

**FINANCIAL ASSISTANCE  
FUNDING OPPORTUNITY ANNOUNCEMENT**

**ADVANCED RESEARCH PROJECTS AGENCY – ENERGY (ARPA-E)  
U.S. DEPARTMENT OF ENERGY**

***FACSIMILE APPEARANCE TO CREATE ENERGY SAVINGS (FACES)***

Announcement Type: ~~Modification 02~~ **Modification 03**

Funding Opportunity No. DE-FOA-0001714

CFDA Number 81.135

<b>Funding Opportunity Announcement (FOA) Issue Date:</b>	Thursday, December 8, 2016
<b>First Deadline for Questions to <a href="mailto:ARPA-E-CO@hq.doe.gov">ARPA-E-CO@hq.doe.gov</a>:</b>	5 PM ET, Friday January 6, 2017
<b>Submission Deadline for Concept Papers:</b>	5 PM ET, Tuesday January 17, 2017
<b>Second Deadline for Questions to <a href="mailto:ARPA-E-CO@hq.doe.gov">ARPA-E-CO@hq.doe.gov</a>:</b>	5 PM ET, Friday, April 14, 2017
<b>Submission Deadline for Full Applications:</b>	5 PM ET, Monday, April 24, 2017
<b>Submission Deadline for Replies to Reviewer Comments:</b>	<del>5 PM ET, Thursday, June 15, 2017</del>
<b>Expected Date for Selection Notifications:</b>	<del>July 2017</del> FOA Cancelled
<b>Total Amount to Be Awarded</b>	Approximately \$9.5 million, subject to the availability of appropriated funds.
<b>Anticipated Awards</b>	ARPA-E may issue one, multiple, or no awards under this FOA. Awards may vary between \$250,000 and \$9.5 million.

- For eligibility criteria, see Section III.A of the FOA.
- For cost share requirements under this FOA, see Section III.B of the FOA.
- To apply to this FOA, Applicants must register with and submit application materials through ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov/Registration.aspx>). For detailed guidance on using ARPA-E eXCHANGE, see Section IV.H.1 of the FOA.
- Applicants are responsible for meeting each submission deadline. Applicants are strongly encouraged to submit their applications at least 48 hours in advance of the submission deadline.
- For detailed guidance on compliance and responsiveness criteria, see Sections III.C.1 through III.C.3 of the FOA.

For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

## MODIFICATIONS

All modifications to the Funding Opportunity Announcement (FOA) are highlighted in yellow in the body of the FOA.

Mod. No.	Date	Description of Modifications
01	01/10/2017	<ul style="list-style-type: none"> <li>Extended the Submission Deadline for Concept Papers to January 17, 2016, see Cover page and Required Documents Checklist.</li> </ul>
02	3/10/2017	<ul style="list-style-type: none"> <li>Inserted certain deadlines, including the deadlines for submitting questions and Full Applications. See Cover Page and Required Documents Checklist.</li> <li>Revised the following sections of the FOA to provide guidance on required application forms and the content and form of Full Applications and Replies to Reviewer Comments: Required Documents Checklist and Sections IV.D, IV.E, and IV.G of the FOA. Applicants are strongly encouraged to use the templates provided on ARPA-E eXCHANGE (<a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a>).</li> <li>Inserted criteria that ARPA-E will use to evaluate Full Applications, see Section V.A.2 of the FOA.</li> <li>Inserted criteria that ARPA-E will use to evaluate Replies to Reviewer Comments in Section V.A.3 of the FOA.</li> <li>Inserted information on the anticipated announcement and award dates, see Section V.C of the FOA.</li> <li>Inserted information concerning Full Application Notifications, see Section VI.A.3 of the FOA.</li> <li>Inserted Administrative and National Policy Requirements, see Section VI.B of the FOA.</li> <li>Inserted Reporting Requirements, see Section VI.C of the FOA.</li> <li>Clarified timeframe and FAQ response location under Communications with ARPA-E, see Section VII.A of the FOA.</li> <li>Revised language for Rights in Technical Data, see Section VIII.H of the FOA.</li> <li>Provided clarification on third party evaluation for Categories 1 and 2, see Section I.F of the FOA.</li> </ul>
03	9/1/2017	<p>The Department of Energy has cancelled Funding Opportunity Announcement DE-FOA-0001714. Any pending applications made under this announcement will not be further considered. The cancellation of this funding opportunity is based on programmatic priorities and does not represent an assessment of the technical merits of any proposals submitted in response to the funding opportunity.</p> <p>Current ARPA-E and other Department of Energy funding opportunities are posted on grants.gov. ARPA-E funding opportunities are also posted on ARPA-E eXCHANGE (<a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a>). Please address any questions on these funding opportunities to the person or office listed on the respective announcement.</p>

