ET, <mark>TBD</mark> August 29, 2016
Submission Deadline for Full Applications:	5 PM ET, <mark>TBD</mark> September 8, 2016
Submission Deadline for Replies to Reviewer Comments:	5 PM ET, <mark>TBD</mark> October 25, 2016
Expected Date for Selection Notifications:	<mark>TBD</mark> November 2016
Total Amount to Be Awarded	Approximately \$5 million, subject to the availability of appropriated funds.
Anticipated Awards	ARPA-E may issue one, multiple, or no awards under this FOA. Awards may vary between \$225,000 and \$3.225 million.

- For eligibility criteria, see Section III.A III.D of the FOA.
- For cost share requirements under this FOA, see Section III.E of the FOA.
- To apply to this FOA, Applicants must register with and submit application materials through ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov/Registration.aspx</u>). For detailed guidance on using ARPA-E eXCHANGE, see Section IV.H.1 of the FOA.
- Applicants are responsible for meeting the submission deadline. Applicants are strongly encouraged to submit their applications at least 48 hours in advance of the submission deadline.
- For detailed guidance on compliance and responsiveness criteria, see Sections III.F.1 III.F.4 of the FOA.

MODIFICATIONS

All modifications to the Funding Opportunity Announcement (FOA) are highlighted in yellow in the body of the FOA.

Mod. No.	Date	Description of Modifications			
01	05/25/2016	• Extended the Submission Deadline for Concept Papers to June 1,			
		2016, see Cover page and Required Documents Checklist.			
<mark>02</mark>	<mark>7/26/2016</mark>	 Inserted certain deadlines, including the deadlines for submitting 			
		questions and Full Applications. See Cover Page and Required			
		Documents Checklist.			
		 Clarified information regarding source-to-use energy cost. See Section 			
		I.C of the FOA.			
		 Inserted information regarding source-to-use energy cost estimation 			
		for Full Applications. See Section I.F of the FOA.			
		 Inserted Responsiveness Criteria regarding source-to-use energy cost. 			
		See Section III.F.2 of the FOA.			
		 Revised the following sections of the FOA to provide guidance on 			
		required application forms and the content and form of Full			
		Applications and Replies to Reviewer Comments: Required			
		Documents Checklist and Sections IV.D, IV.E, and IV.G of the FOA.			
		Applicants are strongly encouraged to use the templates provided on			
		ARPA-E eXCHANGE (<u>https://arpa-e-toa.energy.gov</u>).			
		 Inserted criteria that ARPA-E will use to evaluate Full Applications, see Section V(A) a state 504 			
		Section V.A.2 of the FOA.			
		Inserted Chieffa that ARPA-E will use to evaluate Replies to Reviewer Comments in Section V.A.2 of the EQA			
		Continents in Section V.A.S of the FOA.			
		Clarified Program Policy Pactors to Include the 0.5. Manufacturing Plan under Relevance to ARPA-F Mission Advancement, see Section			
		V B 1 of the EOA			
		 Inserted information on the anticipated appouncement and award 			
		dates, see Section V.C of the FOA.			
		Inserted information concerning Full Application Notifications, see			
		Section VI.A.3 of the FOA.			
		 Inserted Administrative and National Policy Requirements, see 			
		Section VI.B of the FOA.			
		 Inserted Reporting Requirements, see Section VI.C of the FOA. 			
		 Inserted Determination of Exceptional Circumstances (DEC) 			
		Requirement, see Section VIII.F of the FOA.

REQUIRED DOCUMENTS CHECKLIST

For an overview of the application process, see Section IV.A of the FOA.

For guidance regarding requisite application forms, see Section IV.B of the FOA.

For guidance regarding the content and form of Concept Papers, Full Applications, and Replies to Reviewer Comments, see Sections IV.C, IV.D, and IV.E of the FOA.

SUBMISSION	COMPONENTS	OPTIONAL/ MANDATORY	FOA SECTION	DEADLINE
Concept Paper	 Each Applicant must submit a Concept Paper in Adobe PDF format by the stated deadline. The Concept Paper must not exceed 4 pages in length and must include the following: Concept Summary Innovation and Impact Proposed Work Team Organization and Capabilities 	Mandatory	IV.C	5 PM ET, June 1, 2016
Full Application	 [TO BE INSERTED BY FOA MODIFICATION IN JULY 2016] Each Applicant must submit a Technical Volume in Adobe PDF format by the stated deadline. Applicants may use the Technical Volume template available on ARPA-E eXCHANGE (https://arpa-e-foa.energy.gov). The Technical Volume must include the following: Executive Summary (1 page max.) Sections 1-5 (30 pages max.) 1. Innovation and Impact 2. Proposed Work 3. Team Organization and Capabilities 4. Technology to Market 5. Budget Bibliographic References (no page limit) Personal Qualification Summaries (each PQS limited to 3 pages in length, no cumulative page limit) The Technical Volume must be accompanied by: SF-424 (no page limit, Adobe PDF format); Budget Justification Workbook/SF424A (no page limit, Microsoft Excel format) Summary for Public Release (250 words max., Adobe PDF format); Summary Slide (1 page limit, Microsoft PowerPoint format) – Applicants may use the Summary Slide template available on ARPA-E eXCHANGE (https://arpa-e-foa.energy.gov); 	Mandatory	IV.D	<mark>5 PM ET, TBD September 8, 2016</mark>

	 SBA Company Registration Certificate generated in the SBA Company Registry (http://sbir.gov/registration) (Adobe PDF format); If applicable, Certification for Applicants Majority- Owned by Multiple Venture Capital Operating Companies, Hedge Funds, or Private Equity Firms Applicants may use the SBIR VCOC Certification template available on ARPA-E eXCHANGE, (https://arpa-e-foa.energy.gov) (Adobe PDF format); Completed and signed Business Assurances & Disclosures Form (no page limit, Adobe PDF format); U.S. Manufacturing Plan (1 page limit, Adobe PDF format); and Cost Analysis Workbook (no page limit, Microsoft Excel format) – Applicants may use the REFUEL Cost Analysis Workbook template available on ARPA-E eXCHANGE (https://arpa-e-foa.energy.gov). 			
Reply to Reviewer Comments	 [TO BE INSERTED BY FOA MODIFICATION IN JULY 2016] Each Applicant may submit a Reply to Reviewer Comments in Adobe PDF format. This submission is optional. Applicants may use the Reply to Reviewer Comments template available on ARPA-E eXCHANGE (https://arpa-e- foa.energy.gov). The Reply may include: Up to 2 pages of text; and Up to 1 page of images. 	Optional	IV.E	<mark>5 PM ET, TBD October 25, 2016</mark>

I. FUNDING OPPORTUNITY DESCRIPTION

A. <u>AGENCY OVERVIEW</u>

The Advanced Research Projects Agency – Energy (ARPA-E), an organization within the Department of Energy (DOE), is chartered by Congress in the America COMPETES Act of 2007 (P.L. 110-69), as amended by the America COMPETES Reauthorization Act of 2010 (P.L. 111-358) to:

- "(A) to enhance the economic and energy security of the United States through the development of energy technologies that result in—
 - (i) reductions of imports of energy from foreign sources;
 - (ii) reductions of energy-related emissions, including greenhouse gases; and
 - (iii) improvement in the energy efficiency of all economic sectors; and
- (B) to ensure that the United States maintains a technological lead in developing and deploying advanced energy technologies."

ARPA-E issues this Funding Opportunity Announcement (FOA) under the programmatic authorizing statute codified at 42 U.S.C. § 16538. The FOA and any awards made under this FOA are subject to 2 C.F.R. Part 200 as amended by 2 C.F.R. Part 910.

ARPA-E funds research on and the development of high-potential, high-impact energy technologies that are too early for private-sector investment. The agency focuses on technologies that can be meaningfully advanced with a modest investment over a defined period of time in order to catalyze the translation from scientific discovery to early-stage technology. For the latest news and information about ARPA-E, its programs and the research projects currently supported, see: <u>http://arpa-e.energy.gov/</u>.

ARPA-E funds transformational research. Existing energy technologies generally progress on established "learning curves" where refinements to a technology and the economies of scale that accrue as manufacturing and distribution develop drive down the cost/performance metric in a gradual fashion. This continual improvement of a technology is important to its increased commercial deployment and is appropriately the focus of the private sector or the applied technology offices within DOE. By contrast, ARPA-E supports transformative research that has the potential to create fundamentally new learning curves. ARPA-E technology projects typically start with cost/performance estimates well above the level of an incumbent technology. Given the high risk inherent in these projects, many will fail to progress, but some may succeed in generating a new learning curve with a projected cost/performance metric that is significantly lower than that of the incumbent technology.

ARPA-E funds technology with the potential to be disruptive in the marketplace. The mere creation of a new learning curve does not ensure market penetration. Rather, the ultimate

value of a technology is determined by the marketplace, and impactful technologies ultimately become disruptive – that is, they are widely adopted and displace existing technologies from the marketplace or create entirely new markets. ARPA-E understands that definitive proof of market disruption takes time, particularly for energy technologies. Therefore, ARPA-E funds the development of technologies that, if technically successful, have the clear disruptive potential, e.g., by demonstrating capability for manufacturing at competitive cost and deployment at scale.

ARPA-E funds applied research and development. The Office of Management and Budget defines "applied research" as "systematic study to gain knowledge or understanding necessary to determine the means by which a recognized and specific need may be met" and defines "development" as the "systematic application of knowledge or understanding, directed toward the production of useful materials, devices, and systems or methods, including design, development, and improvement of prototypes and new processes to meet specific requirements."¹ Applicants interested in receiving financial assistance for basic research should contact the DOE's Office of Science (http://science.energy.gov/). Office of Science national scientific user facilities (http://science.energy.gov/user-facilities/) are open to all researchers, including ARPA-E Applicants and awardees. These facilities provide advanced tools of modern science including accelerators, colliders, supercomputers, light sources and neutron sources, as well as facilities for studying the nanoworld, the environment, and the atmosphere. Projects focused on the improvement of existing technology platforms along defined roadmaps may be appropriate for support through the DOE offices such as: the Office of Energy Efficiency and Renewable Energy (http://www.eere.energy.gov/), the Office of Fossil Energy (http://fossil.energy.gov/), the Office of Nuclear Energy (http://www.energy.gov/ne/officenuclear-energy), and the Office of Electricity Delivery and Energy Reliability (http://energy.gov/oe/office-electricity-delivery-and-energy-reliability).

B. <u>SBIR/STTR Program Overview</u>

The Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs are Government-wide programs authorized under Section 9 of the Small Business Act (15 U.S.C. § 638). The objectives of the SBIR program are to (1) stimulate technological innovation in the private sector, (2) strengthen the role of Small Business Concerns in meeting Federal R&D needs, (3) increase private sector commercialization of innovations derived from Federal R&D activities, (4) foster and encourage participation by socially and economically disadvantaged and women-owned Small Business Concerns, and (5) improve the return on investment from Federally funded research and economic benefits to the Nation. The objective of the STTR program is to stimulate cooperative partnerships of ideas and technologies

¹ OMB Circular A-11

(http://www.whitehouse.gov/sites/default/files/omb/assets/a11 current year/a11 2014.pdf), Section 84, p. 8.

between Small Business Concerns and partnering Research Institutions through Federally funded R&D activities.²

ARPA-E administers a joint SBIR/STTR program in accordance with the Small Business Act and the SBIR and STTR Policy Directives issued by the U.S. Small Business Administration (SBA).³ ARPA-E provides SBIR/STTR funding in three phases (Phase I, Phase II, and Phase IIS).

C. <u>Program Overview</u>

1. Summary

The purpose of the Renewable Energy to Fuels through Utilization of Energy-dense Liquids (**REFUEL**) program is to develop scalable technologies for conversion of electrical or thermal energy from renewable sources into chemical energy contained in energy dense Carbon-Neutral Liquid Fuels (CNLF) that can be stored, transported, and later converted into hydrogen or electricity to provide power for transportation and distributed energy generation. The overall structure of the REFUEL program is illustrated in Figure 1 below. Because CNLFs can be stored for extended periods of time and then transported to consumers using existing and inexpensive technology for liquid fuel delivery and distribution, they offer a unique opportunity to reduce both the need for energy imports and carbon emissions from the transportation sector. In meeting that need, they also have the potential to enable increased penetration of intermittent renewable energy sources. The success of this program depends on developing technologies in two categories: (1) the synthesis of CNLFs using intermittent renewable energy sources and water and air (N2 and CO2) as the only chemical input streams and (2) the conversion of CNLFs delivered to the end point to another form of energy (e.g. hydrogen or electricity).

³ See 77 Fed. Reg. 46806 (Aug. 6, 2012); 77 Fed. Reg. 46855 (Aug. 6, 2012).

² Research Institutions include FFRDCs, nonprofit educational institutions, and other nonprofit research organizations owned and operated exclusively for scientific purposes. Eligible Research Institutions must maintain a place of business in the United States, operate primarily in the United States, or make a significant contribution to the U.S. economy through the payment of taxes or use of American products, materials, or labor.

Figure 1. The production, transport and use of carbon-neutral liquid fuels for energy delivery. Areas of interest within Category 2 in this FOA are shown in bold.

The program's overall goal is a competitive total cost (including production, transportation, storage, and conversion costs) of *delivered* (*source-to-use*) energy (e.g. converted to motive power for transportation) as opposed to the *primary* energy stored in chemical form **below \$0.3/kWh**, the price needed to be competitive with other carbon-free delivery methods, as will be discussed in Section B. The source-to-use energy cost (SUE) is defined here as the sum of the fuel production cost (CF), the cost of transportation or transmission from production to the user (CT), and the cost of any storage (CS), divided by the conversion efficiency (η) to account for any losses during the conversion steps, and the capital cost of fuel conversion (CC)⁴:

$$SUE = \frac{CF + CT + CS}{\eta} + CC$$
(1)

Representative values for several commercial approaches to providing transportation energy are given in Table 1 using gasoline burned in internal combustion engines (ICEs) as a baseline. The standard commercial process for producing H₂ (either as the final product, or as a feedstock for ammonia production) is thermochemical steam-methane reforming (SMR). The corresponding values in the table are calculated based on literature cited in the footnotes. The column titled "Electricity" is representative of moving electricity across the current grid and storing it in an electric vehicle (EV) battery. The values contained in Table 1 will be discussed further in the context of carbon-free fuels in the following sections of this document.

⁴ In preparation for Full Application submission, please see Section I.F of the FOA for further details on the SUE analysis.

	Gasoline	Hydrogen by SMR	Ammonia by SMR/Haber-Bosch	Electricity
Specific energy density, kWh/kg	12.7	33.3	5.16	
Energy density, kWh/L	8.76	0.8	4.25	
Fuel cost, \$/kg	0.54ª	1.95 ^b	0.325 ^c	
Fuel cost, \$/kWh	0.047	0.058	0.063	0.065 ^d
Transmission cost, \$/kWh ^e	0.001	0.060	0.004	0.038 ^d

Technologies developed under the REFUEL program will enable long-term (i.e. multi-day capacity) energy storage and long-distance renewable energy delivery from remote, isolated, and/or stranded locations and create an affordable refueling infrastructure of clean fuels. Furthermore, all of these applications will support the goal of substantially reducing carbon emissions. Implementation of the aggressive targets of the REFUEL program will require R&D teams to be built from several communities, including: electrocatalysis, heterogeneous catalysis, materials science, electrochemical systems design, gas separation, process engineering, and systems integration.

2. PROGRAM MOTIVATION

Chemicals, such as hydrocarbons, are effective energy carriers and return the largest fraction of their energy density when delivered via a pipeline. However, fossil fuels are major CO2 emitters and also drive energy imports. Reducing energy imports from foreign sources and energy-related emissions, including greenhouse gas (GHG) emissions, which are partof ARPA-E's mission areas, could be achieved by: (1) shifting to cleaner transportation fuels, e.g. hydrogen and biofuels; (2) increased use of low-carbon electricity generation forms, e.g. solar and wind;

and (3) enhancements in the efficiency and reliability of U.S. electric power distribution system. REFUEL targets areas (1) and (2) with ancillary benefits for area (3).

We define CNLFs in this FOA as: hydrogen-rich liquid fuels made by converting molecules contained in air (N2, CO2) and hydrogen from water into energy-carrying liquids at moderate temperatures and pressures using renewable energy sources. Hydrogen is the simplest chemical that can be considered for use as a CNLF (in liquid form), and stationary fuel cells and vehicles using hydrogen as a fuel are maturing technologies.5 The standard commercial process for producing H2 is thermochemical steam-reforming of methane (SMR). H2 produced in this way is not a carbon neutral fuel, as the chemical process produces one molecule of CO2 for every four H2 molecules, 6 and the thermal energy necessary for the process is provided by CO2 emitting fossil fuel sources. Generation of carbon-neutral hydrogen is possible using electrolysis of water, if the electricity is provided from renewable sources such as wind or solar, or from nuclear energy.7 Currently, the most advanced method for H2 production is either polymer electrolyte membrane (PEM) or alkaline water electrolysis.

Clean hydrogen is used in commercial fuel cell electric vehicles (FCEV) to achieve carbonneutral transportation.8,9 However, the limitations of hydrogen storage and transportation, which will be described below, have limited the growth of a hydrogen infrastructure, generating a hurdle to widespread adoption of FCEVs.10,11 This infrastructure will not be built while the number of FCEVs using it remains low (classic "chicken and egg" problem).

Because of the inherent difficulties in achieving zero-carbon emissions with fossil fuels in the transportation sector, we must consider new options. The REFUEL program seeks to address these challenges by developing CNLFs that provide a new set of technology options for storing renewable energy in CNLFs, and delivering it economically and effectively when and where it is needed.

The following section provides examples technologies and their impact with respect to four topic areas: (1) hydrogen for energy storage and deliver; (2) opportunities for CNLFs; (3) delivery of energy services from CNLFs; and (4) ancillary benefits in integration of renewable power sources.

Hydrogen for energy storage and delivery

Chemical energy storage in hydrogen can be combined with energy transmission in the form of a compressed gas or a cryogenic liquid. Some relevant properties of hydrogen are listed in Table 2, with a comparison to gasoline, ethanol, and a potential alternative CNLF (described below). Hydrogen has extremely high specific energy (39.4 kWh/kg, HHV) but a rather low volumetric energy density (theoretical values are 2.28 kWh/L as a liquid and 1.55kWh/L as gas at 700 bar, which is reduced to 1.7 and 0.8 kWh/L in practical systems).12 The only industrial carbon-neutral method of hydrogen production is water electrolysis, when electricity is generated by renewable sources, using commercial PEM or alkaline electrolyzers or emerging solid oxide electrolytic cells (SOEC). Hydrogen can be utilized in a variety of fuel cells, e.g. PEM fuel cells or solid oxide fuel cells (SOFC) and, with lower efficiency, in internal combustion engines or turbines for both stationary and mobile applications. One disadvantage of hydrogen is the 30 – 45% round trip efficiency (RTE) due to the less than 70% generation efficiency water electrolysis to form hydrogen and the 55 – 65% conversion efficiency in fuel cells to produce electricity.

Hydrogen compression and, especially, liquefaction incur additional energy losses (up to 10 and 35%, respectively). In contrast to liquid H₂, which boils-off with a rate of 1 - 4% per day depending on the tank,¹³ hydrogen storage and transportation as a compressed gas has very low losses. Therefore, the latter is a more attractive option for long-term storage (from days to seasonal). Average cost of hydrogen transportation via a 750 mile long pipeline is estimated to be $\$1 - 2/kg H_2$ or \$0.03 - 0.06/kWh,¹⁴ which is substantially more expensive than pipeline transportation of gasoline (about \$0.025/gal or \$0.001/kWh)¹⁵ or ammonia (\$34/t on per 1000 miles or \$0.004/kWh for 750 miles).¹⁶

Opportunities for CNLFs

The use of energy-dense liquids, e.g. liquid ammonia or renewable hydrocarbons, with a similar RTE may be an attractive alternative to H₂, due to the absence of or low compression losses. Storage and transportation costs can be even lower if the carbon-neutral production cost is higher than that of H₂. Such CNLFs could be used in appropriately designed fuel cells. Alternatively, the costs of compression and storage, which is the major cost of the H₂ refueling station,¹⁷ can be reduced by using with CNLFs as hydrogen carriers and the existing liquid fuel infrastructure technologies. An ANL/TIAX analysis of hydrogen delivery. using liquid hydrogen carriers with a hydrogen content of 6 – 7 wt.%, showed that the carrier hydrogen delivery cost will be lower than liquid or compressed (700 bar) hydrogen.¹⁸ CNLFs with higher hydrogen content will be even less costly. Some examples of potential CNLFs are presented in the following section.

The fuels discussed in this section are representative examples of the types of fuels that would be deemed responsive to this FOA, but this are not intended to be an exhaustive list.