## **I. FUNDING OPPORTUNITY DESCRIPTION**

### **A. AGENCY OVERVIEW**

The Advanced Research Projects Agency – Energy (ARPA-E), an organization within the Department of Energy (DOE), is chartered by Congress in the America COMPETES Act of 2007 (P.L. 110-69), as amended by the America COMPETES Reauthorization Act of 2010 (P.L. 111-358) to:

- “(A) to enhance the economic and energy security of the United States through the development of energy technologies that result in—
  - (i) reductions of imports of energy from foreign sources;
  - (ii) reductions of energy-related emissions, including greenhouse gases; and
  - (iii) improvement in the energy efficiency of all economic sectors; and
- (B) to ensure that the United States maintains a technological lead in developing and deploying advanced energy technologies.”

ARPA-E issues this Funding Opportunity Announcement (FOA) under the programmatic authorizing statute codified at 42 U.S.C. § 16538. The FOA and any awards made under this FOA are subject to 2 C.F.R. Part 200 as amended by 2 C.F.R. Part 910.

ARPA-E funds research on and the development of high-potential, high-impact energy technologies that are too early for private-sector investment. The agency focuses on technologies that can be meaningfully advanced with a modest investment over a defined period of time in order to catalyze the translation from scientific discovery to early-stage technology. For the latest news and information about ARPA-E, its programs and the research projects currently supported, see: <http://arpa-e.energy.gov/>.

**ARPA-E funds transformational research.** Existing energy technologies generally progress on established “learning curves” where refinements to a technology and the economies of scale that accrue as manufacturing and distribution to develop drive down the cost/performance metric in a gradual fashion. This continual improvement of a technology is important to its increased commercial deployment and is appropriately the focus of the private sector or the applied technology offices within DOE. By contrast, ARPA-E supports transformative research that has the potential to create fundamentally new learning curves. ARPA-E technology projects typically start with cost/performance estimates well above the level of an incumbent technology. Given the high risk inherent in these projects, many will fail to progress, but some may succeed in generating a new learning curve with a projected cost/performance metric that is significantly lower than that of the incumbent technology.

**ARPA-E funds technology with the potential to be disruptive in the marketplace.** The mere creation of a new learning curve does not ensure market penetration. Rather, the ultimate value of a technology is determined by the marketplace, and impactful technologies ultimately

become disruptive – that is, they are widely adopted and displace existing technologies from the marketplace or create entirely new markets. ARPA-E understands that definitive proof of market disruption takes time, particularly for energy technologies. Therefore, ARPA-E funds the development of technologies that, if technically successful, have the clear disruptive potential, e.g., by demonstrating capability for manufacturing at competitive cost and deployment at scale.

**ARPA-E funds applied research and development.** The Office of Management and Budget defines “applied research” as “systematic study to gain knowledge or understanding necessary to determine the means by which a recognized and specific need may be met” and defines “development” as the “systematic application of knowledge or understanding, directed toward the production of useful materials, devices, and systems or methods, including design, development, and improvement of prototypes and new processes to meet specific requirements.”<sup>1</sup> Applicants interested in receiving financial assistance for basic research should contact the DOE’s Office of Science (<http://science.energy.gov/>). Office of Science national scientific user facilities (<http://science.energy.gov/user-facilities/>) are open to all researchers, including ARPA-E applicants and awardees. These facilities provide advanced tools of modern science including accelerators, colliders, supercomputers, light sources and neutron sources, as well as facilities for studying the nanoworld, the environment, and the atmosphere. Projects focused on the improvement of existing technology platforms along defined roadmaps may be appropriate for support through the DOE offices such as: the Office of Energy Efficiency and Renewable Energy (<http://www.eere.energy.gov/>), the Office of Fossil Energy (<http://fossil.energy.gov/>), the Office of Nuclear Energy (<http://www.energy.gov/ne/office-nuclear-energy>), and the Office of Electricity Delivery and Energy Reliability (<http://energy.gov/oe/office-electricity-delivery-and-energy-reliability>).