Some promising CNLFs are already manufactured thermochemically at a large commercial scale (at least several thousand tons per year). The second most manufactured chemical in the world, ammonia (NH₃), is produced at large-scale Haber-Bosch plants. Production volume is 160 million tons per year with 9.6 million tons produced in the U.S..¹⁹ Hydrogen is combined with nitrogen over a catalyst at temperatures ranging from 380 to 520 °C and pressures ranging from 150 to 250 bar, Equation (2).^{20,21} Optimization of process temperatures and pressures, as well as catalyst material developments over the years have resulted in 30% efficiency improvements, but the process still accounts for 1 - 2% of global energy consumption.²²

$$N_2 + 3H_2 \to 2NH_3 \tag{2}$$

Modern Haber-Bosch plants, using hydrogen generation by SMR, release about 1.6 - 1.8 ton CO_2 per ton of NH₃ of which only 0.95 ton comes from the SMR process and the rest from heating and pressurization needs.²³ Energy consumption for NH₃ production using SMR varies from 7.8 to 10.5 MWh per ton of NH₃ (including feedstock, which accounts for 80% of

energy).²⁴ A potentially greener technology option of using hydrogen from water electrolysis requires 9.5 MWh to make 1 metric ton NH₃²⁵ (of which 8.9 MWh comes from hydrogen production, assuming 50.2 kWh/kg H₂).²⁶ Solid-state electrochemical ammonia synthesis, a possible alternative to the Haber-Bosch process, has potentially lower energy input and operational pressure and temperature²⁷ thus simplifying the balance of plant, and could be cost competitive as long as the reaction rate is significantly increased.

Ammonia is in the liquid state below -33 °C or under 15 bar at ambient temperature and has an energy density of 4.25 kWh/L. This value is 35% higher than the energy density of liquid hydrogen (in reality the difference is even larger due to large energy requirements for H₂ liquefaction) and 2.5 times higher than that of hydrogen compressed to 700 bar. It is widely used as a fertilizer, a refrigerant, and a feedstock for the chemical industry The use of ammonia as a fuel, energy carrier and hydrogen storage material has also been widely discussed.^{28,29,30}

Another example of a nitrogen-based energy-dense fuel is hydrazine hydrate (N₂H₄·H₂O). It is currently produced by oxidation of ammonia at a large scale (80,000 ton/year globally) and is therefore more expensive than ammonia. However, it has a high energy density (3.56 kWh/L), is easy to handle (freezing point -51.7 °C, flash point 74 °C) and, if low-cost synthetic methods are developed, it may fit the technical targets of this FOA. To accomplish wide-scale implementation of CNLFs, technological advances in both the production and conversion of this fuel would need to be achieved. An example of a non-toxic substitute for hydrazine with low carbon footprint is carbohydrazide (CH₆N₄O). Carbohydrazide has been used as a fuel in a fuel cell with an OCV 1.65V.³¹

Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

In terms of carbon containing CNLFs, there are numerous examples that would fit the definition, such as hydrocarbon fuels such as synthetic gasoline or diesel fuel, alcohols, and dimethyl ether. The requirements are that the carbon is directly taken from the atmosphere or another sustainable CO₂ source and that the fuel is produced in a one-pot chemical or electrochemical process. Current processes for production of synthetic fuels such as Fischer-Tropsch process are multi-step, very capital intensive and eventually not economical. Reducing the process complexity may allow increased efficiency and lower costs. A viable pathway to generate power (e.g. in fuel cells or ICEs as a drop-in fuel) or hydrogen should be demonstrated or adopted from literature. In addition, carbon containing CNLFs must have the potential to meet the source-to-use energy cost targets.

Delivery of Energy Services from CNLFs

For the REFUEL program, the primary end use for a CNLF is either direct conversion to electricity in a fuel cell, or cracking to release hydrogen for subsequent use in a fuel cell to delivery carbon-free power for transportation.

Conversion of CNLFs to electricity

CNLFs may be converted into useful work after transportation and/or storage either directly or indirectly. In this FOA, direct conversion is defined as delivering the fuel to a fuel cell anode without any prior chemical conversion to generate electricity directly. Indirect conversion includes fuel that is reformed (cracked) such that hydrogen is stored/delivered at the endpoint of the transportation and distribution system for further use in fuel cells.

CNLFs can be converted to electricity using fuel cells, which are electrochemical devices in which the fuel is separated from an oxygen source by an electrolyte. The CNLF can be fed to the fuel cell anode; there it is either electrochemically oxidized directly, or converted to hydrogen which is then oxidized. Existing DOE programs in the Office of Energy Efficiency and Renewable Energy (EERE)³² and the Office of Fossil Energy³³ have focused on low temperature PEM fuel cells and high temperature SOFCs for transportation and stationary power applications, respectively. Over the past ten years, these programs have advanced PEM and SOFC technologies in both performance and cost. In 2014, ARPA-E started the Reliable Electricity Based on ELectrochemical Systems (REBELS)³⁴ program, focusing on fuel cells operating in an intermediate temperature range of 200 - 500 °C.

One CNLF that has received significant attention for electrochemical conversion is ammonia. Alkaline fuel cells containing Pt³⁵ or Ni³⁶ anode electrocatalyst and operating from 40 to 450 °C

have been powered with ammonia. In these studies, the peak power density ranged from 2 to 40 mW/cm², which are modest values compared to PEM and SOFC devices. To increase the power density it is necessary to minimize ammonia crossover through the electrolyte. Another approach to ammonia fuel cells is with SOFCs operating around 550 – 800 °C. In this temperature range, ammonia is first decomposed, followed by electrochemical oxidation of hydrogen. The demonstrated peak power density on ammonia fuel was 1028 mW/cm² at 800 °C.³⁷ The decrease in power when switching from hydrogen to ammonia was approximately 10%. These impressive power densities show the promise of direct ammonia fuel cells.

Other liquid fuels including hydrazine have been used in direct fuel cells.³⁸ Ethanol, a product of biomass anaerobic digestion has been used in SOFCs with the performance similar to ammonia.³⁹ Liquid fuels such as toluene, n-decane, and synthetic diesel⁴⁰ as well as palm-derived biodiesel⁴¹ have been shown to operate stably at 700 – 800 °C. However, the long-term stable performance of such systems will likely be a challenge, due in part to increases in ohmic resistance from coke formation.

Generating H₂ from CNLFs

Generation of hydrogen from CNLFs can provide a viable path to affordable hydrogen refueling stations. Currently, about 75% of the refueling station capital cost is compression and storage.⁴² Compressor cost sharply increases with the size, which is required for fast transfer of daily hydrogen delivery. In addition, large hydrogen compressors have so far demonstrated inadequate reliability. Continuous cracking of a CNLF to supply smaller size compressors for smaller high pressure tanks will allow modular capability and increase the station reliability. The use of liquid fuels to generate hydrogen on demand may allow dramatically reduced size and footprint of the storage and compressors. Storage of 300 kg compressed hydrogen occupies 450 sq. ft.⁴³ while the energy equivalent amount of liquid ammonia takes 10 times less space and can be placed underground in a standard 1000 gallon tank.

Cracking of ammonia is well known and is already a commercial process. In spite of high cracking temperature and expensive catalysts it is considered as viable option for hydrogen delivery.⁴⁴ Recently, it has been reported that inexpensive alkali metal amides may replace or reduce loading of platinum group metal (PGM)-based catalysts and substantially reduce the

cracking temperature.⁴⁵ Another potential approach to H₂ generation from CNLFs is electrolysis. For example, ammonia oxidation to H₂ has a low potential (0.06V) and therefore has much lower energy requirements (1.55 kWh/kg H₂) compared to water electrolysis.⁴⁶ Several approaches to liquid NH₃ electrolysis have been demonstrated⁴⁷ but the development of more effective electrocatalysts and cell designs is necessary.

CNLFs, especially hydrocarbons and ammonia, can potentially be used directly or as a blend in internal combustion engines or turbines. Such applications, including fuel blending or engine modifications that allows the direct use of non-traditional fuels are outside the scope of this FOA.

Ancillary benefits in integration of renewable power sources

Penetration of renewables (solar, wind, biomass) has been limited by restricted power flow control options for the grid, grid resilience, intermittency, poor long-term predictability, and poor geographic matching of supply and demand. These problems can lead to curtailment of renewable production, and the use of less cost effective alternatives such as fast-ramping natural gas turbines ("peaker plants"). If the present grid structure continues, it is estimated that from $5.5\%^{48}$ to $21\%^{49}$ of variable generation (100 - 400 TWh) will be curtailed in 2050 at 50% renewables penetration. Further increasing the renewables penetration to 80% would require 95 - 115 GW of storage capacity.⁵⁰

With a variety of grid modernization approaches, such as demand response, under way, it is likely that the amount of storage needed to integrate high renewable penetration will be reduced, but will still be very significant. The production of CNLFs from renewable power can potentially serve as an alternative form of energy storage, if the scale and production capacity can be matched to regional variabilities in electric power supply. Previously, it was shown that stationary fuel cells integrated with energy storage and demand control techniques can reduce grid instability.⁵¹ Due to the significant costs of creating new electrical transmission capability, and losses in transmission, CNLF production plants would likely be placed near to sources of renewable power, and the fuels would be shipped to consumers at lower cost by truck, rail or pipeline. While the primary goal of this program is the production and conversion of CNLFs for

transportation, future applications in long term storage for support of the electric power system can also be envisioned.⁵²

Summary

The technical approach of the **REFUEL** program is to develop novel cost- and energy-efficient technologies for generation of energy-dense liquid fuels from renewable energy, water, and air, and their subsequent conversion to deliverable power for transportation and distributed generation.

This approach will allow use of existing liquid fuel transportation technologies for transferring renewable energy from remote or stranded locations to the end-use customer instead of using electricity or hydrogen (schematically represented in Figure 1). Renewable energy such as electricity from solar and wind farms, will be converted to a CNLF (technologies of interest in Category 1), transported by existing methods, and converted via direct (electrochemical in a fuel cell) or indirect (via intermediate hydrogen extraction) oxidation at the point of use (technologies of interest in Category 2). Conceptually this program aims to minimize system level carbon emissions, and electrical transmission and storage losses, while remaining cost competitive.

The target CNLFs can be indefinitely stored in the liquid state under moderate pressure (up to 20 bar) or moderate cooling (down to -40 °C), can be transported using existing or easily expanded and modified infrastructure, and converted back into electricity and/or heat. The conversion products (primarily N₂, H₂O, and CO₂) are not captured and are released to the atmosphere. Fuels containing carbon are acceptable as long as the carbon is taken directly from air or other sustainable sources such as biomass fermentation and not from fossil fuels.

Generation of liquid fuels and their conversion to energy is currently not efficient and is economical only at large scale. To fully exploit the advantages of liquid fuels, it is therefore necessary to: (1) minimize production and conversion losses and make these processes scalable to small or medium sizes that match the scale of renewable generation; and (2) to use the existing infrastructure technologies, which is comprised of pipelines, railroads, tanker trucks, ships, terminals, as well as above- and below-ground storage. Developing technologies that work at a scale matching renewables generation and minimizing transportation/transmission and delivery costs creates opportunities for increased renewables deployment.

D. <u>PROGRAM OBJECTIVES</u>

The overall objective of the *REFUEL* program is to develop novel, cost-effective technologies to create carbon-neutral liquid fuels (CNLFs) from water and air, using renewable electricity, and

⁵² Melaina, M. and Eichman, J., "Hydrogen Energy Storage: Grid and Transportation Services", NREL report NREL/TP-5400-62518 (2015).

subsequently convert the CNLFs to power for transportation. If successful, the program outcomes will transform the way renewable electricity is stored and transported from remote generation sites to the end point customer. These changes will increase utilization of intermittent renewable energy and reduce carbon emissions.

The first specific objective of this FOA is to seek cost-effective and energy-efficient technologies for generation of energy-dense liquid fuels from renewable energy, water and air. These technologies should be scalable and match the scale of renewable energy generation, such as wind farms or solar arrays, and be tolerant to the uncertain and variable nature of renewable energy sources. For the purpose of this FOA, the appropriate scale for CNLF production is 150 MW of renewable energy, which matches a single mid-size solar/wind farm or combination of several renewable sources to increase the capacity factor. This size represents both scalability and compatibility with renewable resources. The resulting fuels should be transportable using liquid fuel infrastructure (already built or which can be built with known and already deployed technologies), and stored and dispensed as a liquid.

The second specific objective of this FOA is to develop efficient methods for the conversion of CNLFs to electricity or hydrogen (as an energy carrier for zero-emission vehicles). The only products of such conversion should be water and N₂ thus creating a net zero-carbon process; in the case of carbon containing fuels, CO₂ emissions are allowed as long as equal amounts are captured from air or other sustainable sources during the synthesis process.

The cost analysis needs to consider the entire value chain from generation through distribution to use. The cost targets for this FOA are selected in order to be disruptive with current state-ofthe-art and be competitive with projected methods of electricity and hydrogen transmission, distribution, storage and delivery. The cost metric includes costs of fuel production, transportation, storage, and conversion to electricity or hydrogen. A 750 mile transportation scenario is used in this FOA, which is similar to a TransWest Express, LLC project to deliver the wind power from Wyoming to California.⁵³ The proposed technologies should demonstrate the potential to achieve the cost of *source-to-use delivered* energy of below \$0.3/kWh to the enduser at target production volumes. This value is based on the analysis of cost structure for projected large scale fuel manufacturing processes using renewable energy and known conversion processes, such as ICE or fuel cell power generation. The parameters for the analysis are presented in Table 3. An illustrative example of the cost structure of source-to-use *delivered* energy (including production, transmission, storage and conversion costs) for carbonand nitrogen-based CNLFs compared to *projected* hydrogen vehicles and battery-electric vehicles (BEV)pathways is given in Figure 2 (cost assumptions are based on Table 3). If successful, the CNLF route will be more economical compared to other methods. The cost reduction potential for CNLFs and hydrogen comes from improving the production and conversion efficiencies (Figure 2), while for BEVs the battery cost is critical.

⁵³ <u>http://www.powercompanyofwyoming.com/about/docs/The-Anschutz-Corporation-Overview.pdf</u>

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

Only approximate calculations of the source-to-use delivered energy cost is required for the concept paper (CP) phase. Meeting or exceeding this target for small to medium scale processes is a great challenge, and can be addressed by improvements in fuel production or conversion or both. The ideal program outcome would be a suite of technology solutions that enable significantly reduced CO₂ emissions for transportation and increased penetration of renewables.

Table 3: Parameters for evaluation of the full costs of delivering transportation power usingcarbon-free energy sources.

Figure 2. An example of the cost structure of source-to-use delivered energy for different pathways of renewable energy delivery.⁵⁴

Beyond the specific objectives of the individual program categories, an additional objective of the **REFUEL** program is to create a research community, from various backgrounds and disciplines, united by the common theme of enabling widespread integration of renewable energy via the use of energy-dense liquid fuels. The fuels research is often conducted with a focus on either production or conversion. ARPA-E seeks to advance a research and development agenda in which *both* sides are considered and optimized to enable innovation in this area.

E. <u>TECHNICAL CATEGORIES OF INTEREST</u>

This program is focused on supporting chemistry and system concepts in energy transmission using CNLFs in one or both of the following categories:

- CATEGORY 1: Small- and medium-scale synthesis of energy-dense carbon-neutral liquid fuels using water, air, and renewable energy source
- CATEGORY 2: Electrochemical processes for generation of hydrogen or electricity from energy-dense carbon-neutral liquid fuels

The full impact of the **REFUEL** program will only be realized by linking these two categories and therefore *ARPA-E strongly encourages applications that address both categories.* For example, if proposing electrochemical production of a fuel, it is encouraged to also propose the electrochemical conversion of that fuel to electricity or hydrogen. Importantly, applications in

⁵⁴ The parameters used for the source-to-use cost calculation are presented in Table 3.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

Category 1 proposing the synthesis of a novel fuel for which there is no commercially accepted method for manufacturing and conversion to electricity or hydrogen are strongly encouraged to also propose an approach for the conversion of that fuel to electricity or hydrogen, i.e. must address both Category 1 and Category 2. If only Category 1 is proposed in this case, the Applicant must provide a reasonable explanation of how a conversion process for the fuel could be developed.

Category 1:

The final deliverable for Category 1 is a laboratory prototype that can be scaled to a costcompetitive small- to medium-scale synthesis of energy-dense CNLFs using air, water, and renewable power such as wind and solar. Some possible CNLFs are commercially available (e.g. ammonia) and are produced over thousands of tons per year using thermochemical methods. In this program, production using new approaches based on the use of renewable energy as well as novel fuels or fuel compositions may be developed. All CNLFs have to be responsive to this FOA in the terms of physical properties, energy density, handling, and conversion to electricity and fuels as defined in the technical targets section and metrics tables below. For example, a proposed fuel should be liquid over a practical range of temperatures, stable for an indefinite period of time, and compatible with existing methods and infrastructure for liquid storage and transportation. The required purity of fuels depends on the fuel type as well as on the application and this metric has to be defined by an Applicant and expressed in terms of content of the main component and the maximum concentration of individual impurities that have or may have a deleterious effect on the fuel use. A proposed fuel must have a high autoignition point (>200 °C) to ensure its safe use.

The synthesis of energy-dense CNLFs must be economical at small- to medium-scales to match the deployment of renewable power generation. This scale will require new methods to synthesize energy-dense fuels and innovative designs of chemical (*Subcategory 1A*) or electrochemical (*Subcategory 1B*) reactors. The current thermochemical production scale, e.g. Haber-Bosch synthesis of ammonia, is too large for the deployable scale of renewables (from 1 – 2 MW to 100 – 150 MW). The conventional process scales down poorly: the production cost increases from \$325/ton NH₃ (at the natural gas price \$5/MMBtu) for the production scale of 516,000 ton/year to \$545 to \$983 with decreasing the scale to 50,000 to 3,400 tons per year.⁵⁵ To match the capacity of the majority of new renewable energy installations (ca. 80 – 350 MW with average size of 90 MW (in 2009) for wind farms and 150 MW for solar PV plants),⁵⁶ fuel production plants should be a capable of generating around 10 – 25 ton NH₃/hr at peak power with demonstrated energy consumption (Table 1). This scale is substantially smaller than a

 ⁵⁵Maung, T. et al., "Economics of Using Flared vs. Conventional Natural Gas to Produce Nitrogen Fertilizer: A Feasibility Analysis", North Dakota State University (2012): <u>http://purl.umn.edu/133410</u>
 ⁵⁶ Wiser, R., Bolinger, M., "Wind Technologies Market Report", LBNL (2015), <u>https://ilsr.org/us-wind-projects-get-</u>

bigger-building-not-adding-turbines

typical Haber-Bosch plant, which generates 50 – 125 ton NH₃/hr in steady state,⁵⁷ and therefore represents a substantial challenge.

The production method should also be tolerant to intermittent energy supply, i.e. it should effectively operate at variable rates of production. For both existing commercial and newly-proposed fuels, both new synthetic methods and improvements to existing synthetic methods will be considered. Proposed synthetic methods must lead to a reduction of energy consumption and/or production cost. The proposed manufacturing methods may include known processes, e.g. intermediate hydrogen production by water electrolysis, though direct, one-pot synthetic methods are preferable. Only direct electrochemical conversion of CO₂ to CNLFs that can be directly used in fuel cells or in ICEs will be considered (*Subcategory 1B*).

The production cost for the proposed technology should be calculated using the input electricity price of \$0.05/kWh. For Applicants solely addressing Category 1, the total cost of delivered energy should be calculated using documented costs for fuel storage, transportation, and proposed use. For the concept paper, reasonable approximate values, as provided in Table 3, may be used. Input and output energy values should be used to calculate overall efficiency.

Examples of technical approaches include but are not limited to:

- High energy density fuels Areas of particular interest are nitrogen-based fuels, e.g. ammonia, hydrazine hydrate and its derivatives including scaling down an air separation process; carbon containing fuels based on CO₂ capture from air or other sustainable sources thus enabling zero-carbon cycle, e.g. hydrocarbons or stable, non-corrosive oxygenates that can be used as a fuel for ICEs or fuel cells and be produced by direct electrochemical or thermochemical (one-pot) reaction.
- Novel methods for synthesis of known energy-dense liquid fuels Areas of particular interests are direct electrochemical and thermochemical methods for synthesizing CNLFs that use water as a hydrogen sources instead of molecular hydrogen, and effective catalytic methods for hydrogen generation that allow for substantial decrease of operating pressures and temperatures.
- Innovative design of electrochemical and catalytic reactors operating at moderate pressure and temperatures and providing high yield per pass/volume and selectivity; membrane reactors that allow removal or supply of reactants thus shifting the equilibrium.
- Catalysts, electrocatalysts and materials to enable fuel synthesis.

Category 2:

The final deliverable for Category 2 is a prototype that demonstrates efficient and cost-effective technologies for conversion of CNLFs to hydrogen to be used in H₂ refueling stations (*Subcategory 2A*) or directly to electricity for mobile applications (*Subcategory 2B*). The

⁵⁷ Giddey, S., et al, Int. J. Hydrogen Energy (2013) 38, 14576.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

prototype must be scalable to an economically viable conversion for use in light, medium and heavy duty vehicles.

In *Subcategory 2A*, to enable hydrogen refueling stations, it is necessary to generate hydrogen from a CNLF on demand with high yield and sufficient purity for use in commercial PEM fuel cells. Storing hydrogen in the form of a liquid fuel with hydrogen density greater than liquid hydrogen will reduce the cost and footprint of current hydrogen storage. CNLF decomposition that occurs at lower temperatures could decrease energy requirements for decomposition and enable smaller heat exchangers, leading to lower system costs. To achieve this goal, it is necessary to develop more active and less expensive catalysts. Delivery of H₂ at an elevated pressure will reduce the energy spent on compression. Development of modular system designs, e.g. several modules comprising smaller cracking reactors and compressors, could potentially greatly improve reliability of the refueling stations.

Direct conversion of CNLFs to electricity is the subject of **Subcategory 2B**. Liquid fuels (e.g. methanol, NH_3) can be used in low temperature (PEM, alkaline exchange membrane (AEM)) and high temperature (SOFC) fuel cells. Although the use of such fuels in fuel cells is well known, current technologies have low conversion and selectivity and are expensive. One of the major problems is the lack of active, selective and inexpensive electrocatalyst for anode reactions that limits current density and efficiency, and increases the stack cost. One possible solution is reforming (internal fuel cracking) to hydrogen, which is easier to oxidize. Another problem to be addressed is insufficient membrane conductivity leading to low power and therefore oversized stack cost, and, for low temperature fuel cells, low selectivity causing fuel crossover and reducing the fuel cell efficiency. Crossover is less pronounced for AEMs but they have the additional issue of low thermal stability. All types of fuel cells have the shared problem of sluggish kinetics for the oxygen reduction reaction (ORR) at the cathode, which is more pronounced for PEM FCs with acidic membranes and is less problematic for AEM fuel cells. In addition to development of more effective anode electrocatalysts and membranes, substantial improvements may be reached via novel electrode and cell design and better system integration. A separate ARPA-E program, Integration and Optimization of Novel Ion Conducting Solids (IONICS), has one Technical Category focusing exclusively on ex-situ testing of AEMs. . In the IONICS program full cells will not be made and tested. In **REFUEL**, however, submissions to *Subcategory 2B* must propose full cells that meet the metrics defined below.

For Applicants solely addressing Category 2, the total cost of delivered energy should be calculated using documented costs for the carbon-neutral generation (using renewable energy), storage, and transportation of the fuels to be used. Input and output energy values should be used to calculate overall efficiency.

Examples of technical approaches for Category 2 include but are not limited to:

• High and intermediate temperature fuel cells for electricity generation directly from CNLF's - Areas of particular interest are approaches to novel, high power density electrode

architectures; oxygen- or proton-conducting solid electrolytes; direct use of liquid fuels without ex-situ reforming; using non-platinum group metal catalysts; materials and device designs for long life fuel-air systems; integrated systems for combined heat and power generation.

- Ambient temperature fuel cells for electricity generation directly from CNLF's Areas of particular interest are approaches to novel high power density membrane-electrode assemblies using anion exchange membranes; direct use of liquid fuels without reforming; using non-platinum group metal catalysts; system integration.
- Hydrogen generation systems for hydrogen refueling stations Areas of particular interest are approaches to low temperature thermal catalytic cracking; electrochemical decomposition; high pressure delivery, electrochemical hydrogen compression.

The ideal project team will have engineering and scientific expertise in every aspect of the fuel production and/or conversion system design and a good understanding of catalysis, electrochemistry, material properties, energy storage systems, and catalytic or electrochemical reactor design. This teaming arrangement is especially important for projects focused on novel fuels because any claim of potential benefit requires a thorough understanding of their possible use for electricity or hydrogen generation and system design requirements. The team needs to have the necessary expertise in fuel and fuel cell manufacturing, though ARPA-E does not require the participation of the established industrial manufacturers.

F. <u>Technical Performance Targets</u>

Proposed technical plans must show a well-justified, realistic potential for the technology to meet or exceed the **REFUEL** cost targets for source-to-use energy or hydrogen. To achieve this goal, the detailed Technical Performance Targets described below should be met. If an Applicant applies for both Categories 1 and 2, then some trade-offs between Category Technical Performance Targets for different process efficiencies may be considered. The final research objective for projects funded under this FOA is a fully functional prototype, specific for each subcategory (see Tables below), that credibly demonstrates all technical targets. The minimum prototype size, which is different for each subcategory, has been chosen by ARPA-E so that the results from the performance tests, as defined below, can be readily used to predict the performance, life-time, and cost of the proposed systems.

The cost of *source-to-use* electrical energy (in \$/kWh) is defined as the sum of CNLF production (technologies described in Category 1), transportation, storage, and conversion to electricity (technologies described in Category 2). A clear justification of the potential to deliver a total cost of source-to-use energy below \$0.3/kWh must be provided for the application to be considered. The scale of fuel production plant for this cost estimation should be 150MW. It is anticipated that several technical approaches are capable of meeting this target, and preference will be given to submissions that have demonstrated a potential to be substantially lower in the cost. Specific technical targets presented below are set to ensure that the overall vision may be realized and should be addressed in the application.

Concept Papers must include evaluation of the source-to-use delivered energy cost. If applying only to Category 1 then the Applicant should use literature values for cost of conversion technologies appropriate to the proposed fuel. If applying only to Category 2, then the Applicant should use literature values for the carbon-free production cost of the input fuel. *For simplicity, in the Concept Paper phase, transmission and storage costs for the calculation should be assumed to be* \$0.02/kWh *for any CNLF*. A more detailed cost calculation with references and stated assumptions will be required in the Full Application phase, at which point additional guidance will be provided. All proposed technologies have to be nearly zero-carbon, e.g. release no more than 50 g CO² from auxiliary processes per kWh produced energy.

SUE Cost Estimation for Full Applications

Full Applications must include detailed estimation of the source-to-use delivered energy cost. The results must be presented in a Cost Analysis Workbook and in the technical volume (explain the SUE Cost Calculation by providing a screenshot of the summary Cost Calculation spreadsheet tab). If applying only to Category 1 then the Applicant should use literature values for cost of conversion technologies appropriate to the proposed fuel. If applying only to Category 2, then the Applicant should use literature values for the carbon-free production cost of the input fuel. All proposed technologies must be nearly zero-carbon, e.g. release no more than 50 g CO₂ from auxiliary processes per kWh produced energy.

The following example values can be used in calculation of the SUE cost: If the proposed technology does not include capturing feedstock from air, the feedstock cost should be assumed as \$40/ton for N₂⁵⁸ and \$250/ton for CO2.⁵⁹ Energy input required for H₂ production by water electrolysis by current technologies should be assumed as 49.2 kWh/kg H₂.⁶⁰ For fuel production technologies, a lifetime of 25 years must be assumed, with a capacity factor of 32.5% for wind, 28.6% for PV solar, and 22.7% for thermal solar.⁶¹ For conversion technologies, a lifetime of 15 years must be assumed, with a capacity factor of 65%, assuming the storage tanks can be appropriately oversized to supply continuous fuel input. Fuel transportation cost (CT) must be calculated based on the value of \$0.053/L for CNLF liquid at ambient conditions and \$0.057/L for liquefied gases. Fuel storage cost (CS) must be calculated based on the value of \$0.0026/L for CNLF liquid at ambient conditions and \$0.061/L for liquefied gases.⁶² Unless a

Bartels, J. R., "A feasibility study of implementing an Ammonia Economy" (2008). Iowa State University, Graduate Theses and Dissertations. Paper 11132.

part of developing technology, the cost of electrochemical cell systems should be assumed as \$1600/kW for low temperature systems and \$1700/kW for high temperature systems at power density of 410 mW/cm² and 290 mW/cm² respectively.⁶³ If the proposed technology requires different values than those stated above, Applicants must mark the related cells in color and provide suitable references to justify.

Applicants are strongly encouraged to use the REFUEL Cost Analysis Workbook, which is intended to serve as a template for the Applicant to detail the experimental evidence, literature references, and calculations used to determine the proposed cost of source-to-use energy at scale (in \$/kWh). For illustration purposes only, the Workbook is provided containing data for ammonia CNLF, which the Applicants should replace with data specific to their proposed technologies.

Whether or not Applicants choose to use the Workbook, Applicants must provide their team name, the fuel they are developing or using and its energy density, costs of fuel production, transportation, storage and conversion on a summary page. Applicants must also enter data for implementing the proposed technology at scale of 150 MW of input energy. Hydrogen production cost (Subcategory 2a) must be calculated for 1000 kg/day scale. If there is no available data on SUE cost components the Applicant is expected to provide literature data (marked in color) or describe the assumptions made to generate the cost metrics and provide any calculations in a separate spreadsheet tab. Use of built-in Microsoft Excel functions are acceptable, however, add-in functions or software not provided with OEM Microsoft Excel installations are not permitted. When experimental or reference values are provided, clearly notate the source and relevant assumptions.

Category 1:

The following metrics apply to all projects in Category 1 (see subcategory targets for additional metrics):

ID	Description	Target
1.1	Fuel cost on primary energy basis at 150MW scale	< \$0.13/kWh
1.2	Fuel energy density	> 3.5 kWh/L
1.3	Storage temperature	above -40°C1
1.4	Storage pressure	below 20 bar ²
1.5	Autoignition point	> 200 °C
1.6	Liquid fuel viscosity	< 100 Centipoise
1.7	CO- released in fuel production	< 50g CO ₂ /kWh of fuel
	CO ₂ released in ruei production	energy content

¹ – at ambient pressure

² – at ambient temperature

⁶³ James, B.D. and DeSantis D.A. "Manufacturing Cost and Installed Price Analysis of Stationary Fuel Cell Systems" (<u>https://www.sainc.com/service/SA%202015%20Manufacturing%20Cost%20and%20Installed%20Price%20of%20S</u> tationary%20Fuel%20Cell%20Systems.pdf)

Subcategory 1A is comprised of chemical (catalytic) synthesis of energy-dense CNLFs based on hydrogen produced from water splitting and innovative designs of chemical reactors. The following metrics apply to projects in subcategory 1A:

Specific to subcategory 1A: Chemical production				
ID	Description	Target		
1A.1	Reaction rate	> 7x10 ⁻⁷ mol cm ⁻² s ⁻¹		
1A.2	Final prototype productivity	> 1 kg CNLF/day		
1A.3	Total production energy efficiency	> 60%		
1A.5	Fuel synthesis efficiency	> 86%		
1A.6	Fuel purity	> 99%		

Subcategory 1B is comprised of electrochemical and thermochemical synthesis of energy-dense CNLFs using water and innovative designs of electrochemical reactors and thermochemical systems. The following metrics apply to projects in subcategory 1B:

Specific to subcategory 1B: Electrochemical production				
ID	Description	Target		
1B.1	Current density for electrochemical production	> 300 mA/cm ²		
1B.2	Final prototype productivity	> 100 g CNLF/day		
1B.3	Coulombic efficiency	> 90%		
1B.4	Production energy efficiency	> 60%		
1B.5	Degradation rate	0.3%/1000 hrs		
1B.6	Fuel purity	> 99%		

End-of-project deliverables:

Both subcategories have to deliver a detailed techno-economic analysis based on a comprehensive model meeting all of the technical targets and demonstrate a pathway to the CNLF cost target at a scale of 150 MW input energy.

Subcategory 1A: Demonstration of a bench scale reactor producing a CNLF at >1 kilogram per day.

Subcategory 1B: Demonstration of a short stack prototype producing a CNLF at >100 gram per day.

Any application proposing the synthesis of a novel fuel for which there is no commercially accepted method for manufacturing should indicate a technical path and use reasonable

conversion cost for conversion to electricity or hydrogen. In this case Applicants are strongly encouraged to submit to Categories 1 and 2 and to meet all relevant metrics.

Supplemental Explanation of Category 1 Performance Targets:

1.1 See the full explanation in the overview of this Section.

1A.1 Proposed manufacturing process of a CNLF should be tolerant to intermittent nature of renewables. The process should be demonstrated with a prototype reactor at a kg/day scale in a continuous (500 hours) operation with at least 5 interruptions designed to test the effect of intermittency in power supply.

1A.3 Total production energy efficiency is defined as the ratio of CNLF primary energy to total consumed energy when water is used as hydrogen source.

1A.4 Fuel synthesis efficiency is defined as the ratio of primary energy to consumed energy when a CNLF is synthesized using hydrogen.

1B.1 Proposed manufacturing process of a CNLF should be tolerant to intermittent nature of renewables. The process should be demonstrated with a prototype reactor at a kg/day scale that operates for 500 hours continuously with at least 5 on/off cycles.

- **1B.4** Production efficiency is defined as the ratio of theoretical process energy to consumed energy.
- **1B.5** Degradation is defined as the increase in cell voltage at the target current density.

Category 2:

Subcategory 2A is comprised of hydrogen generation from CNLFs using thermal or electrochemical pathways and innovative reactor design. The following metrics apply to projects in subcategory 2A:

Subcategory 2A: Hydrogen generation				
ID	Description	Target		
2A.1	Hydrogen delivered cost at target pressure	< \$4.5/kg		
2A.2	Final prototype size	10 L H ₂ /min		
2A.3	Hydrogen generation rate	> 0.15 g H ₂ /h/cm ³		
2A.4	Conversion to hydrogen	> 99%		
2A.5	Energy efficiency	> 80%		
2A.6	Maximum cracking reactor temperature	450 °C		
2A.7	Hydrogen delivered pressure	30 bar		
2A.8	Life time (projected)	10 yrs		
2A.9	Concentration of catalyst poisoning impurities	< 100 ppb		

Subcategory 2B: Direct use of fuel				
ID	Description	Target ^a		
2B.1	Delivered source-to-use energy cost target	< \$0.3/kWh		
2B.2	Final prototype size	50 W		
2B.3	Maximum operating temperature	650 °C		
2B.4	Current density at 0.75 V	> 300 mA/cm ²		
2B.5	Electrical efficiency@ 25% of rated power	> 55%		
2B.6	Minimum continuous stack testing time	500 hours		

Subcategory 2B is comprised of electricity generation from CNLFs using electrochemical fuel cells and innovative cell design. The following metrics apply to projects in subcategory 2B:

^a – For more guidance on system requirements see DOE Fuel Cell Technical Team Roadmap (2013), <u>http://energy.gov/sites/prod/files/2014/02/f8/fctt_roadmap_june2013.pdf</u> (mobile applications) and DOE Solid State Energy Conversion Alliance (SECA) program, <u>http://www.netl.doe.gov/research/on-site-</u> <u>research/research-portfolio/coal-research/seca-index</u> (stationary applications)

< 0.3% per 1,000 hours

End-of-project deliverables:

2B.7

Both subcategories have to deliver a detailed techno-economic analysis based on a comprehensive model meeting all of the targets.

Power degradation rate

Subcategory 2A: Demonstration of a bench scale cracking reactor or electrochemical cell stack producing H₂ from a CNLF at greater than 100 grams per day.

Subcategory 2B: Demonstration of a short stack prototype of at least 50 W and consisting of at least 3 cells with a total working area greater than 250 cm². The fuel must be fed directly to the anode; concepts that propose an external fuel processing unit will not be considered for selection.

Supplemental Explanation of Category 2 Performance Targets:

2A.1 See the full explanation in the overview of the Technical Targets section.

2A.3 Conversion to hydrogen is defined as the percentage of extracted hydrogen from containing in a CNLF.

2A.4 Energy efficiency (EE) is defined as EE = P/(P+E) where P is the primary energy of extracted hydrogen and E is energy consumed for the conversion process.

2A.7 Testing time for the projects will be 500 hours.

2A.8 Concentration of ammonia or other fuel cell catalyst poisoning gases in generated hydrogen should be less than 100 ppb for its direct use in a PEM fuel cell.

2B.1 See the full explanation in the overview of the Technical Targets section.

2B.5 Electrical efficiency is defined as the ratio of produced electrical energy to primary energy of a CNLF.

2B.7 Degradation is defined as the decrease in fuel cell voltage at the target current density

II. AWARD INFORMATION

A. <u>Award Overview</u>

ARPA-E will accept only new applications under this FOA. Applicants may not seek renewal or supplementation of their existing awards through this FOA.

ARPA-E expects to make approximately \$5 million available for new awards under this FOA, subject to the availability of appropriated funds. ARPA-E anticipates making approximately 3-5 awards under this FOA. ARPA-E may, at its discretion, issue one, multiple, or no awards.

Applicants must apply for a Combined Phase I/II/IIS Award. Combined Phase I/II/IIS Awards are intended to develop transformational technologies with disruptive commercial potential. Such commercial potential may be evidenced by (1) the likelihood of follow-on funding by private or non-SBIR/STTR sources if the project is successful, or (2) the Small Business Concern's record of successfully commercializing technologies developed under prior SBIR/STTR awards. Phase IIS awards are a "sequential" (i.e., additional) Phase II award, intended to allow the continued development of promising energy technologies. Combined Phase I/II/IIS awards may be funded up to \$3,225,000 and may have a period of performance up to 48 months (4 years).

ARPA-E reserves the right to select all or part of a proposed project (i.e. only Phase I, or only Phase I and Phase II). In the event that ARPA-E selects Phase I only or Phase I/II only, then the maximum award amount for a Phase I award is \$225,000 and the maximum amount for a Phase I/II award is \$1,725,000.

The period of performance for funding agreements may not exceed 48 months. ARPA-E expects the start date for funding agreements to be April 1, 2017, or as negotiated.

B. ARPA-E FUNDING AGREEMENTS

ARPA-E generally uses Cooperative Agreements to provide financial and other support to Prime Recipients.⁶⁴

Cooperative Agreements involve the provision of financial or other support to accomplish a public purpose of support or stimulation authorized by Federal statute. Under Cooperative Agreements, the Government and Prime Recipients share responsibility for the direction of projects.

⁶⁴ The Prime Recipient is the signatory to the funding agreement with ARPA-E.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

Phase I will be made as a fixed-amount award. Phase II and Phase IIS of Combined Phase I/II/IIS awards will be made on a cost-reimbursement basis.

ARPA-E encourages Prime Recipients to review the Model Cooperative Agreement for SBIR/STTR Awards, which is available at <u>http://arpa-e.energy.gov/?q=arpa-e-site-page/award-guidance-sbir-sttr</u>.

C. STATEMENT OF SUBSTANTIAL INVOLVEMENT

ARPA-E is substantially involved in the direction of projects from inception to completion. For the purposes of an ARPA-E project, substantial involvement means:

- Project Teams must adhere to ARPA-E's agency-specific and programmatic requirements.
- ARPA-E may intervene at any time in the conduct or performance of work under an award.
- ARPA-E does not limit its involvement to the administrative requirements of an award. Instead, ARPA-E has substantial involvement in the direction and redirection of the technical aspects of the project as a whole.
- During award negotiations, ARPA-E Program Directors and Prime Recipients mutually establish an aggressive schedule of quantitative milestones and deliverables that must be met every quarter. In addition, ARPA-E will negotiate and establish "Go/No-Go" milestones for each project. If the Prime Recipient fails to achieve any of the "Go/No-Go" milestones or technical milestones and deliverables as determined by the ARPA-E Contracting Officer, ARPA-E may at its discretion renegotiate the statement of project objectives or schedule of technical milestones and deliverables for the project. In the alternative, ARPA-E may suspend or terminate the award in accordance with 2 C.F.R. §§ 200.338 and 200.339.
- ARPA-E may provide guidance and/or assistance to the Prime Recipient to accelerate the commercial deployment of ARPA-E-funded technologies. Guidance and assistance provided by ARPA-E may include coordination with other Government agencies and nonprofits to provide mentoring and networking opportunities for Prime Recipients. ARPA-E may also organize and sponsor events to educate Prime Recipients about key barriers to the deployment of their ARPA-E-funded technologies. In addition, ARPA-E may establish collaborations with private and public entities to provide continued support for the development and deployment of ARPA-E-funded technologies.
III. ELIGIBILITY INFORMATION

A. **ELIGIBLE APPLICANTS**

1. SBIR ELIGIBILITY

SBA rules and guidelines govern eligibility to apply to this FOA. For information on program eligibility, please refer to SBA's "Guide to SBIR/ STTR Program Eligibility" available at http://sbir.gov/sites/default/files/elig_size_compliance_guide.pdf.

A Small Business Concern⁶⁵ may apply as a Standalone Applicant⁶⁶ or as the lead organization for a Project Team.⁶⁷ If applying as the lead organization, the Small Business Concern must perform at least 66.7% of the work in Phase I and at least 50% of the work in Phase II and Phase IIS, as measured by the Total Project Cost.⁶⁸

For information on eligibility as a Small Business Concern, please refer to SBA's website (<u>https://www.sba.gov/content/am-i-small-business-concern</u>).

2. STTR ELIGIBILITY

SBA rules and guidelines govern eligibility to apply to this FOA. For information on program eligibility, please refer to SBA's "Guide to SBIR/ STTR Program Eligibility" available at http://sbir.gov/sites/default/files/elig_size_compliance_guide.pdf.