## **B. PROGRAM OVERVIEW**

The objective of the FACES Program is to develop advanced information technologies which will dramatically reduce the need to travel for the purpose of communication, thereby reducing travel-related energy consumption and its associated greenhouse gas emissions, as well as increasing the efficiency of energy use and improving economic security.

Telecommunication technology has advanced significantly since the invention of the telegraph, yet we are still far from this ideal. Today’s telecommunication technologies still lack essential characteristics demanded by human interaction. ARPA-E believes that extraordinary technological shifts over the past two decades have created an opportunity to dramatically improve the utility of telecommunication technology.

This digital form of transportation has the potential to reduce communication-related travel energy consumption by several orders of magnitude because information networks consume

---

<sup>1</sup> OMB Circular A-11  
([http://www.whitehouse.gov/sites/default/files/omb/assets/a11\\_current\\_year/a11\\_2014.pdf](http://www.whitehouse.gov/sites/default/files/omb/assets/a11_current_year/a11_2014.pdf)), Section 84, p. 8.

substantially less energy than all traditional forms of transportation (such as planes, trains, and automobiles). Travel for the purpose of in-person communication is responsible for roughly 8% of the United States' energy consumption, so the ultimate success of this Program could yield a reduction in energy consumption of several quadrillion BTUs per year in the US alone.

Of essential importance is that an individual would prefer to use the "digital transportation" Technologies developed under the FACES Program rather than the energy-, time-, and cost-intensive status quo of physical travel, thereby providing a substantial incentive for market adoption. If the FACES Program is successful, the United States will benefit from the positive externalities of decreased dependence on petroleum and therefore increased energy security, decreased energy-related emissions, and increased efficiency of communication-related energy expenditure.

To achieve these goals, the FACES Technologies must provide an experience that meets or exceeds the current benefits of in-person interactions. ARPA-E believes that technical advances in computer technology, sensors, displays, computer graphics, and information networks, all of which have changed the world in their own right, will allow this high-quality communication across any distance.

The FACES Program will focus on communication systems employing "Digital Humans". A Digital Human (DH) is a bandwidth-efficient, three-dimensional digital representation of a person that is nearly indistinguishable from the communication partner in real life.

These DH communication systems must provide highly natural and immersive communication that is preferable to physically travelling, and have the potential to be very low cost in their implementation so that the average person can afford to communicate in this way. ARPA-E has identified three critical elements to developing DH communication systems as means of decreasing energy consumption (note: the following is a summary - the Technical Categories of Interest in Subsection E, and Performance Targets in Subsection F, below are controlling for application submissions):

1. ARPA-E seeks advances in real-time motion capture and digitization of the full human form, coupled with the real-time reconstruction and display of the resultant full human likeness at the other end of an information network, yielding an audiovisually-realistic DH-based digital transportation platform.
2. ARPA-E seeks innovative, complementary advances in the requisite Technology components of real-time capture, digitization, reconstruction, and other related hardware and software tools deemed necessary for or conducive to digital transportation.
3. ARPA-E seeks innovative studies of travel-replacement thresholds, new metrics for realism and immersion of telecommunications systems, and for systematic evaluation of DH technologies.

FACES Technologies will be subject to rigorous and quantitative evaluation metrics, and must demonstrate progress towards meeting travel-replacement thresholds. The development and use of the travel-replacement thresholds for digital transportation will be an important contribution of this Program.

(Section IX of the FOA provides an explanation of terms and concepts used in this FOA.)

## **C. BACKGROUND**

### **Transportation Energy Consumption and Emissions**

Over one-quarter of the energy-related emissions in the United States emanate from the activities of the transportation sector,<sup>2</sup> and transportation energy consumption is expected to continue to increase for the foreseeable future (Holtberg 2016).

An unavoidable aspect of nearly all present-day transportation technologies is that the energy source must be carried onboard the vehicle. Gasoline powers most automobiles; diesel powers most heavy-duty trucks; and jet fuel powers most airplanes.<sup>3</sup>

The dominance of these liquid fuels is a result of their enormous energy density and low cost. At 32 MJ/l, the energy density of gasoline is more than an order of magnitude higher than that of lithium-ion batteries and nearly 1000 times higher than uncompressed natural gas.<sup>4</sup>

There is substantial opportunity to improve upon the existing transportation supply chain in order to reduce the energy use in transportation. In its short history, ARPA-E has made several such investments, focusing on electric vehicle batteries, natural gas tanks and compressors, lightweighting, alternative fuel production methods with low lifecycle emissions, and autonomous vehicle powertrains, among others.<sup>5</sup> These Programs sought to create transformative changes within the present paradigm of automobiles and liquid transportation fuels, and have made several important contributions to date.

Another viable approach is to consider how we could satisfy, with much less energy-intensive technologies, the public's demand for transportation. A high level dichotomy of transportation energy expense is that of moving things versus moving people.

---

<sup>2</sup> <https://www.epa.gov/ghgemissions/us-greenhouse-gas-inventory-report-1990-2014>

<sup>3</sup> [http://www.eia.gov/Energyexplained/?page=us\\_energy\\_transportation](http://www.eia.gov/Energyexplained/?page=us_energy_transportation)

<sup>4</sup> [https://en.wikipedia.org/wiki/Energy\\_density](https://en.wikipedia.org/wiki/Energy_density)

<sup>5</sup> If further interested in ARPA-E transportation-related Programs, [visit our webpage](#) and search for BEEST, AMPED, MOVE, RANGE, LITECAR, Electrofuels, PETRO, REMOTE, TRANSNET, NEXTCAR or METALS.

1. Freight transportation results from a demand to have cargo physically exist in a place where it is not presently. This type of transportation is responsible for ~30% or 278 GW (8 quadrillion BTU/yr) of transportation energy expenditures.<sup>6</sup>
2. When people are transported, however, it is their presence that is demanded for one reason or another. Passenger transportation is responsible for ~70% or 568 GW (17 quads/yr) of transportation energy consumption.<sup>5,7</sup>

When presence is demanded it is either psychological or physical presence, or some combination of both. Our psychological perception of presence is the understanding of the environment and people therein that we derive through the eyes, ears, nose, mouth, and dermis. Our physical presence is our ability to use our bodies to interact with the physical environment. Both of these types of presence are very important, and in some cases very difficult to deconvolute.

For purposes of discussing the energy embodied in demand for passenger transportation, we propose a trichotomy based on these high-level objectives of passenger transportation:

1. Communication: We move from one place to another predominantly to convey or consume information, e.g. business trip, drive to office, etc.
2. Labor: We move from one place to another predominantly to interact physically with the environment, e.g. drive to factory, farm or restaurant, etc.
3. Experience: We move from one place to another predominantly to “experience”, e.g. trip to the beach, the Pantheon, or a religious gathering.

In an attempt to ascertain how much energy the U.S. uses for each of the objectives outlined above, ARPA-E performed a detailed analysis relying heavily on the National Household Transportation Survey.<sup>8</sup> For more details regarding how this ARPA-E analysis was performed, please refer to the Advanced Telepresence Request for Information from September 29th, 2015 on the ARPA-E website.

Figure 1 shows the breakdown of transportation energy consumption in the United States for 2011. Our analysis indicates that, of United States total energy consumption, roughly:

8% is associated with passenger transportation for communication (7.5 Q, 251 GW)  
5% is associated with passenger transportation to experience (4.9 Q, 164 GW), and  
5% is for labor objectives (4.6 Q, 154 GW), with some overlap between categories.

<sup>8</sup> National Household Transportation Survey. U.S. Department of Transportation. 2009 dataset.

It is on this basis that ARPA-E considers communication technologies as potential energy-reduction technologies. If we can develop ultra-low energy communications technologies that are preferable to today's practice of driving or flying for the purposes of in-person communication, we could substantially alter the course of increasing passenger transportation and dramatically improve U.S. economic competitiveness and environmental sustainability.