Only a Small Business Concern may apply as the lead organization for a Project Team. The Small Business Concern must perform at least 40% of the work in Phase I, Phase II, and/or Phase IIS, as measured by the Total Project Cost. A single Research Institution must perform at least 30% of the work in Phase I, Phase II, and/or Phase IIS, as measured by the Total Project Cost. Please refer to Section III.B.1 of the FOA for guidance on Research Institutions' participation in STTR projects.

⁶⁸ The Total Project Cost is the sum of the Prime Recipient share and the Federal Government share of total allowable costs. The Federal Government share generally includes costs incurred by GOGOs, FFRDCs, and GOCOs.

⁶⁵ A Small Business Concern is a for-profit entity that: (1) maintains a place of business located in the United States; (2) operates primarily within the United States or makes a significant contribution to the United States economy through payment of taxes or use of American products, materials or labor; (3) is an individual proprietorship, partnership, corporation, limited liability company, joint venture, association, trust, or cooperative; and (4) meets the size eligibility requirements set forth in 13 C.F.R. § 121.702. Where the entity is formed as a joint venture, there can be no more than 49% participation by foreign business entities in the joint venture.

⁶⁶ A "Standalone Applicant" is an Applicant that applies for funding on its own, not as part of a Project Team.
⁶⁷ The term "Project Team" is used to mean any entity with multiple players working collaboratively and could encompass anything from an existing organization to an ad hoc teaming arrangement. A Project Team consists of the Prime Recipient, Subrecipients, and others performing or otherwise supporting work under an ARPA-E funding agreement.

For information on eligibility as a Small Business Concern, please refer to SBA's website (<u>https://www.sba.gov/content/am-i-small-business-concern</u>).

3. JOINT SBIR AND STTR ELIGIBILITY

An Applicant that meets both the SBIR and STTR eligibility criteria above may request both SBIR and STTR funding if:

- The Small Business Concern is partnered with a Research Institution
- The Small Business Concern performs at least 66.7% of the work in Phase I and at least 50% of the work in Phase II and/or Phase IIS (as applicable), as measured by the Total Project Cost
- The partnering Research Institution performs 30-33.3% of the work in Phase I and 30-50% of the work in Phase II and/or Phase IIS (as applicable), as measured by the Total Project Cost
- The Principal Investigator (PI) is employed by the Small Business Concern. If the PI is employed by the Research Institution, submissions will be considered only under the STTR program

B. <u>ELIGIBLE SUBRECIPIENTS</u>

1. RESEARCH INSTITUTIONS

A Research Institution⁶⁹ may apply only as a member of a Project Team (i.e., as a Subrecipient to a Small Business Concern). In STTR projects, a single Research Institution must perform at least 30%, but no more than 60%, of the work under the award in Phase I, Phase II, and/or Phase IIS (as applicable), as measured by the Total Project Cost.

⁶⁹ Research Institutions include FFRDCs, nonprofit educational institutions, and other nonprofit research organizations owned and operated exclusively for scientific purposes. Eligible Research Institutions must maintain a place of business in the United States, operate primarily in the United States, or make a significant contribution to the U.S. economy through the payment of taxes or use of American products, materials, or labor.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email ExchangeHelp@hq.doe.gov (with FOA name and number in subject line).

2. OTHER PROJECT TEAM MEMBERS

The following entities are eligible to apply for SBIR/STTR funding as a member of a Project Team (i.e., as a Subrecipient to a Small Business Concern):

- For-profit entities, including Small Business Concerns
- Nonprofits other than Research Institutions⁷⁰
- Government-Owned, Government Operated laboratories (GOGOs)
- State, local, and tribal government entities
- Foreign entities⁷¹

In SBIR projects, Project Team members other than the lead organization, including but not limited to Research Institutions, may collectively perform no more than 33.3% of the work under the award in Phase I and no more than 50% of the work under the award in Phase II and/or Phase IIS. This includes efforts performed by Research Institutions.

In STTR projects, Project Team members (other than the lead organization and the partnering Research Institution) may collectively perform no more than 30% of work under the award in Phase I, Phase II, and/or Phase IIS.

C. <u>ELIGIBLE PRINCIPAL INVESTIGATORS</u>

1. SBIR

For the duration of the award, the PI for the proposed project (or, if multiple PIs, at least one PI) must be employed by, and perform more than 50% of his or her work for, the Prime Recipient. The Contracting Officer may waive this requirement or approve the substitution of the PI after consultation with the ARPA-E SBIR/STTR Program Director.

For projects with multiple PIs, at least one PI must meet the primary employment requirement. That PI will serve as the contact PI for the Project Team.

 ⁷⁰Nonprofit organizations described in section 501(c)(4) of the Internal Revenue Code of 1986 that engaged in lobbying activities after December 31, 1995 are not eligible to apply for funding as a Subrecipient.
 ⁷¹ All work by foreign entities must be performed by subsidiaries or affiliates incorporated in the United States (see Section IV.G.6 of the FOA). However, the Applicant may request a waiver of this requirement in the Business

Assurances & Disclosures Form submitted with the Full Application.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email ExchangeHelp@hq.doe.gov (with FOA name and number in subject line).

2. STTR

For the duration of the award, the PI for the proposed project (or, if multiple PIs, at least one PI) must be employed by, and perform more than 50% his or her work for, the Prime Recipient or the partnering Research Institution. The Contracting Officer may waive this requirement or approve the substitution of the PI after consultation with the ARPA-E SBIR/STTR Program Director.

For projects with multiple PIs, at least one PI must meet the primary employment requirement. That PI will serve as the contact PI for the Project Team.

D. <u>ELIGIBILITY OF PRIOR SBIR AND STTR AWARDEES: SBA BENCHMARKS ON PROGRESS</u> TOWARDS COMMERCIALIZATION

Applicants awarded multiple prior SBIR or STTR awards must meet DOE's benchmark requirements for progress towards commercialization before ARPA-E may issue a new Phase I award. For purposes of this requirement, Applicants are assessed using their prior Phase I and Phase II SBIR and STTR awards across all SBIR agencies. If an awardee fails to meet either of the benchmarks, that awardee is not eligible for an SBIR or STTR Phase I award and any Phase II award for a period of one year from the time of the determination.

ARPA-E applies two benchmark rates addressing an Applicant's progress towards commercialization: (1) the DOE Phase II Transition Rate Benchmark and (2) the SBA Commercialization Rate Benchmark:

 The DOE Phase II Transition Rate Benchmark sets the minimum required number of Phase II awards the Applicant must have received for a given number of Phase I awards received during the specified period. This Transition Rate Benchmark applies only to Phase I Applicants that have received more than 20 Phase I awards during the last five (5) year period, excluding the most recently completed fiscal year. DOE's Phase II Transition Rate Benchmark requires that 0.25 of all Phase I awards received over the past five years transition to Phase II awards.

The SBIR/STTR Phase II transition rates and commercialization rates are calculated using the data in the SBA's TechNet database. For the purpose of these benchmark requirements, awardee firms are assessed once a year, on June 1st, using their prior SBIR and STTR awards across all agencies. SBA makes this tabulation of awardee transition rates and commercialization rates available to all federal agencies. ARPA-E uses this tabulation to determine which companies do not meet the DOE benchmark rates and are, therefore, ineligible to receive new Phase I awards.

• The Commercialization Rate Benchmark sets the minimum Phase III⁷² commercialization results that an Applicant must have achieved from work it performed under prior Phase II awards (i.e. this measures an Applicant's progress from Phase II or Phase IIS to Phase III awards). This benchmark requirement applies only to Applicants that have received more than 15 Phase II awards during the last 10 fiscal years, excluding the two most recently completed fiscal years.

The current Commercialization Benchmark requirement, agreed upon and established by all 11 SBIR agencies, is that the Applicants must have received, to date, an average of at least \$100,000 of sales and/or investments per Phase II award received, <u>or</u> have received a number of patents resulting from the relevant SBIR work equal to or greater than 15% of the number of Phase II awards received during the period.

E. <u>COST SHARING</u>⁷³

Applicants are bound by the cost share proposed in their Full Applications. Specific cost-sharing requirements for this FOA are as follows:

1. PHASE I

Prime Recipients/Project Teams are not required to contribute cost share during Phase I of an SBIR/STTR award.

2. PHASE II AND IIS COST SHARE REQUIREMENT

For Phase II and Phase IIS, Prime Recipients must contribute cost share as follows:

• Small businesses – or consortia of small businesses - will provide 0% cost share from the outset of the Phase II project through the first 12 months of Phase II (referred to as the "Cost Share Grace Period"). If the project is continued beyond the Cost Share Grace Period, then at least 10% of the Total Project Cost⁷⁴ (including the costs incurred during the Cost Share Grace Period) will be required as cost share over the remaining period of performance.

⁷² SBIR Phase III refers to work that derives from, extends or completes an effort made under prior SBIR funding agreements, but is funded by sources other than the SBIR Program. Phase III work is typically oriented towards commercialization of SBIR research or technology. For more information please refer to the Small Business Administration's "Small Business Innovation Research (SBIR) Program Policy Directive" at https://www.sbir.gov/sites/default/files/sbir_pd_with_1-8-14 amendments 2-24-14.pdf.

⁷³ Please refer to Section VI.B.3-4 of the FOA for guidance on cost share payments and reporting.

⁷⁴ The Total Project Cost is the sum of the Prime Recipient share and the Federal Government share of total allowable costs. The Federal Government share generally includes costs incurred by GOGOs and FFRDCs.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

- Project Teams where a small business is the lead organization and small businesses perform greater than or equal to 80%, but less than 100%, of the total work under the funding agreement (as measured by the Total Project Cost) the Project Team are entitled to the same cost share reduction and Cost Share Grace Period as provided above to Standalone small businesses or consortia of small businesses.
- Project teams that do not meet any of the above criteria are subject to a minimum cost share requirement of 20%.

3. LEGAL RESPONSIBILITY

Although the cost share requirement applies to the Project Team as a whole, the funding agreement makes the Prime Recipient legally responsible for paying the entire cost share. The Prime Recipient's cost share obligation is expressed in the funding agreement as a static amount in U.S. dollars (cost share amount) and as a percentage of the Total Project Cost (cost share percentage). If the funding agreement is terminated prior to the end of the period of performance, the Prime Recipient is required to contribute at least the cost share percentage of total expenditures incurred through the date of termination.

The Prime Recipient is solely responsible for managing cost share contributions by the Project Team and enforcing cost share obligations assumed by Project Team members in subawards or related agreements.

4. COST SHARE ALLOCATION

Each Project Team is free to determine how much each Project Team member will contribute towards the cost share requirement. The amount contributed by individual Project Team members may vary, as long as the cost share requirement for the project as a whole is met.

5. COST SHARE TYPES AND ALLOWABILITY

Every cost share contribution must be allowable under the applicable Federal cost principles, as described in Section IV.G.1 of the FOA.

Project Teams may provide cost share in the form of cash or in-kind contributions. Cash contributions may be provided by the Prime Recipient or Subrecipients. Allowable in-kind contributions include but are not limited to personnel costs, indirect costs, facilities and administrative costs, rental value of buildings or equipment, and the value of a service, other resource, or third party in-kind contribution. Project Teams may use funding or property received from state or local governments to meet the cost share requirement, so long as the

funding or property was not provided to the state or local government by the Federal Government.

The Prime Recipient may <u>not</u> use the following sources to meet its cost share obligations:

- Revenues or royalties from the prospective operation of an activity beyond the period of performance;
- Proceeds from the prospective sale of an asset of an activity;
- Federal funding or property (e.g., Federal grants, equipment owned by the Federal Government); or
- Expenditures that were reimbursed under a separate Federal program.

In addition, Project Teams may not use independent research and development (IR&D) funds⁷⁵ to meet their cost share obligations under cooperative agreements.

Project Teams may not use the same cash or in-kind contributions to meet cost share requirements for more than one project or program.

Cost share contributions must be specified in the project budget, verifiable from the Prime Recipient's records, and necessary and reasonable for proper and efficient accomplishment of the project. Every cost share contribution must be reviewed and approved in advance by the Contracting Officer and incorporated into the project budget before the expenditures are incurred.

Applicants may wish to refer to 2 C.F.R. Parts 200 and 910, and 10 C.F.R Part 603 for additional guidance on cost sharing, specifically 2 C.F.R. §§ 200.306 and 910.130, and 10 C.F.R. §§ 603.525-555.

6. COST SHARE CONTRIBUTIONS BY FFRDCs AND GOGOS

Because FFRDCs are funded by the Federal Government, costs incurred by FFRDCs generally may not be used to meet the cost share requirement. FFRDCs may contribute cost share only if the contributions are paid directly from the contractor's Management Fee or a non-Federal source.

Because GOGOs/Federal Agencies are funded by the Federal Government, GOGOs/Federal Agencies may not provide cost share for the proposed project. However, the GOGO/Agency

⁷⁵ As defined in Federal Acquisition Regulation Section 31.205-18.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

costs would be included in Total Project Costs for purposes of calculating the cost-sharing requirements of the Applicant.

7. COST SHARE VERIFICATION

Upon selection for award negotiations, Applicants are required to provide information and documentation regarding their cost share contributions. Please refer to Section VI.B.3 of the FOA for guidance on the requisite cost share information and documentation.

F. <u>Other</u>

1. COMPLIANT CRITERIA

Concept Papers are deemed compliant if:

- The Applicant and the proposed Project Team members meet the eligibility requirements in Section III.A III.D of the FOA;
- The Concept Paper complies with the content and form requirements in Section IV.C of the FOA; and
- The Applicant entered all required information, successfully uploaded all required documents, and clicked the "Submit" button in ARPA-E eXCHANGE by the deadline stated in the FOA.

Concept Papers found to be noncompliant may not be merit reviewed or considered for award. ARPA-E will not review or consider noncompliant Concept Papers, including Concept Papers submitted through other means, Concept Papers submitted after the applicable deadline, and incomplete Concept Papers. A Concept Paper is incomplete if it does not include required information. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information and documents due to server/connection congestion.

Full Applications are deemed compliant if:

- The Applicant submitted a compliant and responsive Concept Paper;
- The Applicant and the proposed Project Team members meet the eligibility requirements in Section III.A III.D of the FOA;
- The Full Application complies with the content and form requirements in Section IV.D of the FOA; and

• The Applicant entered all required information, successfully uploaded all required documents, and clicked the "Submit" button in ARPA-E eXCHANGE by the deadline stated in the FOA.

Full Applications found to be noncompliant may not be merit reviewed or considered for award. ARPA-E will not review or consider noncompliant Full Applications, including Full Applications submitted through other means, Full Applications submitted after the applicable deadline, and incomplete Full Applications. A Full Application is incomplete if it does not include required information and documents, such as Forms SF-424 and Small Business Administration Company Registration Certificate. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information and documents due to server/connection congestion.

Replies to Reviewer Comments are deemed compliant if:

- The Applicant successfully uploads its response to ARPA-E eXCHANGE by the deadline stated in the FOA.
- The Replies to Reviewer Comments comply with the content and form requirements of Section IV.E of the FOA.

ARPA-E will not review or consider noncompliant Replies to Reviewer Comments, including Replies submitted through other means and Replies submitted after the applicable deadline. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information due to server/connection congestion. ARPA-E will review and consider each compliant and responsive Full Application, even if no Reply is submitted or if the Reply is found to be noncompliant.

2. **Responsiveness Criteria**

ARPA-E performs a preliminary technical review of Concept Papers and Full Applications. The following types of submissions, and those identified below in Section III.F.3 may be deemed nonresponsive and may not be reviewed or considered:

- Submissions that fall outside the technical parameters specified in this FOA.
- Submissions that have been submitted in response to other currently issued ARPA-E FOAs.
- Submissions that are not scientifically distinct from applications submitted in response to other currently issued ARPA-E FOAs.
- Submissions for basic research aimed solely at discovery and/or fundamental knowledge generation.
- Submissions for large-scale demonstration projects of existing technologies.

- Submissions for proposed technologies that represent incremental improvements to existing technologies.
- Submissions for proposed technologies that are not based on sound scientific principles (e.g., violates a law of thermodynamics).
- Submissions for proposed technologies that are not transformational, as described in Section I.A of the FOA.
- Submissions for proposed technologies that do not have the potential to become disruptive in nature, as described in Section I.A of the FOA. Technologies must be scalable such that they could be disruptive with sufficient technical progress.
- Submissions that are not scientifically distinct from existing funded activities supported elsewhere, including within the Department of Energy.
- Submissions that describe a technology but do not propose a R&D plan that allows ARPA-E to evaluate the submission under the applicable merit review criteria provided in Section V.A of the FOA.
- Submissions that do not provide sufficient information regarding the SUE cost to allow ARPA-E to evaluate the submission under the applicable merit review criteria provided in Section V.A of the FOA.

3. SUBMISSIONS SPECIFICALLY NOT OF INTEREST

Submissions that propose the following will be deemed nonresponsive and will not be merit reviewed or considered:

- Reversible liquid fuel generation (hydrogenation/dehydrogenation)
- Liquid hydrogen
- Fuels by conversion of fossil fuels (e.g. methane to liquid)
- Fuels by conversion of CO₂ generated from fossil fuels
- Fuels in the form of a slurry
- Carbon positive processes that exceed the Technical Performance Target
- Generation of fuels by biological or enzymatic methods
- Photochemical water splitting
- Fuels generating solid residues
- Systems with onboard fuel reforming
- Optimization and modification of combustion engines
- The use of fuels in microbial and enzymatic fuel cells
- Technologies for transportation and storage of liquid fuels
- Oxygen cathode improvements in fuel cells
- Blending of fuels
- Improvements in hydrogen/air fuel cells

4. LIMITATION ON NUMBER OF APPLICATIONS

ARPA-E is not limiting the number of applications that may be submitted by Applicants. Applicants may submit more than one application to this FOA, provided that each application is scientifically distinct.

However, small businesses that qualify as a "Small Business Concern" may apply to only one of the two ARPA-E REFUEL FOAs: ARPA-E FOA DE-FOA-0001563 (SBIR/STTR), Renewable Energy to Fuels through Utilization of Energy-dense Liquids (REFUEL SBIR/STTR), or ARPA-E FOA DE-FOA-0001562, Renewable Energy to Fuels through Utilization of Energy-dense Liquids (REFUEL SBIR/STTR). Small businesses that qualify as "Small Business Concerns" are strongly encouraged to apply under the former (SBIR/STTR FOA). To determine eligibility as a "Small Business Concern" under DE-FOA-0001563, please review the eligibility requirements in Sections III.A – III.D above.

IV. APPLICATION AND SUBMISSION INFORMATION

A. <u>APPLICATION PROCESS OVERVIEW</u>

1. **REGISTRATION IN SBA COMPANY REGISTRY**

The first step in applying to this FOA is registering in the U.S. Small Business Administration (SBA) Company Registry (<u>http://sbir.gov/registration</u>). Upon completing registration, Applicants will receive a unique small business Control ID and Registration Certificate in Adobe PDF format, which may be used at any participating SBIR and STTR agencies. Applicants that have previously registered in the SBA Company Registry need not register again.

Applicants that are sole proprietors and do not have an Employer Identification Number may use social security numbers for purposes of registering in the SBA Company Registry. Applicants that do not possess a Dun and Bradstreet Data Universal Numbering System (DUNS) number may also use their social security number in the SBA Company Registry.

Applicants must submit their Registration Certificate in ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov</u>) as part of their Full Application (see Section IV.D.5 of the FOA).

2. **REGISTRATION IN ARPA-E eXCHANGE**

Prior to submitting any application materials to ARPA-E, Applicants must register in ARPA-E eXCHANGE, ARPA-E's online application portal. For detailed guidance on using ARPA-E eXCHANGE, please refer to Section IV.H.1 of the FOA and the "ARPA-E eXCHANGE User Guide" (https://arpa-e-foa.energy.gov/Manuals.aspx).

3. CONCEPT PAPERS

Applicants must submit a Concept Paper by the deadline stated in the FOA. Section IV.C of the FOA provides instructions on submitting a Concept Paper.

ARPA-E performs a preliminary review of Concept Papers to determine whether they are compliant and responsive, as described in Section III.F of the FOA. Concept Papers found to be noncompliant or nonresponsive may not be merit reviewed or considered for award. ARPA-E makes an independent assessment of each compliant and responsive Concept Paper based on the criteria in Section V.A.1 of the FOA.

ARPA-E will encourage a subset of Applicants to submit Full Applications. Other Applicants will be discouraged from submitting a Full Application in order to save them the time and expense of preparing an application submission that is unlikely to be selected for award negotiations. By discouraging the submission of a Full Application, ARPA-E intends to convey its lack of programmatic interest in the proposed project. Such assessments do not necessarily reflect judgments on the merits of the proposed project. Unsuccessful Applicants should continue to submit innovative ideas and concepts to future FOAs.

4. FULL APPLICATIONS

Applicants must submit a Full Application by the deadline stated in the FOA. Applicants will have approximately 30 days from receipt of the Encourage/Discourage notification to prepare and submit a Full Application. Section IV.D of the FOA provides instructions on submitting a Full Application.

ARPA-E performs a preliminary review of Full Applications to determine whether they are compliant and responsive, as described in Section III.F of the FOA. Full Applications found to be noncompliant or nonresponsive may not be merit reviewed or considered for award. ARPA-E makes an independent assessment of each compliant and responsive Full Application based on the criteria in Section V.A.2 of the FOA.

5. **REPLY TO REVIEWER COMMENTS**

Once ARPA-E has completed its review of Full Applications, reviewer comments on compliant and responsive Full Applications are made available to Applicants via ARPA-E eXCHANGE. Applicants may submit an optional Reply to Reviewer Comments, which must be submitted by the deadline stated in the FOA. Section IV.E of the FOA provides instructions on submitting a Reply to Reviewer Comments.

ARPA-E performs a preliminary review of Replies to determine whether they are compliant, as described in Section III.F.1 of the FOA. ARPA-E will review and consider compliant Replies only.

ARPA-E will review and consider each compliant and responsive Full Application, even if no Reply is submitted or if the Reply is found to be non-compliant.

6. **PRE-SELECTION CLARIFICATIONS AND "DOWN-SELECT" PROCESS**

Once ARPA-E completes its review of Full Applications and Replies to Reviewer Comments, it may, at the Contracting Officer's discretion, conduct a pre-selection clarification process and/or perform a "down-select" of Full Applications. Through the pre-selection clarification process or down-select process, ARPA-E may obtain additional information from select Applicants through pre-selection meetings, webinars, videoconferences, conference calls, or site visits that can be used to make a final selection determination. ARPA-E will not reimburse Applicants for travel and other expenses relating to pre-selection meetings and site visits, nor will these costs be eligible for reimbursement as pre-award costs.

ARPA-E may select applications for award negotiations and make awards without pre-selection meetings and site visits. Participation in a pre-selection meeting or site visit with ARPA-E does not signify that Applicants have been selected for award negotiations.

7. SELECTION FOR AWARD NEGOTIATIONS

ARPA-E carefully considers all of the information obtained through the application process and makes an independent assessment of each compliant and responsive Full Application based on the criteria and program policy factors in Sections V.A.2 and V.B.1 of the FOA. The Selection Official may select or not select a Full Application for award negotiations. The Selection Official may also postpone a final selection determination on one or more Full Applications until a later date, subject to availability of funds and other factors. ARPA-E will enter into award negotiations only with selected Applicants.

Applicants are promptly notified of ARPA-E's selection determination. ARPA-E may stagger its selection determinations. As a result, some Applicants may receive their notification letter in advance of other Applicants. Please refer to Section VI.A of the FOA for guidance on award notifications.

8. MANDATORY WEBINAR

All selected Applicants, including the Principal Investigator and the financial manager for the project, are required to participate in a webinar that is held within approximately one week of the selection notification. During the webinar, ARPA-E officials present important information on the award negotiation process, including deadlines for the completion of certain actions.

B. <u>APPLICATION FORMS</u>

Required forms for Full Applications are available on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov</u>), including the SF-424 and Budget Justification Workbook/SF-424A. A sample Summary Slide is available on ARPA-E eXCHANGE. Applicants may use the templates available on ARPA-E eXCHANGE, including the template for the Concept Paper, the template for the Technical Volume of the Full Application, the template for the Summary Slide, the template for the Summary for Public Release, the template for the Reply to Reviewer Comments, and the template for the Business Assurances & Disclosures Form. A sample response to the Business Assurances & Disclosures Form is available on ARPA-E eXCHANGE.

C. CONTENT AND FORM OF CONCEPT PAPERS

<u>The Concept Paper is mandatory</u> (i.e. in order to submit a Full Application, a compliant and responsive Concept Paper must have been submitted) and must conform to the following formatting requirements:

- The Concept Paper must not exceed 4 pages in length including graphics, figures, and/or tables.
- The Concept Paper must be submitted in Adobe PDF format.
- The Concept Paper must be written in English.
- All pages must be formatted to fit on 8-1/2 by 11 inch paper with margins not less than one inch on every side. Single space all text and use Times New Roman typeface, a black font color, and a font size of 12 point or larger (except in figures and tables).
- The ARPA-E assigned Control Number, the Lead Organization Name, and the Principal Investigator's Last Name must be prominently displayed on the upper right corner of the header of every page. Page numbers must be included in the footer of every page.
- The first paragraph must include the Lead Organization's Name and Location, Principal Investigator's Name, Technical Category, Proposed Funding Requested (Federal and Cost Share), and Project Duration.

Concept Papers found to be noncompliant or nonresponsive may not be merit reviewed or considered for award (see Section III.F of the FOA).

Each Concept Paper should be limited to a single concept or technology. Unrelated concepts and technologies should not be consolidated into a single Concept Paper.

A fillable Concept Paper template is available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov</u>.

Concept Papers must conform to the content requirements described below. If Applicants exceed the maximum page length indicated above, ARPA-E will review only the authorized number of pages and disregard any additional pages:

1. CONCEPT SUMMARY

• Describe the proposed concept with minimal jargon, and explain how it addresses the Program Objectives of the FOA.

2. INNOVATION AND IMPACT

- Clearly identify the problem to be solved with the proposed technology concept.
- Describe how the proposed effort represents an innovative and potentially transformational solution to the technical challenges posed by the FOA.
- Explain the concept's potential to be disruptive compared to existing or emerging technologies.
- To the extent possible, provide quantitative metrics in a table that compares the proposed technology concept to current and emerging technologies and to the Technical Performance Targets in Section I.F of the FOA for the appropriate Technology Category in Section I.E of the FOA.
- Include an estimated value of the source-to-use energy cost (SUE) for a CNLF as determined by the following formula, where η is conversion efficiency, CF is the fuel production cost, CT is the transportation or transmission cost and CS is the storage cost: SUE= (CF+CT+CS)/η
- If only applying to Category 1 then the Applicant should use literature values for cost of conversion technologies appropriate to the proposed fuel. If applying only to Category 2, then the Applicant should use literature values for cost of the input carbon-neutral fuel.
- For simplicity, in the CP phase, transmission and storage costs for the calculation should be assumed to be \$0.02/kWh for any CNLF.

3. PROPOSED WORK

- Describe the final deliverable(s) for the project and the overall technical approach used to achieve project objectives.
- Discuss alternative approaches considered, if any, and why the proposed approach is most appropriate for the project objectives.
- Describe the background, theory, simulation, modeling, experimental data, or other sound engineering and scientific practices or principles that support the proposed approach. Provide specific examples of supporting data and/or appropriate citations to the scientific and technical literature.
- Describe why the proposed effort is a significant technical challenge and the key technical risks to the project. Does the approach require one or more entirely new technical developments to succeed? How will technical risk be mitigated?
- Identify techno-economic challenges to be overcome for the proposed technology to be commercially relevant.
- Estimated federal funds requested; total project cost including cost sharing.

4. TEAM ORGANIZATION AND CAPABILITIES

- Indicate the roles and responsibilities of the organizations and key personnel that comprise the Project Team.
- Provide the name, position, and institution of each key team member and describe in 1-2 sentences the skills and experience that he/she brings to the team.
- Identify key capabilities provided by the organizations comprising the Project Team and how those key capabilities will be used in the proposed effort.
- Identify (if applicable) previous collaborative efforts among team members relevant to the proposed effort.

D. <u>CONTENT AND FORM OF FULL APPLICATIONS</u>

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

Full Applications must conform to the following requirements:

- Each document must be submitted in the file format prescribed below.
- All Full Applications must be written in English.
- All pages must be formatted to fit on 8-1/2 by 11 inch paper with margins not less than one inch on every side. Single space all text and use Times New Roman typeface, a black font color, and a font size of 12 point or larger (except in figures and tables).
- The ARPA-E assigned Control Number, the Lead Organization Name, and the Principal Investigator's Last Name must be prominently displayed on the upper right corner of the header of every page. Page numbers must be included in the footer of every page.

Full Applications found to be noncompliant or nonresponsive may not be merit reviewed or considered for award (see Section III.F of the FOA).

Each Full Application should be limited to a single concept or technology. Unrelated concepts and technologies should not be consolidated in a single Full Application.

Fillable Full Application template documents are available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov</u>.

Full Applications must conform to the content requirements described below.

Component	<mark>Required</mark> Format	Description and Information
Technical Volume	PDF	The centerpiece of the Full Application. Provides a detailed description of the proposed R&D project and Project Team. A Technical Volume template is available on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov_</u>).
SF-424	PDF	Application for Federal Assistance (<u>https://arpa-e-foa.energy.gov</u>). Applicants are responsible for ensuring that the proposed costs listed in eXCHANGE match those listed on forms SF-424 and SF-424A. Inconsistent submissions may impact ARPA-E's final award determination.
Budget Justification Workbook/SF- 424A	XLS	Budget Information – Non-Construction Programs (<u>https://arpa-e-</u> foa.energy.gov)
Summary for Public Release	PDF	Short summary of the proposed R&D project. Intended for public release. A Summary for Public Release template is available on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov)</u> .

Summary Slide SBA Company Registration Certificate	PPT PDF	A four-panel project slide summarizing different aspects of the proposed R&D project. A Summary Slide template is available on ARPA-E eXCHANGE (https://arpa-e-foa.energy.gov). Registration Certificate generated upon completion of registration in the SBA Company Registry (http://sbir.gov/registration).
Certification for Applicants Majority-Owned by Multiple Venture Capital Operating Companies, Hedge Funds, or Private Equity Firms (if applicable)	PDF	Requires SBIR Applicants that are majority-owned by multiple venture capital operating companies, hedge funds, or private equity firms to self-identify and verify registration as such in the SBA Company Registry (<u>http://sbir.gov/registration</u>).
Business Assurances & Disclosures Form	PDF	Requires the Applicant to acknowledge eligibility with SBIR/STTR program requirements, make responsibility disclosures, disclose potential conflicts of interest within the Project Team, and provide written assurance of its cost share commitment. Requires the Applicant to describe the additionality and risks associated with the proposed project, disclose applications for funding currently pending with Federal and non-Federal entities, and disclose funding from Federal and non-Federal entities for work in the same technology area as the proposed R&D project. Requires the Project Team to confirm if each entity has obtained a DUNS number and has an active registration in SAM. This form is available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov</u> . A sample response to the Business Assurances & Disclosures Form is also available on ARPA-E eXCHANGE. <u>https://arpa-e-foa.energy.gov</u> . A sample response to the Business Assurances & Disclosures Form is also available on ARPA-E
U.S. Manufacturing Plan	PDF	As part of the application, Applicants are required to submit a U.S. Manufacturing Plan. The U.S. Manufacturing Plan represents the Applicant's measurable commitment to support U.S. manufacturing as a result of its award. See detailed U.S. Manufacturing Plan instructions and examples in the Seventh Component description below.
<mark>Cost Analysis</mark> Workbook	XLS	Applicants must submit a Cost Analysis Workbook which, provides experimental evidence, literature references, and calculations used to determine the proposed cost of source-to-energy as scale (in \$/kWh). Applicants are strongly encouraged to use the REFUEL Cost Analysis Workbook available on ARPA-E eXCHANGE (https://arpa-e-foa.energy.gov).

ARPA-E provides detailed guidance on the content and form of each component below.

1. FIRST COMPONENT: TECHNICAL VOLUME

The Technical Volume must be submitted in Adobe PDF format. A Technical Volume template is available at <u>https://arpa-e-foa.energy.gov</u>. The Technical Volume must conform to the following content and form requirements, including maximum page lengths specified below. If Applicants exceed the maximum page lengths specified for each section indicated below, ARPA-E will review only the authorized number of pages and disregard any additional pages.

Applicants must provide sufficient citations and references to the primary research literature to justify the claims and approaches made in the Technical Volume. ARPA-E and reviewers may review primary research literature in order to evaluate applications. <u>However, ARPA-E and</u> reviewers are under no obligation to review cited sources (e.g., Internet websites).

PAGE LIMIT	SECTION	DESCRIPTION
<mark>1 page max.</mark>	EXECUTIVE	Summarize the objective(s) and technical approach of the proposed effort
	SUMMARY	 at a technical level appropriate for scientific and engineering peers. INSTRUCTIONS: (1) The Project Title should be brief and descriptive of the proposed technology. (2) Identify the most relevant Technical Category for the proposed technology from the "Technical Categories of Interest" in Section I.E of the FOA. Select only one Technical Category unless the FOA specifically allows applications to name multiple categories. (3) Enter the estimated Total Project Cost in U.S. dollars and percentage cost share in parentheses. (4) Enter the Project Duration in months. (5) The Executive Summary shall not exceed 1 page in length (6) The Executive Summary may contain graphics, figures, or tables as needed to summarize the technical concept.
Sections 1-5	Section 1	Describe how the proposed work offers an innovative approach to achieve
30 pages max	INNOVATION	of ARPA-F
		 1.1 Overall Description. Describe the conceptual basis for the project and how the proposed technology works with minimal jargon. Explain the objective(s) and performance characteristics of the proposed effort. 1.2 Potential Impact.

		 Clearly identify the problem that is being solved with the proposed technology. Describe how the proposed effort addresses one (or more) of the "Technical Categories of Interest" from Section I.E of the FOA. Explain the project's potential to be disruptive relative to the existing technology or how the project establishes a basis for new innovations. Explain SUE Cost Calculation (see Section I.F of the FOA) and provide a screenshot of the summary Cost Calculation spreadsheet tab.
		 1.3 Innovativeness. Describe how the proposed effort represents a new and innovative solution to the overall program challenge described in the FOA. Indicate the technical goals and anticipated results, using appropriate metrics, for the project. Provide a description of how the metrics were derived, citing key previous results and/or assumptions. Include and discuss, as appropriate, a table in which the targeted performance of the proposed technology is compared with the "Technical Performance Targets" in Section I.F of the FOA and with other competing or emerging technologies that might achieve the
	Section 2 PROPOSED	 FOA Technical Performance Targets. INSTRUCTIONS: (1) The Innovation and Impact Section may include figures, tables, and graphics. (2) The suggested length of the Innovation and Impact Section is 4 pages. Describe and discuss for the proposed effort the technical background and approach, the R&D tasks, and the key technical risks. This Section must institute the proposed effort to achieve the project/or project/or
	WURK	 Justify the proposed approach as being appropriate to achieve the project's objective(s). 2.1 Approach. Describe the technical approach and how this approach will achieve the proposed project objective(s). Discuss alternative approaches considered, if any, and why the selected approach is most appropriate for the identified objective(s). Describe the background, theory, simulation, modeling, experimental data, or other sound engineering and scientific practices or principles that support achieving the project objective(s). Provide specific examples of supporting data and/or appropriate citations to the scientific and technical literature.

	2.2 Technical Risk.
	 Identify potential technical issues and risks, e.g., the approach
	requires a never-before-demonstrated fabrication technique or
	greater-than-previously-demonstrated sub-component
	performance, etc.
	 Describe appropriate mitigation techniques and plans, if any, for
	each identified issue and risk.
	2.3 Schedule.
	 Provide a schedule for the proposed effort by major tasks, including
	major milestones or Go/No-Go decision points as appropriate. (A
	Gantt chart is recommended.)
	2.4 Task Descriptions.
	 Identify and provide a full technical description for each main task in
	the proposed effort.
	 Discuss the reason the identified tasks are appropriate and
	sufficient for the identified approach.
	 Describe the key technical milestones and how these define the
	critical path for successful completion of the task.
	 Indicate how completion of each task relates to reducing
	technological uncertainty and achieving the overall project
	objective(s).
	INSTRUCTIONS:
	(1) The Proposed Work Section may include figures, tables, and graphics.
	(2) The suggested length of the Proposed Work Section is 12 pages.
Section 3 TEAM	Describe and discuss the, organization, capabilities, and management of the
ORGANIZATION	team and how these enable successful execution of the proposed effort.
AND	
CAPABILITIES	3.1 Organization.
	 Indicate roles and responsibilities of the organizations on the
	proposed Project Team, e.g., subrecipient, consultant,
	subcontractor, or lead organization for each of the project tasks.
	Include relevant organization charts and teaming organization
	charts, as applicable.
	 Identify Key Personnel, describe how their qualifications relate to
	the proposed effort, and indicate their roles and responsibilities for
	each of the project tasks.
	 Identify previous collaborative efforts among team members in relevant to the proposed effort.
	3.2 Capabilities, Facilities, Equipment, and Information.
	 Identify capabilities of the Applicant or proposed Project Team, e.g.,
	relevant experience, previous or current R&D efforts, or related

	 government or commercial projects, that support the proposed effort. Identify all required facilities, equipment, and information for the proposed effort and discuss their adequacy and availability. Indicate any key equipment that must be fabricated or purchased.
	 (1) This Section may include figures, tables, and graphics. (2) The suggested length of the Team Section is 4 pages.
Section 4 TECHNOLOGY TO MARKET	The significant impact sought by ARPA-E depends upon successful projects finding a path to large-scale adoption. ARPA-E projects are not required to achieve commercial deployment by the end of the project period, but the agency asks the Applicant to define a reasonable path for the proposed technology toward commercial adoption.
	 4.1 Technology to Market Strategy. Describe how the proposed technology is expected to transition from the lab to commercial deployment, including a description of the eventual product, potential near- and long-term market entries, likely commercialization approach (startup, license, etc.), specific organizations expected to be involved in the transition (partners, customers, etc.), and the commercialization timeline.
	 Discuss manufacturing, cost, and scalability risks associated with the technology. Describe anticipated resource needs for the next phase of development following the end of the ARPA-E project. Explain why the proposed research is not being pursued by industry today. Discuss the anticipated roles for the proposed research team in the commercialization of the technology.
	4.2 Intellectual Property.
	 Describe existing intellectual property, if any, that will be used to develop the new intellectual property; and Discuss new intellectual property and data that is anticipated to be created as part of this effort, if any.
	 INSTRUCTIONS: (1) The Technology to Market Section may include figures, tables, and graphics. (2) The suggested length of the Technology to Market Section is 4 pages.

Section 5 BUDGET	 Indicate the budget, in US dollars, and provide a high-level budget summary, demonstrating that the budget is reasonable and appropriate for the proposed effort. 5.1 Budget Breakdown. Provide in tabular form following the template give below, a breakdown of the project budget by entity and major task in US dollars. Replace "Prime" with name of the primary (lead) entity and "Sub #n" with the name of the sub-recipient or sub-contractor entities, if applicable. Task names should clearly correspond to major tasks listed in Section 2.4. Expand or contract the table as needed to add/subtract entities (columns) or tasks (rows). 							
	Phase I Task Name [Task #1] [Task #2] [Task #3] [Task #4] Total Phase II Task Name [Task #1] [Task #2] [Task #3] [Task #4]	[Prime]	[Sub #1]	[Sub #2]	[Sub #3]	[Sub #4]	Total	
	Total Phase IIS Task Name [Task #1] [Task #2] [Task #3] [Task #4] Total	[Prime]	[Sub #1]	[Sub #2]	[Sub #3]	[Sub #4]	Total	

		 Provide a high-level summary for the project by major budget category, including at least these three: Key Personnel and technical staff to be utilized (e.g., scientists, engineers, technicians, postdocs, graduate students, etc.) Equipment Materials and Supplies INSTRUCTIONS: (1) The Budget Section may include figures, tables, and graphics. (2) The suggested length of the Budget Section is 4 pages.
No page limit	REFERENCES	 Provide a list of references appropriate to Sections 1-5. INSTRUCTIONS: (1) Only bibliographic information may be contained in the references. No additional text or commentary is allowed. (2) There is no page limit for the Bibliographic References Section, which is outside of the overall 30-page limit for Sections 1-5.
Each PQS limited to 3 pages in length, no cumulative page limit	PERSONAL QUALIFICATION SUMMARIES	 A Personal Qualification Summary (PQS) is required for the PI and all other Key Personnel. Each PQS must include a description of the following only: Education and training Employment history Awards and honors A list of no more than 10 peer-reviewed publications related to the proposed project A list of no more than 10 other peer-reviewed publications demonstrating capabilities in the broad field A list of no more than 10 non-peer-reviewed publications and patents demonstrating capabilities in the broad field INSTRUCTIONS: Each Personal Qualification Summary is limited to 3 pages in length and there is no page limit for this Section, which is outside of the 30-page limit for Sections 1-5. Curriculum Vitae should not be submitted.

2. SECOND COMPONENT: SF-424

The SF-424 must be submitted in Adobe PDF format. This form is available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov.</u>

The SF-424 includes instructions for completing the form. Applicants are required to complete all required fields in accordance with the instructions.

Prime Recipients and Subrecipients are required to complete SF-LLL (Disclosure of Lobbying Activities), available at <u>https://www.whitehouse.gov/sites/default/files/omb/grants/sfillin.pdf</u>, if any non-Federal funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of a Member of Congress in connection with your application or funding agreement. The completed SF-LLL must be appended to the SF-424.