**Figure 1.** Transportation Energy Consumption, United States 2011

## Telecommunications Technologies and Travel Behavior

There has long been the demand to alleviate the burdens of travel. Travel costs time, it costs money, and it is often uncomfortable. Generally speaking, efforts to avoid travel burdens can follow two courses: one may invent ways to make the travel less burdensome, that is, faster, cheaper, or more convenient and comfortable; or one may find ways to avoid it altogether. Telecommunication has long been viewed as holding promise in the latter category.

The electronic telegraph, for example, surely diminished some of the need to take horse and carriage to deliver messages in the late 19th century. But, of course, the telegraph didn't eliminate travel altogether. As telecommunication has improved, with transformational technologies like the telephone, televideo, and the internet, there was increasing enthusiasm regarding the possibility of eliminating face-to-face meetings (Owen 1962; Harkness 1977; Murtishaw et al. 2001; van Wee 2015).

Over the same time period, there was a commensurate transformational improvement in passenger transportation technologies. In the 20th century alone, the world witnessed global proliferation of trains, automobiles, and planes. It is now possible, and frequently practiced, to travel across the United States and back in one day for a business meeting. A similar trip in the early 1800s would have taken several months. As transportation technologies continue to get faster, more comfortable, and more efficient, one would expect them to continue to be used more<sup>9</sup>. And, indeed, history shows as transportation technologies improved, miles traveled per capita and time spent travelling rose dramatically (Mokhtarian 2009).

Telecommunication and transportation technologies can therefore be seen in part as competing technologies, though in part they also augment each other (Mokhtarian 2009). Global commerce, for example, relies heavily on telecommunication to function. It also stands to reason that the additional connections made across the globe by our communication technologies have prompted additional need to travel long distances. In fact, long-distance business travel has grown to 1% of total U.S. energy use.<sup>7</sup>

A fundamental question remains regarding our desire to travel for in-person communication. Could there exist a telecommunication technology that we would prefer to physically travelling in most cases? If so, what minimum technology characteristics would be required to most effectively replace communication-related travel? If there existed a technology that would surpass this postulated travel-replacement threshold in a given circumstance, we would call it a digital transportation technology.

This question has not yet been answered definitively, and ARPA-E hopes to investigate it thoroughly with this Program. We have substantial reason to believe that such future advances in telecommunications could make considerable headway in decreasing passenger transportation.

## Digitizing Human Communication

Numerous studies seek to explain the limited ability of telecommunications technologies to replace in-person interactions. In general, they have hypothesized that telecommunications systems lack: 1) a true sense of presence one typically feels when co-located in a physical environment with other individuals; 2) the technical characteristics required to achieve an immersive environment which eliminates distractions from physical reality, thereby achieving the same level of focus one has in a face-to-face meeting; and 3) the fidelity of interaction between participants to achieve the naturalness and ease of conversation inherent to face-to-face communication (Kock 2004; Youngblut 2003).

Achieving presence, the psychological sense of being in an environment, requires that participants “experience the [virtual environment] as the more engaging reality than the surrounding physical world and consider the environment specified by the displays as places visited rather than as images seen.” (Slater & Wilbur 1997) To meet this standard of presence, a telecommunications technology must facilitate social presence (awareness of the other person) (Biocca et al. 2003), spatial presence (awareness of the environment) (Steuer 1992), and self-presence (awareness of one’s own self). (Cummings et al. 2015; Aymerich-Franch et al. 2012) In particular, social presence requires the ability to build connectedness and intimacy between individuals via sharing both verbal and nonverbal cues. The transference of information through conveyance of facial expressions, body language, vocal cues, gestures, etc. is generally understood to enable the communicating parties to engage in high value communication objectives not readily accomplished using just text or voice-based modalities (Bente 2008). Common scenarios that are difficult to accomplish with current telecommunications systems include building trust, communicating feelings, resolving conflicts, negotiating contracts, and exchanging sensitive information (Standaert et al. 2015).

Required for presence is a high degree of immersion facilitated by the technological characteristics of the communications modality (e.g. cell phone, monitors, commercial 3D displays, etc.). Achieving immersion requires eliminating distractions from the surrounding physical environment (Slater & Wilbur 1997) by enhancing specific technological aspects. Such characteristics include: field of view, scale, and resolution of the display; sound quality; update rate; user perspective; stereoscopic vision; tracking-level of the users, etc., and are easily measured by quantitative analysis (Cummings et al. 2015).

In contrast to the independent quantitative and psychological definitions of immersion and presence, naturalness aims to combine the features into a comprehensive, unifying theory. Inherent to achieving a natural telecommunications experience are 5 key features which can be directly mapped to technology characteristics (Kock 2004): 1) colocation, requiring spatial audio, realistic interpersonal distance, agency of the user; 2) synchronicity, the quick or immediate exchange of communicative information, requiring low latency communication; 3) conveyance and observance of facial expressions, requiring shared gaze and high fidelity

microexpressions; 4) conveyance and observance of body language, requiring posture, hand movement & expressions; and 5) conveyance and interpretation of speech, requiring high sound clarity, accurate voice timbre.

While presence, immersion, and naturalness are interconnected, each is necessary to comprehensively capture the required components of telecommunications.

The wealth of literature on these topics is consistent with efforts in the telecommunications industries to meet these requirements. For instance, audio quality has steadily improved with high-definition (aka 'wideband', 'superwideband', and 'fullband') audio now available on some networks and devices. Higher sampling rates and bit depths encompassing a wider range of speech frequencies have advanced sound quality beyond the 8 kHz sample rate and 8-bit depth commonly used for landline telecommunication (ITU-T G.711), reducing overlapping conversation and the cognitive load associated with differentiating between similar sounds (Cox et al. 2009). Enhanced video capabilities have been incorporated to convey the verbal and nonverbal cues thought necessary for intimate communication. State-of-the-art videoconferencing, such as the CISCO™ IX5000 Telepresence system<sup>10</sup> (first announced in 2014), can now transmit verbal and nonverbal cues using high-quality, 1080p60 video transmitted at data transmission rates of greater than 10,800 kbps, compared to 128 kbps required for low-quality video conferencing. Larger screen sizes also depict users as life-size, and additional functionality enables eye contact between participants. The enhanced presence and naturalness enabled by larger displays and higher quality video was shown to move the efficacy of the system closer to face-to-face communication in some instances (Standaert 2015). However, significant limitations still prohibit a truly natural experience: depiction of individuals is limited to the waist-up, other participants are displayed only in 2D, and the environment is only that portrayed on the screen. Despite increased utilization of more advanced videoconferencing systems, the required capital investment, high bandwidth connections, and dedicated infrastructure limits more wide-scale adoption.

Virtual environments, such as Linden Lab's Second Life™<sup>11</sup>, have also enabled digital communication. These platforms require much less bandwidth than videoconferencing by representing the users as digital, animated characters. The effects on communication (attention, trust, collaboration, etc.) influenced by incorporating digital representations of users has been widely studied with varying results. We direct the reader to the numerous review articles citing and cited by Bente et al. (Bente 2008). However, a key limitation of virtual environments is the absence of realistic representations of the user and other communicating participants, limiting the ability to achieve true self- and social presence.

---

<sup>10</sup> ARPA-E has included the names of products and companies in this FOA to illustrate the current state of the art in this field. Inclusion of these trademarks is not a government endorsement of the trademarked products or company names, and trademark owners have not endorsed the purpose of the FACES FOA.

<sup>11</sup> <http://secondlife.com/>

More recently, similar systems have been developed using head mounted displays, enabling higher degrees of presence and immersion in a 3D environment (Bailenson 2016). Higher immersion is attributed to the increased ability of 3D systems to eliminate distractions from the surrounding physical environment. Enhanced social presence is facilitated by the ability to see a full individual in 3D, interact collaboratively, and manipulate the 3D environment. In fact, the recent “Dell and Intel Future Workforce Global Study” found that 66% of global employees would be willing to use virtual or augmented reality in their professional lives (PBS Research 2016).