ARPA-E provides the following supplemental guidance on completing the SF-424:

- Each Project Team should submit only one SF-424 (i.e., a Subrecipient should not submit a separate SF-424).
- Assume a project start date of March 2017, or as negotiated.
- The list of certifications and assurances in Block 21 can be found at <u>http://energy.gov/management/downloads/certifications-and-assurances-use-sf-424</u>.
 - The dates and dollar amounts on the SF-424 are for the <u>entire project period (from</u> the project start date to the project end date), not a portion thereof.
 - Applicants are responsible for ensuring that the proposed costs listed in eXCHANGE match those listed on forms SF-424 and SF-424A. Inconsistent submissions may impact ARPA-E's final award determination.
 - 3. THIRD COMPONENT: BUDGET JUSTIFICATION WORKBOOK/SF-424A

Applicants are required to complete the Budget Justification Workbook/SF-424A Excel spreadsheet. This form is available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov</u>. Prime Recipients must complete each tab of the Budget Justification Workbook for the project as a whole, including all work to be performed by the Prime Recipient and its Subrecipients and Contractors. The SF-424A form included with the Budget Justification Workbook will "autopopulate" as the Applicant enters information into the Workbook. <u>Applicants should carefully</u> <u>read the "Instructions and Summary" tab provided within the Budget Justification Workbook.</u>

 Each Subrecipient incurring greater than or equal to 10% of the Total Project Cost must complete a separate Budget Justification workbook to justify its proposed budget. These worksheets must be inserted as additional sheets within in the Prime Recipient's Budget Justification.

- 56 -

 Subrecipients incurring less than 10% of the Total Project Cost are <u>not</u> required to complete a separate Budget Justification workbook. However, such Subrecipients are required to provide supporting documentation to justify their proposed budgets. At a minimum, the supporting documentation must show which tasks/subtasks are being performed, the purpose/need for the effort, and a sufficient basis for the estimated costs.

ARPA-E provides the following supplemental guidance on completing the Budget Justification Workbook/SF-424A:

- Applicants may request funds under the appropriate object class category tabs as long as the item and amount requested are necessary to perform the proposed work, meet all the criteria for allowability under the applicable Federal cost principles, and are not prohibited by the funding restrictions described herein.
- If Patent costs are requested, they must be included in the Applicant's proposed budget (see Section IV.G.3 of the FOA for more information on Patent Costs).
- For pricing purposes, assume a project start date of March 2017, or as negotiated.
- For more information, please refer to the ARPA-E Budget Justification Guidance document at <u>https://arpa-e-foa.energy.gov.</u>

4. FOURTH COMPONENT: SUMMARY FOR PUBLIC RELEASE

Applicants are required to provide a 250 word maximum Summary for Public Release. A Summary for Public Release template is available on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov</u>). The Summary for Public Release must be submitted in Adobe PDF format. This summary should not include any confidential, proprietary, or privileged information. The summary should be written for a lay audience (e.g., general public, media, Congress) using plain English.

<mark>250 Words</mark>	<mark>SUMMARY</mark>	Briefly describe the proposed effort, summarize its objective(s) and technical
	FOR PUBLIC	approach, describe its ability to achieve the "Program Objectives" (see Section
	RELEASE	I.C of the FOA), and indicate its potential impact on "ARPA-E Mission Areas"
		(see Section I.A of the FOA). The summary should be written at technical level
		suitable for a high-school science student and is designed for public release.
		INSTRUCTIONS:
		(1) The Summary for Public Release <u>shall not exceed 250 words and one</u>
		<mark>paragraph</mark> .
		(2) The Summary for Public Release <u>shall consist only of text</u> —no graphics,
		figures, or tables.
		(3) For applications selected for award negotiations, the Summary may be
		used as the basis for a public announcement by ARPA-E; therefore, <u>this</u>
		Cover Page and Summary should not contain confidential or proprietary
		information. See Section VIII.E of the FOA for additional information on
		marking confidential information

5. FIFTH COMPONENT: SUMMARY SLIDE

Applicants are required to provide a single PowerPoint slide summarizing the proposed project. The slide must be submitted in Microsoft PowerPoint format. This slide will be used during ARPA-E's evaluation of Full Applications. A summary slide template and a sample summary slide are available on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov</u>). Summary Slides must conform to the content requirements described below:

- A Technology Summary;
 - Bullet points that describe novel aspects of the proposed Technology and technology approach;
- A description of the Technology's impact;
 - Quantitative description (through text or graphic) of the impact the proposed project will provide to the market and ARPA-E mission areas;

- Proposed Targets;
 - Including any important technical performance metrics and/or impact categories;
 - Including quantitative description of the state of the art;
 - Including quantitative descriptions of the proposed targets;
- Technical Risks and Mitigation Plan;
 - Identify major technical risks and describe risk mitigation actions;
- Any key graphics (illustrations, charts and/or tables) summarizing technology development and/or impact;
- The project's key idea/takeaway;
- Project title and Principal Investigator information; and
- Requested ARPA-E funds and proposed Applicant cost share.

6. SIXTH COMPONENT: SBA REGISTRATION CERTIFICATE

Applicants are required to provide a copy of the SBA Registration Certificate generated in the SBA Company Registry (<u>http://sbir.gov/registration</u>) in Adobe PDF format (see Section IV.A.1 of the FOA). Applicants that have previously registered in the SBA Company Registry may submit a copy their existing Registration Certificate.

7. SEVENTH COMPONENT: CERTIFICATION FOR APPLICANTS MAJORITY-OWNED BY MULTIPLE VENTURE CAPITAL OPERATING COMPANIES, HEDGE FUNDS, AND PRIVATE EQUITY FIRMS

Only those Applicants that are majority-owned by multiple venture capital operating companies, hedge funds, or private equity firms are required to complete the Certification for Applicants Majority-Owned by Multiple Venture Capital Operating Companies, Hedge Funds, and Private Equity Funds. The certification must be submitted in Adobe PDF format. This form is available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov</u>.

In the Certification for Applicants Majority-Owned by Multiple Venture Capital Operating Companies, Hedge Funds, and Private Equity Funds, the Applicant is required to self-identify as an entity that falls into one of those categories, verify its ownership status, and verify that it has registered in the SBA Company Registry (<u>http://sbir.gov/registration</u>) as such an entity.

Applicants that are <u>not</u> majority-owned by multiple venture capital operating companies, hedge funds, or private equity firms are not required to complete this certification.

8. EIGHTH COMPONENT: BUSINESS ASSURANCES & DISCLOSURES FORM

Applicants are required to complete a Business Assurances & Disclosures Form. The form must be submitted in Adobe PDF format. This form is available on ARPA-E eXCHANGE at <u>https://arpa-e-foa.energy.gov</u>. A sample response to the Business Assurances & Disclosures Form is also available on ARPA-E eXCHANGE.

In the Business Assurances & Disclosures Form, the Applicant is required to:

- Acknowledge that it has reviewed SBA's eligibility requirements for the SBIR and STTR programs and that it anticipates that it will be able to certify eligibility to participate in ARPA-E's SBIR/STTR program at the time of award
- Disclose conditions bearing on responsibility, such as criminal convictions and Federal tax liability
- Disclose potential conflicts of interest within the Project Team

In addition, ARPA-E is required by statute to "accelerat[e] transformational technological advances in areas that industry is by itself not likely to undertake because of technical and financial uncertainty."⁷⁶ In accordance with ARPA-E's statutory mandate, the Applicant is required to:

- Describe the additionality and risks associated with the proposed R&D project
- Disclose any applications for the same project or related work currently pending with any Federal or non-Federal entities
- Disclose all funding for work in the same technology area as the proposed project received from any Federal or non-Federal entity within the last 5 years
- The Applicant may use the Business Assurances & Disclosures Form to request authorization to perform some work overseas

Each entity on a Project Team must also report the entity's DUNS number, confirmation of active registration in SAM, or the dates when the entity began or will begin the process of obtaining a DUNS number and/or register in SAM.

⁷⁶ America COMPETES Act, Pub. L. No. 110-69, § 5012 (2007), as amended (codified at 42 U.S.C. § 16538).

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email <u>ExchangeHelp@hq.doe.gov</u> (with FOA name and number in subject line).

9. NINTH COMPONENT: U.S. MANUFACTURING PLAN

As part of the application, Applicants are required to submit a U.S. Manufacturing Plan that should not exceed one page in length. The U.S. Manufacturing Plan represents the Applicant's measurable commitment to support U.S. manufacturing as a result of its award. U.S. Manufacturing Plans are a Program Policy Factor during the review and selection process. See Section V.B.1 of the FOA.

A U.S. Manufacturing Plan should contain the following or similar preamble: "If selected for funding, the Applicant agrees to the following commitments as a condition of that funding:" and, after the preamble, the plan should include one or more specific and measureable commitments. For example, an Applicant may commit particular types of products to be manufactured in the U.S. **These plans should not include requirements regarding the source of inputs used during the manufacturing process.** In addition to or instead of making a commitment tied to a particular product, the Applicant may commit to a particular investment in a new or existing U.S. manufacturing facility, keep certain activities based in the U.S. (i.e., final assembly) or support a certain number of jobs in the U.S. related to the technology and manufacturing. For an Applicant which is likely to license the technology to others, especially universities for which licensing may be the exclusive means of commercialization the technology, the U.S. manufacturing plan may indicate the Applicant's plan and commitment to use a licensing strategy **for both exclusive and nonexclusive licensing** that would likely support U.S. manufacturing.

When an Applicant that is a domestic small business, domestic educational institution, or nonprofit organization is selected for an award, the U.S. Manufacturing Plan submitted by the Applicant becomes part of the terms and conditions of the award **in addition to the requirements attaching to subject inventions described in VI.B.8 of the FOA below**. The Applicant/awardee may request a waiver or modification of the U.S. Manufacturing Plan from DOE upon a showing that the original U.S. Manufacturing Plan is no longer economically feasible.

When an Applicant that is a domestic large business is selected for an award, usually a class patent waiver applies as set forth in Section VIII.F of the FOA. Under this class patent waiver, domestic large businesses may elect title to their subject inventions similar to the right provided to the domestic small businesses, educational institutions, and nonprofits by law. In order to avail itself of the class patent waiver, a domestic large business must agree that any products embodying or produced through the use of an invention conceived or first actually reduced to practice under the award will be substantially manufactured in the United States, unless DOE agrees that the commitments proposed in the U.S. Manufacturing Plan are

sufficient. The U.S. Manufacturing Plan submitted by the Applicant will become part of the terms and conditions of the award **in addition to the requirements attaching to subject** inventions.

10. TENTH COMPONENT: COST ANALYSIS WORKBOOK

Applicants must submit a Cost Analysis Workbook, which provides the experimental evidence, literature references, and calculations used to determine the proposed cost of source-to-use energy at scale (in \$/kWh). Applicants are strongly encouraged to use the REFUEL Cost Analysis Workbook submit a Cost Analysis Workbook. The Cost Analysis Workbook must be submitted in a Microsoft Excel Spreadsheet. The REFUEL Cost Analysis Workbook template is available at https://arpa-e-foa.energy.gov. All Cost Analysis Workbooks must conform to the following content and form requirements.

SUE Overview table Fuel Production Cost (Cat. 1a)

COST ANALYSIS SUMMARY

Purpose: This worksheet is intended to provide an estimated production cost of the fuel using the proposed technology. The total calculated value will be based on cost estimates provided by the applicant for converting electricity into fuel, transporting for 1000 miles, storing the fuel, and converting it back to electricity. Fields higlighted in blue need to be filled in by the applicant or selected from a dropdown menu, while orange fields will automatically be populated based on the data provided. If proposing to either "Category 1", "Category 2", or "Category 1&2 combined", then fill out the appropriate sheet in this workbook. When entering the final value in that spreadsheet, the values in this sheet will highlight yellow and change the SUE accordingly.

E. CONTENT AND FORM OF REPLIES TO REVIEWER COMMENTS

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

Written feedback on Full Applications is made available to Applicants before the submission deadline for Replies to Reviewer Comments. Applicants have a brief opportunity to prepare a short Reply to Reviewer Comments responding to one or more comments or supplementing their Full Application. A fillable Reply to Reviewer Comments template is available on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov</u>).

Replies to Reviewer Comments must conform to the following requirements:

- The Reply to Reviewer Comments must be submitted in Adobe PDF format.
- The Reply to Reviewer Comments must be written in English.
- All pages must be formatted to fit on 8-1/2 by 11 inch paper with margins not less than one inch on every side. Use Times New Roman typeface, a black font color, and a font size of 12 points or larger (except in figures and tables).
- The Control Number must be prominently displayed on the upper right corner of the header of every page. Page numbers must be included in the footer of every page.

ARPA-E will not review or consider noncompliant Replies to Reviewer Comments (see Section III.F of the FOA). ARPA-E will review and consider each compliant and responsive Full Application, even if no Reply is submitted or if the Reply is found to be noncompliant.

Replies to Reviewer Comments must conform to the following content and form requirements, including maximum page lengths, described below. If a Reply to Reviewer Comments is more than three pages in length, ARPA-E will review only the first three pages and disregard any additional pages.

SECTION	PAGE LIMIT	DESCRIPTION
<mark>Text</mark>	2 pages maximum	 Applicants may respond to one or more reviewer comments or supplement their Full Application.
Images	<mark>1 page</mark> maximum	 Applicants may provide graphs, charts, or other data to respond to reviewer comments or supplement their Full Application.

F. INTERGOVERNMENTAL REVIEW

This program is not subject to Executive Order 12372 (Intergovernmental Review of Federal Programs).

G. <u>FUNDING RESTRICTIONS</u>

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

1. ALLOWABLE COSTS

All expenditures must be allowable, allocable, and reasonable in accordance with the applicable Federal cost principles. ARPA-E has listed the Federal cost principles for different categories of Applicants at http://arpa-e.energy.gov/?g=site-page/post-award-guidance-sbir-sttr.

2. Pre-Award Costs

ARPA-E will not reimburse any pre-award costs incurred by Applicants before they are selected for award netices.

Upon selection for award negotiations, Applicants may incur pre-award costs at their own risk, consistent with the requirements in 2 C.F.R. Part 200, as modified by 2 C.F.R. Part 910, and other Federal laws and regulations. ARPA-E generally does not accept budgets as submitted with the Full Application. Budgets are typically reworked during award negotiations. ARPA-E is under no obligation to reimburse pre-award costs if, for any reason, the Applicant does not receive an award or the award is made for a lesser amount than the Applicant expected, or if the costs incurred are not allowable, allocable, or reasonable.

Please refer to the "SBIR/STTR Applicants' Guide to ARPA-E Award Negotiations" (<u>http://arpa-e.energy.gov/?q=arpa-e-site-page/pre-award-guidance-sbir-sttr</u>) for additional guidance on pre-award costs.

3. PATENT COSTS

For Subject Inventions disclosed to DOE under an award, ARPA-E will reimburse the Prime Recipient – in addition to allowable costs associated with Subject Invention disclosures - up to \$30,000 of expenditures for filing and prosecution of United States patent applications, including international applications ("PCT application") submitted to the USPTO.
The Prime Recipient may request a waiver of the \$30,000 cap which is subject to approval by the ARPA-E Program Director and Contracting Officer.

4. CONSTRUCTION

ARPA-E generally does not fund projects that involve major construction. Recipients are required to obtain written authorization from the Contracting Officer before incurring any major construction costs.

5. FOREIGN TRAVEL

ARPA-E generally does not fund projects that involve foreign travel. Recipients are required to obtain written authorization from the Contracting Officer before incurring any foreign travel costs and provide trip reports with their reimbursement requests.

6. Performance of Work in the United States

ARPA-E strongly encourages interdisciplinary and cross-sectoral collaboration spanning organizational boundaries. Such collaboration enables the achievement of scientific and technological outcomes that were previously viewed as extremely difficult, if not impossible.

ARPA-E requires all work under ARPA-E funding agreements to be performed in the United States – i.e., Prime Recipients must expend 100% of the Total Project Cost in the United States. However, Applicants may request a waiver of this requirement where their project would materially benefit from, or otherwise requires, certain work to be performed overseas.

Applicants seeking a waiver of this requirement are required to include an explicit request in the Business Assurances & Disclosures Form, which is part of the Full Application submitted to ARPA-E. Such waivers are granted where there is a demonstrated need, as determined by ARPA-E.

7. PURCHASE OF NEW EQUIPMENT

All equipment purchased under ARPA-E funding agreements must be made or manufactured in the United States, to the maximum extent practicable. This requirement does not apply to used or leased equipment. The Prime Recipients are required to notify the ARPA-E Contracting Officer reasonably in advance of purchasing any equipment that is not made or manufactured in the United States with an acquisition cost of \$25,000 or more per unit. The ARPA-E Contracting Officer will provide consent to purchase or reject within 30 calendar days of receipt of the Recipient's notification.

8. LOBBYING

Prime Recipients and Subrecipients may not use any Federal funds, directly or indirectly, to influence or attempt to influence, directly or indirectly, congressional action on any legislative or appropriation matters.

Prime Recipients and Subrecipients are required to complete and submit SF-LLL, "Disclosure of Lobbying Activities" (<u>http://www.whitehouse.gov/sites/default/files/omb/grants/sflllin.pdf</u>) if any non-Federal funds have been paid or will be paid to any person for influencing or attempting to influence any of the following in connection with your application:

- An officer or employee of any Federal agency,
- A Member of Congress,
- An officer or employee of Congress, or
- An employee of a Member of Congress.

9. CONFERENCE SPENDING

Prime Recipients and Subrecipients may not use any Federal funds to:

- Defray the cost to the United States Government of a conference held by any Executive branch department, agency, board, commission, or office which is not directly and programmatically related to the purpose for which their ARPA-E award is made and for which the cost to the United States Government is more than \$20,000, or
- To circumvent the required notification by the head of any such Executive Branch department, agency, board, commission, or office to the Inspector General (or senior ethics official for any entity without an Inspector General), of the date, location, and number of employees attending such a conference.

10. INDEPENDENT RESEARCH AND DEVELOPMENT COSTS

ARPA-E does not provide financial assistance or reimburse organizations for IR&D costs, or count IR&D costs as cost share, as defined at 48 C.F.R. § 31.205-18(a). Indirect cost rate proposals submitted to ARPA-E shall include IR&D costs in the direct cost base used to calculate the indirect rate(s) to ensure an appropriate allocation of indirect costs to the organization's direct cost centers.

H. OTHER SUBMISSION REQUIREMENTS

1. USE OF ARPA-E EXCHANGE

To apply to this FOA, Applicants must register with ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov/Registration.aspx</u>). Full Applications must be submitted through ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov/login.aspx</u>). <u>ARPA-E will not review or consider</u> <u>applications submitted through other means</u> (e.g., fax, hand delivery, email, postal mail). For detailed guidance on using ARPA-E eXCHANGE, please refer to the "ARPA-E eXCHANGE User Guide" (<u>https://arpa-e-foa.energy.gov/Manuals.aspx</u>).

Upon creating an application submission in ARPA-E eXCHANGE, Applicants will be assigned a Control Number. If the Applicant creates more than one application submission, a different Control Number will be assigned for each application.

Once logged in to ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov/login.aspx</u>), Applicants may access their submissions by clicking the "My Submissions" link in the navigation on the left side of the page. Every application that the Applicant has submitted to ARPA-E and the corresponding Control Number is displayed on that page. If the Applicant submits more than one application to a particular FOA, a different Control Number is shown for each application.

Applicants are responsible for meeting each submission deadline in ARPA-E eXCHANGE. <u>Applicants are strongly encouraged to submit their applications at least 48 hours in advance</u> <u>of the submission deadline</u>. Under normal conditions (i.e., at least 48 hours in advance of the submission deadline), Applicants should allow at least 1 hour to submit Full Application. Once the application is submitted in ARPA-E eXCHANGE, Applicants may revise or update their application until the expiration of the applicable deadline.

Applicants should not wait until the last minute to begin the submission process. During the final hours before the submission deadline, Applicants may experience server/connection congestion that prevents them from completing the necessary steps in ARPA-E eXCHANGE to

submit their applications. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information and documents due to server/connection congestion.

ARPA-E will not review or consider incomplete applications and applications received after the deadline stated in the FOA. Such applications will be deemed noncompliant (see Section III.F.1 of the FOA). The following errors could cause an application to be deemed "incomplete" and thus noncompliant:

- Failing to comply with the form and content requirements in Section IV.C IV.E of the FOA
- Failing to enter required information in ARPA-E eXCHANGE
- Failing to upload required document(s) to ARPA-E eXCHANGE
- Failing to click the "Submit" button in ARPA-E eXCHANGE by the deadline stated in the FOA
- Uploading the wrong document(s) or application(s) to ARPA-E eXCHANGE and
- Uploading the same document twice, but labeling it as different documents (In the latter scenario, the Applicant failed to submit a required document)

ARPA-E urges Applicants to carefully review their applications and to allow sufficient time for the submission of required information and documents.