To merge the level of immersion capable in 3D environments with the visual fidelity of information transferred by high-quality video, we look towards developing a DH with the necessary qualities of photorealism, human-like representation, and behavior consistent with the levels of fidelity expected from in-person interactions. In a 3D environment, developing a realistic DH enables higher degrees of naturalness by more realistically conveying body language, facial expressions, and hand motions. Also allowed is interaction between participants, achieving necessary abilities like variation of interpersonal distance, eye contact, collaboration on challenging tasks, etc. In a 2D environment like a digital display, the DH inherently requires less bandwidth than 4k video.

Fully digitizing all aspects of the animated communicative human form could yield tremendous progress towards replacing travel with digital transportation technologies.

### **State of the Art of Digital Human Construction and Animation**

Tremendous strides have been made in the art of performance capture and digitization of humans in the gaming and film industries over the last two decades. Gamemakers and filmmakers who employ digital graphics characters have pushed the boundary of what is technically feasible in realism, naturalness, and rendering of humans to achieve better entertainment experiences for their audiences. It is important to note that these industries are not bound by the constraint of real time visualization or operation in the same way a communication technology is, as their goal is primarily to produce entertaining content that is consumed with at most minimal interaction (for example, through a game controller). Therefore much of their graphics work is done ex situ by graphics engineers and rendering farms out of convenience.

Research towards a true DH has yielded compelling prototypes, which have demonstrated the ability to capture the state of a performer with very high fidelity, both statically and dynamically. Generally, the performer is detected by some array of sensors, digitized as a set of blendshapes corresponding to a prefabricated, high-fidelity rig of the performer, and then later reconstructed in a digital environment for display. Modern graphics cards have demonstrated the ability to reconstruct and display a DH in real time<sup>12</sup>.

---

<sup>12</sup> NVIDIA GTC 2013 Keynote: <https://www.youtube.com/watch?v=5d1ZOYU4gpo>

For example, the Digital Ira project, developed by The Institute for Creative Technologies at the University of Southern California in conjunction with NVIDIA™ and Activision™, serves as one of the most photorealistic DH models demonstrated to date (Figure 2). Numerous research groups have built on this realism by developing effective wrinkle modelers (Cao et al. 2015, Nagano et al. 2015), gaze trackers and compensators (Kuster et al. 2012), and hair modelers (Luo et al. 2013).

Challenges remain in translating these DH prototypes into a digital transportation platform. Capture methods sometimes require cumbersome sensor configurations or markers, digitization is sometimes done ex situ from the performance capture data, hair is often omitted, only select parts of the body are captured in high fidelity, precise mouth movements are lacking, and details around the eyes and mouth during expressions leaves something to be desired. Advances in all of these areas are required to achieve a DH-based digital transportation technology.

**Figure 2.** Digital Ira represents the state of the art for extremely high quality digital human representation. For more information see <http://ict.usc.edu/prototypes/digital-ira/>.

The principle behind using DHs in a communication platform follows a generic workflow that applies to all telepresence platforms. Figure 3 shows this workflow schematically. This 7-step process consists of capture, digitization, network upload, server-side operations, network

download, reconstruction, and display. The network upload and download steps are assumed to follow internet protocols and will not be discussed or investigated as part of this FOA.

Experts in a variety of industries have made tremendous progress in each of the remaining steps. The following is an attempt to describe the state of the art of each as it pertains to the objective of creating a DH-based digital transportation platform. This summary does not capture all of the salient work that has been done in this space. ARPA-E expects Applicants to familiarize themselves with all prior art relevant to their submission, and requires submissions to represent substantial contributions to advancing the state of the art, not merely incremental improvements.

### Capture

Static capture of a subject and rigging of a DH is mature art with many methods available. The Digital Ira project is one example (Alexander et al., 2013) of high quality capture and construction of a DH from a Lightstage<sup>TM13</sup>. Other lower fidelity examples, which still require improvement, include using multiple low-quality photographs from a camera phone (Cao et al., 2016) and using 2D video footage (Ichim et. al, 2015). ARPA-E will focus primarily on motion capture (mocap) for this FOA.