V. APPLICATION REVIEW INFORMATION

A. <u>CRITERIA</u>

ARPA-E performs a preliminary review of Concept Papers and Full Applications to determine whether they are compliant and responsive (see Section III.F of the FOA). ARPA-E also performs a preliminary review of Replies to Reviewer Comments to determine whether they are compliant.

ARPA-E considers a mix of quantitative and qualitative criteria in determining whether to encourage the submission of a Full Application and whether to select a Full Application for award negotiations.

1. CRITERIA FOR CONCEPT PAPERS

- (1) *Impact of the Proposed Technology Relative to FOA Targets* (50%) This criterion involves consideration of the following:
 - The potential for a transformational and disruptive (not incremental) advancement compared to existing or emerging technologies;
 - Achievement of the Technical Performance Targets defined in Section 1.F of the FOA for the appropriate technology Category in Section I.E of the FOA; and
 - Demonstration of awareness of competing commercial and emerging technologies and identifies how the proposed concept/technology provides significant improvement over existing solutions.
- (2) *Overall Scientific and Technical Merit* (50%) This criterion involves consideration of the following:
 - The feasibility of the proposed work, as justified by appropriate background, theory, simulation, modeling, experimental data, or other sound scientific and engineering practices;
 - Sufficiency of technical approach to accomplish the proposed R&D objectives, including why the proposed concept is more appropriate than alternative approaches and how technical risk will be mitigated;
 - Clearly defined project outcomes and final deliverables;
 - Identification of techno-economic challenges that must be overcome for the proposed technology to be commercially relevant; and
 - The demonstrated capabilities of the individuals performing the project, the key capabilities of the organizations comprising the Project Team, the roles and responsibilities of each organization and (if applicable) previous collaborations among team members supporting the proposed project.

Submissions will not be evaluated against each other since they are not submitted in accordance with a common work statement. The above criteria will be weighted as follows:

Impact of the Proposed Technology Relative to FOA Targets	50%
Overall Scientific and Technical Merit	50%

2. CRITERIA FOR FULL APPLICATIONS

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

Full Applications are evaluated based on the following criteria:

- (1) Impact of the Proposed Technology (30%) This criterion involves consideration of the following:
 - The potential for a transformational and disruptive (not incremental) advancement in one or more energy-related fields;
 - Thorough understanding of the current state-of-the-art and presentation of an innovative technical approach to significantly improve performance over the current state-of-the-art;
 - Awareness of competing commercial and emerging technologies and identification of how the proposed concept/technology provides significant improvement over these other solutions; and
 - A reasonable and effective strategy for transitioning the proposed technology from the laboratory to commercial deployment.
- (2) Overall Scientific and Technical Merit (30%) This criterion involves consideration of the following:
 - The proposed work is unique and innovative;
 - Clearly defined project outcomes and final deliverables;
 - Substantiation that the proposed project is likely to meet or exceed the technical performance targets identified in this FOA;
 - Feasibility of the proposed work based upon preliminary data or other background information and sound scientific and engineering practices and principles;
 - A sound technical approach, including appropriately defined technical tasks, to accomplish the proposed R&D objectives; and

- Management of risk, to include identifying major technical R&D risks and feasible, effective mitigation strategies.
- (3) Qualifications, Experience, and Capabilities of the Proposed Project Team (30%) This criterion involves consideration of the following:
 - The PI and Project Team have the skill and expertise needed to successfully execute the project plan, evidenced by prior experience that demonstrates an ability to perform R&D of similar risk and complexity; and
 - Access to the equipment and facilities necessary to accomplish the proposed R&D effort and/or a clear plan to obtain access to necessary equipment and facilities.
- (4) Soundness of Management Plan (10%) This criterion involves consideration of the following:
 - Plausibility of plan to manage people and resources;
 - Allocation of appropriate levels of effort and resources to proposed tasks;
 - Reasonableness of the proposed project schedule, including major milestones; and
 - Reasonableness of the proposed budget to accomplish the proposed project.

Submissions will not be evaluated against each other since they are not submitted in accordance with a common work statement.

3. CRITERIA FOR REPLIES TO REVIEWER COMMENTS

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

ARPA-E has not established separate criteria to evaluate Replies to Reviewer Comments. Instead, Replies to Reviewer Comments are evaluated as an extension of the Full Application.

B. <u>REVIEW AND SELECTION PROCESS</u>

1. **PROGRAM POLICY FACTORS**

In addition to the above criteria, ARPA-E may consider the following program policy factors in determining which Concept Papers to encourage to submit a Full Application and which Full Applications to select for award negotiations:

- I. **ARPA-E Portfolio Balance**. Project balances ARPA-E portfolio in one or more of the following areas:
 - a. Diversity (including gender) of technical personnel in the proposed Project Team;
 - b. Technological diversity;
 - c. Organizational diversity;
 - d. Geographic diversity;
 - e. Technical or commercialization risk; or
 - f. Stage of technology development.
- II. **Relevance to ARPA-E Mission Advancement.** Project contributes to one or more of ARPA-E's key statutory goals:
 - a. Reduction of US dependence on foreign energy sources;
 - b. Stimulation of domestic manufacturing/U.S. Manufacturing Plan;
 - c. Reduction of energy-related emissions;
 - d. Increase in U.S. energy efficiency;
 - e. Enhancement of U.S. economic and energy security; or
 - f. Promotion of U.S. advanced energy technologies competitiveness.

III. Synergy of Public and Private Efforts.

- a. Avoids duplication and overlap with other publicly or privately funded projects;
- Promotes increased coordination with nongovernmental entities for demonstration of technologies and research applications to facilitate technology transfer; or
- c. Increases unique research collaborations.
- IV. Low likelihood of other sources of funding. High technical and/or financial uncertainty that results in the non-availability of other public, private or internal funding or resources to support the project.
- V. High Project Impact Relative to Project Cost.

2. ARPA-E REVIEWERS

By submitting an application to ARPA-E, Applicants consent to ARPA-E's use of Federal employees, contractors, and experts from educational institutions, nonprofits, industry, and governmental and intergovernmental entities as reviewers. ARPA-E selects reviewers based on their knowledge and understanding of the relevant field and application, their experience and skills, and their ability to provide constructive feedback on applications.

ARPA-E requires all reviewers to complete a Conflict-of-Interest Certification and Nondisclosure Agreement through which they disclose their knowledge of any actual or apparent conflicts and agree to safeguard confidential information contained in Concept Papers, Full Applications, and Replies to Reviewer Comments. In addition, ARPA-E trains its reviewers in proper evaluation techniques and procedures.

Applicants are not permitted to nominate reviewers for their applications. Applicants may contact the Contracting Officer by email (<u>ARPA-E-CO@hq.doe.gov</u>) if they have knowledge of a potential conflict of interest or a reasonable belief that a potential conflict exists.

3. ARPA-E SUPPORT CONTRACTOR

ARPA-E utilizes contractors to assist with the evaluation of applications and project management. To avoid actual and apparent conflicts of interest, ARPA-E prohibits its support contractors from submitting or participating in the preparation of applications to ARPA-E.

By submitting an application to ARPA-E, Applicants represent that they are not performing support contractor services for ARPA-E in any capacity and did not obtain the assistance of ARPA-E's support contractor to prepare the application. ARPA-E will not consider any applications that are submitted by or prepared with the assistance of its support contractors.

C. <u>ANTICIPATED ANNOUNCEMENT AND AWARD DATES</u>

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

ARPA-E expects to announce selections for negotiations in approximately November 2016 and to execute funding agreements in approximately March 2017.

VI. AWARD ADMINISTRATION INFORMATION

A. Award Notices

1. REJECTED SUBMISSIONS

Noncompliant and nonresponsive Concept Papers and Full Applications are rejected by the Contracting Officer and are not reviewed or considered. The Contracting Officer sends a notification letter by email to the technical and administrative points of contact designated by the Applicant in ARPA-E eXCHANGE. The notification letter states the basis upon which the Concept Paper or Full Application was rejected.

2. CONCEPT PAPER NOTIFICATIONS

ARPA-E promptly notifies Applicants of its determination to encourage or discourage the submission of a Full Application. ARPA-E sends a notification letter by email to the technical and administrative points of contact designated by the Applicant in ARPA-E eXCHANGE. ARPA-E provides feedback in the notification letter in order to guide further development of the proposed technology.

Applicants may submit a Full Application even if they receive a notification discouraging them from doing so. By discouraging the submission of a Full Application, ARPA-E intends to convey its lack of programmatic interest in the proposed project. Such assessments do not necessarily reflect judgments on the merits of the proposed project. The purpose of the Concept Paper phase is to save Applicants the considerable time and expense of preparing a Full Application that is unlikely to be selected for award negotiations.

A notification letter encouraging the submission of a Full Application does <u>not</u> authorize the Applicant to commence performance of the project. Please refer to Section IV.G.2 of the FOA for guidance on pre-award costs.

3. FULL APPLICATION NOTIFICATIONS

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

ARPA-E promptly notifies Applicants of its determination. ARPA-E sends a notification letter by email to the technical and administrative points of contact designated by the Applicant in ARPA-E eXCHANGE. The notification letter may inform the Applicant that its Full Application was selected for award negotiations, or not selected. Alternatively, ARPA-E may notify one or

more Applicants that a final selection determination on particular Full Applications will be made at a later date, subject to the availability of funds or other factors.

Written feedback on Full Applications is made available to Applicants before the submission deadline for Replies to Reviewer Comments. By providing feedback, ARPA-E intends to guide the further development of the proposed technology and to provide a brief opportunity to respond to reviewer comments.

a. Successful Applicants

ARPA-E has discretion to select all or part of a proposed project for negotiation of an award. A notification letter selecting a Full Application for award negotiations does <u>not</u> authorize the Applicant to commence performance of the project. **ARPA-E selects Full Applications for award negotiations, not for award.** Applicants do not receive an award until award negotiations are complete and the Contracting Officer executes the funding agreement. ARPA-E may terminate award negotiations at any time for any reason.

Please refer to Section IV.G.2 of the FOA for guidance on pre-award costs. Please also refer to the "SBIR/STTR Applicants' Guide to ARPA-E Award Negotiations" (<u>http://arpa-</u> <u>e.energy.gov/?q=arpa-e-site-page/pre-award-guidance-sbir-sttr</u>) for guidance on the award negotiation process.

b. Postponed Selection Determinations

A notification letter postponing a final selection determination until a later date does <u>not</u> authorize the Applicant to commence performance of the project. ARPA-E may ultimately determine to select or not select the Full Application for award negotiations.

Please refer to Section IV.G.2 of the FOA for guidance on pre-award costs.

c. Unsuccessful Applicants

By not selecting a Full Application, ARPA-E intends to convey its lack of programmatic interest in the proposed project. Such assessments do not necessarily reflect judgments on the merits of the proposed project. ARPA-E hopes that unsuccessful Applicants will submit innovative ideas and concepts for future FOAs.

B. Administrative and National Policy Requirements

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

The following administrative and national policy requirements apply to Prime Recipients. The Prime Recipient is the responsible authority regarding the settlement and satisfaction of all contractual and administrative issues, including but not limited to disputes and claims arising out of any agreement between the Prime Recipient and a FFRDC contractor. Prime Recipients are required to flow down these requirements to their Subrecipients through subawards or related agreements.

1. DUNS NUMBER AND SAM, FSRS, AND FEDCONNECT REGISTRATIONS

Upon selection for award negotiations, Prime Recipients and Subrecipients are required to Prime Recipients and Subrecipients are required to obtain a Dun and Bradstreet Data Universal Numbering System (DUNS) number at <u>http://fedgov.dnb.com/webform and</u> to register with the System for Award Management (SAM) at <u>https://www.sam.gov/portal/public/SAM/</u>.

Prime Recipients and Subrecipients should commence this process as soon as possible in order to expedite the execution of a funding agreement. Obtaining a DUNS number and registering with SAM could take several weeks.

Prime Recipients are also required to register with the Federal Funding Accountability and Transparency Act Subaward Reporting System (FSRS) at <u>https://www.fsrs.gov/</u>.⁷⁷ Prime Recipients are required to report to FSRS the names and total compensation of each of the Prime Recipient's five most highly compensated executives and the names and total compensation of each Subrecipient's five most highly compensated executives. Please refer to <u>https://www.fsrs.gov/</u> for guidance on reporting requirements.

ARPA-E may not execute a funding agreement with the Prime Recipient until it has obtained a DUNS number and completed its SAM and FSRS registrations. In addition, the Prime Recipient may not execute subawards with Subrecipients until they obtain a DUNS number and complete their SAM registration. Prime Recipients and Subrecipients are required to keep their SAM and FSRS data current throughout the duration of the project.

Finally, Prime Recipients are required to register with FedConnect in order to receive notification that their funding agreement has been executed by the Contracting Officer and to obtain a copy of the executed funding agreement. Please refer to <u>https://www.fedconnect.net/FedConnect/</u> for registration instructions.

⁷⁰ The Federal Funding Accountability and Transparency Act, P.L. 109-282, 31 U.S.C. 6101 note.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email ExchangeHelp@hq.doe.gov (with FOA name and number in subject line).

2. NATIONAL POLICY ASSURANCES

Project Teams, including Prime Recipients and Subrecipients, are required to comply with the National Policy Assurances attached to their funding agreement. Please refer to ARPA-E's Model Cooperative Agreement for SBIR/STTR awards (<u>http://arpa-e.energy.gov/?q=arpa-e-site-</u> page/award-guidance-sbir-sttr) for guidance on the National Policy Assurances.

3. Proof of Cost Share Commitment

The Prime Recipient is also required to provide cost share commitment letters from Subrecipients or third parties that are providing cost share, whether cash or in-kind. Each Subrecipient or third party that is contributing cost share must provide a letter on appropriate letterhead that is signed by an authorized corporate representative. Please refer to the "SBIR/STTR Applicants' Guide to ARPA-E Award Negotiations" (http://arpae.energy.gov/?g=arpa-e-site-page/pre-award-guidance-sbir-sttr) for guidance on the contents of cost share commitment letters. The ARPA-E Contracting Officer will determine if cost share is allowable under applicable Federal cost principles. For additional information on cost share types and allowability see Section III.E.5 of the FOA.

4. Cost Share Payments⁷⁸

All proposed cost share contributions for Phase II and Phase IIS of Combined Phase I/II/IIS awards must be reviewed in advance by the Contracting Officer and incorporated into the project budget before the expenditures are incurred.

ARPA-E requires Prime Recipients to contribute the cost share amount incrementally during the performance of work in Phase II and/or Phase IIS.⁷⁹ Specifically, every Prime Recipient is required to contribute, at a minimum, the cost share percentage of total expenditures incurred during every billing period in Phase II and/or Phase IIS (subject to any applicable Cost Share Grace Period). For example, a Prime Recipient is required to contribute at least 10% of the total expenditures incurred during every billing period in Phase II and/or Phase II if the funding agreement states that the cost share percentage in Phase II is 10%.

Prime Recipients must submit written documentation with every reimbursement request demonstrating that it (or Project Team, as appropriate) has provided the requisite cost share during the relevant billing period.

 ⁷⁸ Please refer to Section III.E of the FOA for guidance on cost share requirements.
⁷⁹ Prime Recipients may elect to pay the entire cost share amount at the start of the project.

Questions about this FOA? Check the Frequently Asked Questions available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, email <u>ARPA-E-CO@hq.doe.gov</u> (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email ExchangeHelp@hq.doe.gov (with FOA name and number in subject line).

If Prime Recipients anticipate difficulty providing the requisite cost share every billing period, they may request authorization from the Contracting Officer upon selection for award negotiations to deviate from ARPA-E's standard cost share payment schedule.

Please refer to the "SBIR/STTR Applicants' Guide to ARPA-E Award Negotiations" (<u>http://arpa-</u> e.energy.gov/?g=arpa-e-site-page/pre-award-guidance-sbir-sttr) for additional guidance on cost share payment requirements.

ARPA-E may deny reimbursement requests, in whole or in part, or modify or terminate funding agreements where Prime Recipients (or Project Teams) fail to comply with ARPA-E's cost share payment requirements.

5. Environmental Impact Questionnaire

By law, ARPA-E is required to evaluate the potential environmental impact of projects that it is considering for funding. In particular, ARPA-E must determine <u>before funding a project</u> whether the project qualifies for a categorical exclusion under 10 C.F.R. § 1021.410 or whether it requires further environmental review (i.e., an environmental assessment or an environmental impact statement).

To facilitate and expedite ARPA-E's environmental review, Prime Recipients are required to complete an Environmental Impact Questionnaire during award negotiations. This form is available on ARPA-E' website at <u>http://arpa-e.energy.gov/?q=arpa-e-site-page/pre-award-</u> guidance-sbir-sttr. The Environmental Impact Questionnaire is due within 21 calendar days of the selection announcement.

6. TECHNOLOGY-TO-MARKET PLAN

During award negotiations, Prime Recipients are required to negotiate and submit an initial Technology-to-Market Plan for Phase II and Phase IIS with the ARPA-E Program Director, and obtain the ARPA-E Program Director's approval prior to the execution of the award. During the project period, Prime Recipients are required to provide regular updates on the initial Technology-to-Market plan and report on implementation of Technology-to-Market activities. Prime Recipients may be required to perform other actions to further the commercialization of their respective technologies. Prime Recipients are not required to negotiate a Technology-to-Market Plan for Phase I only awards.

ARPA-E may waive or modify this requirement, as appropriate.

7. INTELLECTUAL PROPERTY AND DATA MANAGEMENT PLAN

ARPA-E requires every Project Team to negotiate and establish an Intellectual Property Management Plan for the management and disposition of intellectual property arising from the project. The Prime Recipient must submit a completed and signed Intellectual Property Management plan to ARPA-E within six weeks of the effective date of the ARPA-E funding agreement. All Intellectual Property Management Plans are subject to the terms and conditions of the ARPA-E funding agreement and its intellectual property provisions, and applicable Federal laws, regulations, and policies, all of which take precedence over the terms of Intellectual Property Management Plans.

ARPA-E has developed a template for Intellectual Property Management Plan (<u>http://arpae.energy.gov/?q=arpa-e-site-page/award-guidance-sbir-sttr</u>) so as to facilitate and expedite negotiations between Project Team members. ARPA-E does not mandate the use of this template. ARPA-E and DOE do not make any warranty (express or implied) or assume any liability or responsibility for the accuracy, completeness, or usefulness of the template. ARPA-E and DOE strongly encourage Project Teams to consult independent legal counsel before using the template.

Awardees are also required, post-award, to submit a Data Management Plan (DMP) that addresses how data generated in the course of the work performed under an ARPA-E award will be preserved and, as appropriate, shared publicly. The Prime Recipient must submit a completed and signed DMP - as part of the Team's Intellectual Property Management Plan - to ARPA-E within six weeks of the effective date of the ARPA-E funding agreement. The DMP must meet the minimum requirements set forth in ARPA-E's "Applicant Guide to Award Negotiations" available at the following website: <u>http://arpa-e.energy.gov/?q=arpa-e-site-</u> page/pre-award-guidance."

8. U.S. MANUFACTURING REQUIREMENT

In addition to treatment of the U.S. Manufacturing Plan described above in Section IV.D.7 of the FOA, ARPA-E requires products embodying or produced through the use of subject inventions (i.e., inventions conceived or first actually reduced to practice under ARPA-E funding agreements) to be substantially manufactured in the United States by Project Teams and their licensees, as described below. The Applicant may request a modification or waiver of the U.S. Manufacturing Requirement.

a. Small Businesses

Small businesses (including Small Business Concerns) that are Prime Recipients or Subrecipients under ARPA-E funding agreements are required to substantially manufacture the following products in the United States for any use or sale in the United States: (1) products embodying subject inventions, and (2) products produced through the use of subject invention(s).⁸⁰ This requirement does not apply to products that are manufactured for use or sale outside the U.S. A.

Small businesses must apply the same U.S. Manufacturing requirements to their assignees, licensees, and entities acquiring a controlling interest in the small business. Small businesses must require their assignees and entities acquiring a controlling interest in the small business to apply the same U.S. Manufacturing requirements to their licensees.

b. Large Businesses and Foreign Entities

Large businesses and foreign entities that are Prime Recipients or Subrecipients under ARPA-E funding agreements are required to substantially manufacture the following products in the United States: (1) products embodying subject inventions, and (2) products produced through the use of subject invention(s).⁸¹ This requirement applies to products that are manufactured for use or sale in the United States and outside the United States.

Large businesses and foreign entities must apply the same U.S. Manufacturing requirements to their assignees, licensees, and entities acquiring a controlling interest in the large business or foreign entity. Large businesses and foreign entities must require their assignees and entities acquiring a controlling interest in the large business or foreign entity to apply the same U.S. Manufacturing requirements to their licensees.

c. Educational Institutions and Nonprofits

Domestic educational institutions and nonprofits that are Prime Recipients or Subrecipients under ARPA-E funding agreements must require their exclusive licensees to substantially

⁷³ Small businesses are generally defined as domestically incorporated entities that meet the criteria established by the U.S. Small Business Administration's "Table of Small Business Size Standards Matched to North American Industry Classification System Codes" (<u>http://www.sba.gov/content/small-business-size-standards</u>). Small businesses include Small Business Concerns, as defined in <u>Note 5</u>.

⁸¹ Large businesses are generally defined as domestically incorporated entities that do <u>not</u> meet the criteria established by the U.S. Small Business Administration's "Table of Small Business Size Standards Matched to North American Industry Classification System Codes" (<u>http://www.sba.gov/content/small-business-size-standards</u>).

manufacture the following products in the United States for any use or sale in the United States: (1) articles embodying subject inventions, and (2) articles produced through the use of subject invention(s). This requirement does not apply to articles that are manufactured for use or sale overseas.

Educational institutions and nonprofits must require their assignees to apply the same U.S. Manufacturing requirements to their exclusive licensees.

These U.S. Manufacturing requirements do not apply to nonexclusive licensees.

d. FFRDCs/DOE Labs and State and Local Government Entities

FFRDCs/DOE Labs that are GOCOs and state and local government entities are subject to the same U.S. Manufacturing requirements as domestic educational institutions and nonprofits. GOGOs are subject to the requirements in 37 CFR § 404.5(a)(2).

9. CORPORATE FELONY CONVICTIONS AND FEDERAL TAX LIABILITY

In submitting an application in response to this FOA, the Applicant represents that:

- It is not a corporation that has been convicted of a felony criminal violation under any Federal law within the preceding 24 months; and
- It is not a corporation that has any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability.

For purposes of these representations the following definitions apply: A Corporation includes any entity that has filed articles of incorporation in any of the 50 states, the District of Columbia, or the various territories of the United States [but not foreign corporations]. It includes both for-profit and non-profit organizations.

10. Applicant Risk Analysis

If selected for award negotiations, ARPA-E may evaluate the risks posed by the Applicant using the criteria set forth at 2 CFR §200.205(c), subparagraphs (1) through (4). ARPA-E may require special award terms and conditions depending upon results of the risk analysis.

11. RECIPIENT INTEGRITY AND PERFORMANCE MATTERS

Prior to making a Federal award with a total amount of Federal share greater than the simplified acquisition threshold (presently \$150,000), ARPA-E is required to review and consider any information about Applicants that is contained in the Office of Management and Budget's designated integrity and performance system accessible through SAM (currently the Federal Awardee Performance and Integrity Information System or FAPIIS) (41 U.S.C. § 2313 and 2 C.F.R. 200.205).

Applicants may review information in FAPIIS and comment on any information about itself that a Federal awarding agency previously entered into FAPIIS.

ARPA-E will consider any written comments provided by Applicants during award negotiations, in addition to the other information in FAPIIS, in making a judgment about an Applicant's integrity, business ethics, and record of performance under Federal awards when reviewing potential risk posed by Applicants as described in 2 C.F.R. §200.205.

12. NONDISCLOSURE AND CONFIDENTIALITY AGREEMENTS REPRESENTATIONS

In submitting an application in response to this FOA the Applicant <u>represents</u> that:

- (1) It does not and will not require its employees or contractors to sign internal nondisclosure or confidentiality agreements or statements prohibiting or otherwise restricting its employees or contractors from lawfully reporting waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.
- (2) It does not and will not use any Federal funds to implement or enforce any nondisclosure and/or confidentiality policy, form, or agreement it uses unless it contains the following provisions:
 - a. "These provisions are consistent with and do not supersede, conflict with, or otherwise alter the employee obligations, rights, or liabilities created by existing statute or Executive order relating to (1) classified information, (2) communications to Congress, (3) the reporting to an Inspector General of a violation of any law, rule, or regulation, or mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety, or (4) any other whistleblower protection. The definitions, requirements, obligations, rights, sanctions, and liabilities created by controlling Executive orders and statutory provisions are incorporated into this agreement and are controlling."

- b. The limitation above shall not contravene requirements applicable to Standard Form 312, Form 4414, or any other form issued by a Federal department or agency governing the nondisclosure of classified information.
- c. Notwithstanding provision listed in paragraph (a), a nondisclosure confidentiality policy form or agreement that is to be executed by a person connected with the conduct of an intelligence or intelligence-related activity, other than an employee or officer of the United States Government, may contain provisions appropriate to the particular activity for which such document is to be used. Such form or agreement shall, at a minimum, require that the person will not disclose any classified information received in the course of such activity unless specifically authorized to do so by the United States Government. Such nondisclosure or confidentiality forms shall also make it clear that they do not bar disclosure to congress, or to an authorized official of an executive agency or the Department of Justice, that are essential to reporting a substantial violation of law.

C. <u>Reporting</u>

[TO BE INSERTED BY FOA MODIFICATION IN JULY 2016]

Recipients are required to submit periodic, detailed reports on technical, financial, and other aspects of the project, as described in Attachment 4 to ARPA-E's Model Cooperative Agreement for SBIR/STTR Awards (<u>http://arpa-e.energy.gov/?q=arpa-e-site-page/award-guidance-sbir-</u> <u>sttr</u>).

VII. AGENCY CONTACTS

A. <u>COMMUNICATIONS WITH ARPA-E</u>

Upon the issuance of a FOA, only the Contracting Officer may communicate with Applicants. ARPA-E personnel and our support contractors are prohibited from communicating (in writing or otherwise) with Applicants regarding the FOA. This "quiet period" remains in effect until ARPA-E's public announcement of its project selections.

During the "quiet period," Applicants are required to submit all questions regarding this FOA to <u>ARPA-E-CO@hq.doe.gov</u>. Frequently Asked Questions (FAQs) about ARPA-E and its FOAs are available at <u>http://arpa-e.energy.gov/faq</u>. For questions that have not already been answered, please send an email with the FOA name and number in the subject line to <u>ARPA-E-CO@hq.doe.gov</u>. Due to the volume of questions received, ARPA-E will only answer pertinent questions that have not yet been answered and posted at the above link.

- ARPA-E will post responses on a weekly basis to any questions that are received that have not already been addressed at the link above. ARPA-E may re-phrase questions or consolidate similar questions for administrative purposes.
- ARPA-E will cease to accept questions approximately 5 business days in advance of each submission deadline. Responses to questions received before the cutoff will be posted approximately one business day in advance of the submission deadline. ARPA-E may re-phrase questions or consolidate similar questions for administrative purposes.
- Responses to questions specific to this FOA are posted to the "REFUEL SBIR/STTR FOA Questions and Answers" document on ARPA-E's website (<u>http://arpae.energy.gov/?q=faq/current-funding-opportunities</u>).

Applicants may submit questions regarding ARPA-E eXCHANGE, ARPA-E's online application portal, to <u>ExchangeHelp@hq.doe.gov</u>. ARPA-E will promptly respond to emails that raise legitimate, technical issues with ARPA-E eXCHANGE. ARPA-E will refer any questions regarding the FOA to <u>ARPA-E-CO@hq.doe.gov</u>.

ARPA-E will not accept or respond to communications received by other means (e.g., fax, telephone, mail, hand delivery). Emails sent to other email addresses will be disregarded.

During the "quiet period," only the Contracting Officer may authorize communications between ARPA-E personnel and Applicants. The Contracting Officer may communicate with Applicants as necessary and appropriate. As described in Section IV.A of the FOA, the Contracting Officer may arrange pre-selection meetings and/or site visits during the "quiet period."

B. <u>DEBRIEFINGS</u>

ARPA-E does not offer or provide debriefings. ARPA-E provides Applicants with a notification encouraging or discouraging the submission of a Full Application based on ARPA-E's assessment of the Concept Paper. In addition, ARPA-E provides Applicants with reviewer comments on Full Applications before the submission deadline for Replies to Reviewer Comments.

VIII. OTHER INFORMATION

A. FOAs AND FOA MODIFICATIONS

FOAs are posted on ARPA-E eXCHANGE (<u>https://arpa-e-foa.energy.gov/</u>), Grants.gov (<u>http://www.grants.gov/</u>), and FedConnect (<u>https://www.fedconnect.net/FedConnect/</u>), and the Government-wide SBIR/STTR website (<u>http://www.sbir.gov</u>). Any modifications to the FOA are also posted to these websites. You can receive an e-mail when a modification is posted by registering with FedConnect as an interested party for this FOA. It is recommended that you register as soon as possible after release of the FOA to ensure that you receive timely notice of any modifications or other announcements. More information is available at <u>https://www.fedconnect.net</u>.

B. OBLIGATION OF PUBLIC FUNDS

The Contracting Officer is the only individual who can make awards on behalf of ARPA-E or obligate ARPA-E to the expenditure of public funds. A commitment or obligation by any individual other than the Contracting Officer, either explicit or implied, is invalid.

ARPA-E awards may not be transferred, assigned, or assumed without the prior written consent of a Contracting Officer.

C. <u>REQUIREMENT FOR FULL AND COMPLETE DISCLOSURE</u>

Applicants are required to make a full and complete disclosure of the information requested in the Business Assurances & Disclosures Form. Disclosure of the requested information is mandatory. Any failure to make a full and complete disclosure of the requested information may result in:

- The rejection of a Concept Paper, Full Application, and/or Reply to Reviewer Comments;
- The termination of award negotiations;
- The modification, suspension, and/or termination of a funding agreement;
- The initiation of debarment proceedings, debarment, and/or a declaration of ineligibility for receipt of Federal contracts, subcontracts, and financial assistance and benefits; and

• Civil and/or criminal penalties.

D. <u>RETENTION OF SUBMISSIONS</u>

ARPA-E expects to retain copies of all Concept Papers, Full Applications, Replies to Reviewer Comments, and other submissions. No submissions will be returned. By applying to ARPA-E for funding, Applicants consent to ARPA-E's retention of their submissions.

E. MARKING OF CONFIDENTIAL INFORMATION

ARPA-E will use data and other information contained in Concept Papers, Full Applications, and Replies to Reviewer Comments strictly for evaluation purposes.

Concept Papers, Full Applications, Replies to Reviewer Comments, and other submissions containing confidential, proprietary, or privileged information must be marked as described below. Failure to comply with these marking requirements may result in the disclosure of the unmarked information under the Freedom of Information Act or otherwise. The U.S. Government is not liable for the disclosure or use of unmarked information, and may use or disclose such information for any purpose.

The cover sheet of the Concept Paper, Full Application, Reply to Reviewer Comments, or other submission must be marked as follows and identify the specific pages containing confidential, proprietary, or privileged information:

Notice of Restriction on Disclosure and Use of Data:

Pages [___] of this document may contain confidential, proprietary, or privileged information that is exempt from public disclosure. Such information shall be used or disclosed only for evaluation purposes or in accordance with a financial assistance or loan agreement between the submitter and the Government. The Government may use or disclose any information that is not appropriately marked or otherwise restricted, regardless of source.

The header and footer of every page that contains confidential, proprietary, or privileged information must be marked as follows: "Contains Confidential, Proprietary, or Privileged Information Exempt from Public Disclosure." In addition, every line and paragraph containing proprietary, privileged, or trade secret information must be clearly marked with double brackets or highlighting.

F. <u>TITLE TO SUBJECT INVENTIONS</u>

Ownership of subject inventions is governed pursuant to the authorities listed below. Typically, either by operation of law or under the authority of a patent waiver, Prime Recipients and Subrecipients may elect to retain title to their subject inventions under ARPA-E funding agreements.

- Domestic Small Businesses, Educational Institutions, and Nonprofits: Under the Bayh-Dole Act (35 U.S.C. § 200 et seq.), domestic small businesses, educational institutions, and nonprofits may elect to retain title to their subject inventions. If they elect to retain title, they must file a patent application in a timely fashion.
- All other parties: The Federal Non-Nuclear Energy Research and Development Act of 1974, 42. U.S.C. 5908, provides that the Government obtains title to new inventions unless a waiver is granted (*see below*).
- Class Waiver: Under 42 U.S.C. § 5908, title to subject inventions vests in the U.S. Government and large businesses and foreign entities do not have the automatic right to elect to retain title to subject inventions. However, ARPA-E typically issues "class patent waivers" under which large businesses and foreign entities that meet certain stated requirements may elect to retain title to their subject inventions. If a large business or foreign entity elects to retain title to its subject invention, it must file a patent application in a timely fashion. If the class waiver does not apply, a party may request a waiver in accordance with 10 C.F.R. §784.
- GOGOs are subject to the requirements of 37 CFR Part 501.
- Determination of Exceptional Circumstances (DEC): Each Applicant is required to submit a U.S. Manufacturing Plan as part of its application. The substantial U.S. manufacture provision included in Attachment 2 of an award is included as part of the U.S. Manufacturing Plan. If selected, the U.S. Manufacturing Plan shall be incorporated into the award terms and conditions for domestic small businesses and nonprofit organizations. DOE has determined that exceptional circumstances exist that warrants the modification of the standard patent rights clause for small businesses and non-profit awardees under Bayh-Dole to the extent necessary to implement and enforce the U.S. Manufacturing Plan. For example, the commitments and enforcement of a U.S. Manufacturing Plan may be tied to subject inventions. Any Bayh-Dole entity (domestic small business or nonprofit organization) affected by this DEC has the right to appeal it. The DEC is dated September 9, 2013 and is available at the following link:

http://energy.gov/gc/downloads/determination-exceptional-circumstances-underbayh-dole-act-energy-efficiency-renewable.

G. <u>GOVERNMENT RIGHTS IN SUBJECT INVENTIONS</u>

Where Prime Recipients and Subrecipients retain title to subject inventions, the U.S. Government retains certain rights.

1. GOVERNMENT USE LICENSE

The U.S. Government retains a nonexclusive, nontransferable, irrevocable, paid-up license to practice or have practiced for or on behalf of the United States any subject invention throughout the world. This license extends to contractors doing work on behalf of the Government.

2. MARCH-IN RIGHTS

The U.S. Government retains march-in rights with respect to all subject inventions. Through "march-in rights," the Government may require a Prime Recipient or Subrecipient who has elected to retain title to a subject invention (or their assignees or exclusive licensees), to grant a license for use of the invention. In addition, the Government may grant licenses for use of the subject invention when Prime Recipients, Subrecipients, or their assignees and exclusive licensees refuse to do so.

The U.S. Government may exercise its march-in rights if it determines that such action is necessary under any of the four following conditions:

- The owner or licensee has not taken or is not expected to take effective steps to achieve practical application of the invention within a reasonable time
- The owner or licensee has not taken action to alleviate health or safety needs in a reasonably satisfactory manner
- The owner has not met public use requirements specified by Federal statutes in a reasonably satisfactory manner
- The U.S. Manufacturing requirement has not been met

3. U.S. MANUFACTURING REQUIREMENT

ARPA-E requires that awards address whether products embodying or produced through the use of subject inventions (i.e., inventions conceived or first actually reduced to practice under ARPA-E funding agreements) are to be substantially manufactured in the United States by Project Teams and their licensees. The requirement varies depending upon whether an awardee is a small business, University or other type of awardee. The Applicant may request a modification or waiver of the U.S. Manufacturing Requirement.

H. <u>RIGHTS IN TECHNICAL DATA</u>

Data rights differ based on whether data is first produced under an award or instead was developed at private expense outside the award.

- Background or "Limited Rights Data": The U.S. Government will not normally require delivery of technical data developed solely at private expense prior to issuance of an award, except as necessary to monitor technical progress and evaluate the potential of proposed technologies to reach specific technical and cost metrics.
- Generated Data: The U.S. Government normally retains very broad rights in technical data produced under Government financial assistance awards, including the right to distribute to the public. However, pursuant to special statutory authority, certain categories of data generated under ARPA-E SBIR/STTR awards may be protected from public disclosure for up to four years from delivery of the last deliverables under the agreement. Such data should be clearly marked as described in Attachment 4 to ARPA-E's Model Cooperative Agreement for SBIR/STTR Awards (<u>http://arpa-e.energy.gov/?q=arpa-e-site-page/award-guidance-sbir-sttr</u>). In addition, invention disclosures may be protected from public disclosure for a reasonable time in order to allow for filing a patent application.

I. <u>PROTECTED PERSONALLY IDENTIFIABLE INFORMATION</u>

Applicants may not include any Protected Personally Identifiable Information (Protected PII) in their submissions to ARPA-E. Protected PII is defined as data that, if compromised, could cause harm to an individual such as identity theft. Listed below are examples of Protected PII that Applicants must not include in their submissions.

- Social Security Numbers in any form
- Place of Birth associated with an individual
- Date of Birth associated with an individual

- Mother's maiden name associated with an individual
- Biometric record associated with an individual
- Fingerprint
- Iris scan
- DNA
- Medical history information associated with an individual
- Medical conditions, including history of disease
- Metric information, e.g. weight, height, blood pressure
- Criminal history associated with an individual
- Ratings
- Disciplinary actions
- Performance elements and standards (or work expectations) are PII when they are so intertwined with performance appraisals that their disclosure would reveal an individual's performance appraisal
- Financial information associated with an individual
- Credit card numbers
- Bank account numbers
- Security clearance history or related information (not including actual clearances held)

J. ADDITIONAL NOTICES

- This FOA is intended for informational purposes and reflects current planning. If there is any inconsistency between the information contained herein and the terms of any resulting SBIR or STTR funding agreement, the terms of the funding agreement are controlling.
- Before award of an SBIR or STTR funding agreement, ARPA-E may request the selectee to submit certain organizational, management, personnel, and financial information to assure responsibility of the Prime Recipient. In addition, selectees will be required to make certain legal commitments at the time of execution of funding agreements resulting from this FOA. ARPA-E encourages Prime Recipients to review the Model Cooperative Agreement for SBIR/STTR Awards, which is available at <u>http://arpae.energy.gov/?q=arpa-e-site-page/award-guidance-sbir-sttr</u>.
- ARPA-E will not pay a fee or profit on Cooperative Agreements resulting from this FOA to recipients or subrecipients.

• Actual or suspected fraud, waste, or abuse may be reported to the DOE Office of Inspector General (OIG) at 1-800-541-1625.

K. <u>COMPLIANCE AUDIT REQUIREMENT</u>

A prime recipient organized as a for-profit entity expending \$750,000 or more of DOE funds in the entity's fiscal year (including funds expended as a Subrecipient) must have an annual compliance audit performed at the completion of its fiscal year. For additional information, refer to Subpart F of: (i) 2 C.F.R. Part 200, and (ii) 2 C.F.R. Part 910.

If an educational institution, non-profit organization, or state/local government is either a Prime Recipient or a Subrecipient, and has expended \$750,000 or more of Federal funds in the entity's fiscal year, the entity must have an annual compliance audit performed at the completion of its fiscal year. For additional information refer to Subpart F of 2 C.F.R. Part 200.

IX. GLOSSARY

Applicant: The Small Business Concern that submits the application to ARPA-E. In the case of a Project Team, the Applicant is the lead organization listed on the application.

Application: The entire submission received by ARPA-E, including the Concept Paper, Full Application, and Reply to Reviewer Comments.

ARPA-E: is the Advanced Research Projects Agency-Energy, an agency within the U.S. Department of Energy.

Cost Sharing: is the portion of project costs from non-Federal sources that are borne by the Prime Recipient (or non-Federal third parties on behalf of the Prime Recipient), rather than by the Federal Government.

Deliverable: A deliverable is the quantifiable goods or services that will be provided upon the successful completion of a project task or sub-task.

DOE: U.S. Department of Energy.

DOE/NNSA: U.S. Department of Energy/National Nuclear Security Administration

FFRDCs: Federally Funded Research and Development Centers.

FOA: Funding Opportunity Announcement.

GOCOs: U.S. Government Owned, Contractor Operated laboratories.

GOGOs: U.S. Government Owned, Government Operated laboratories.

Milestone: A milestone is the tangible, observable measurement that will be provided upon the successful completion of a project task or sub-task.

Prime Recipient: The signatory to the funding agreement with ARPA-E.

PI: Principal Investigator.

Project Team: A Project Team consists of the Prime Recipient, Subrecipients, and others performing inventive work that is part of an ARPA-E project.

SBA: U.S. Small Business Administration.

SBIR: Small Business Innovation Research Program.

Small Business Concern: A for-profit entity that: (1) maintains a place of business located in the United States; (2) operates primarily within the United States or makes a significant contribution to the United States economy through payment of taxes or use of American products, materials or labor; (3) is an individual proprietorship, partnership, corporation, limited liability company, joint venture, association, trust, or cooperative; and (4) meets the size eligibility requirements set forth in 13 C.F.R. § 121.702. Where the entity is formed as a joint venture, there can be no more than 49% participation by foreign business entities in the joint venture.

Standalone Applicant: An Applicant that applies for funding on its own, not as part of a Project Team.

STTR: Small Business Technology Transfer Program.

Subject Invention: Any invention conceived or first actually reduced to practice under an ARPA-E funding agreement.

Task: A task is an operation or segment of the work plan that requires both effort and resources. Each task (or sub-task) is connected to the overall objective of the project, via the achievement of a milestone or a deliverable.

Total Project Cost: The sum of the Prime Recipient share and the Federal Government share of total allowable costs. The Federal Government share generally includes costs incurred by GOGOs FFRDCs, and GOCOs.