The entertainment industry has a number of solutions for capturing the movements, gestures, and general state of a performer. Commonly used body-mounted capture devices require a number of fiducial markers to be placed on the face and body, e.g. those from Vicon<sup>TM14</sup>, PhaseSpace<sup>TM15</sup>, OptiTrack<sup>TM16</sup>, etc. Rooms can be fully instrumented with mocap sensors, offering large performance areas and the potential for tracking several people concurrently. While these mocap systems have matured and yield excellent precision, structured environments and fiducial markers present a challenge for wide proliferation of DH communication platforms. The ideal mocap system would not require any structuring of the environment or modification of the performer. Markerless mocap systems have been demonstrated with reasonable quality, for example researchers have used commodity-grade digital cameras employing machine vision, Microsoft Kinect<sup>TM</sup>, and Intel RealSense<sup>TM</sup> to capture motion information for digitization. Purpose-built mocap sensors have been made to capture hand movements, e.g. Leap Motion<sup>TM</sup>. Eye gaze tracking sensors have successfully been demonstrated inside head mounted displays by Fove and others. Markerless mocap still requires substantial improvement to yield the accuracy and precision ARPA-E believes is necessary.

1. Capture	2. Digitization	3. Network Upload	4. Server-Side Operations	5. Network Download	6. Reconstruction	7. Display
---------------	--------------------	-------------------------	---------------------------------	---------------------------	----------------------	---------------

<sup>13</sup> <https://home.otoy.com/capture/lightstage/>

<sup>14</sup> <https://www.vicon.com/>

<sup>15</sup> <http://www.phasespace.com/>

<sup>16</sup> <http://optitrack.com/>

**Figure 3:** The Digital Transportation workflow requires these seven steps to be performed in series. The capture-to-display latency must be below values that make humans uncomfortable when communicating, which have been shown to be around 150 ms (International Telecommunication Union, 2003).

### **Digitization**

The digitization step takes raw captured data and turns it into sensible instructions for a computer on the other end of an information network to reconstruct the DH. Some methods for static digitization of a person are well developed, such as those used in the Digital Ira project. The most mature methods employ deep knowledge of human facial expressions, e.g. the Facial Action Coding System (FACS) poses (Hjortsjo, 1970; Ekman and Friesen, 1978) to generate a “basis set” of blendshapes that can be weighted to construct any facial geometry in combination. Simply transmitting blendshape weights for reconstruction dramatically reduces bandwidth requirements of high quality visual information transmission. Other methods employ a musculoskeletal model of the head anatomy to yield high quality static digital representations of people, such as those used in the BabyX project (Sagar et al, 2014) and to reconstruct faces for forensic analysis (Wilkinson 2004). These methods may have the advantage of more natural facial expression and the capacity for predictive modeling of dynamic facial physics to smooth out short network disruptions.

Digitization of motion capture information is less advanced. Digital Ira, for example, used 6 video feeds for markerless mocap, yet calculated blendshape weights ex situ. Calculating optimal blendshape weights in real time has proved to be challenging computationally, and diminishing returns on communication experience in relation to the tradeoff between blendshape-weight accuracy and digitization latency have not been explored. Additional digitization methods to increase realism and naturalness include wrinkle modeling, skin modeling, and hair modeling. ARPA-E expects substantial improvements to the state of the art in real time digitization will be required to achieve the levels of realism and naturalness called for by the FACES Program.

### **Server-side operations**

The backbone of a functional end-to-end DH communication system is the server that manages the digitized information flowing to and from various clients. Information can be simply “passed through”, as is primarily the case with 2D televideo codec transmission services like Skype™, Facetime™, Hangouts™, etc. In more complicated communication environments, such as those developed by SecondLife™, AltspaceVR™, and HighFidelity™, more operations are performed on the server. These include reconciling virtual physics, adding virtual effects or objects, correcting gaze and other virtual “fixes”, and yield customizable, highly interactive, server-hosted virtual environments for communication.

### **Reconstruction**

When digitized information is received over an information network, it must be reconstructed into a DH that is real and natural enough to provide a high quality communicative experience.

This step is intimately tied to the digitization step, as they must cooperate to display the captured information in an agreeable form to an observer. Graphics processing is essential for effective reconstruction of the real-time DH model, which requires substantial computing power. Modern graphics processing has demonstrated the ability to reconstruct characters based on digitized instructions in extremely high detail in real time on consumer hardware. Graphics processing is now cheaper and more efficient than ever before; the average cost per gigaflop of computing power has continued its exponential decrease for the last 70 years (Nordhaus, 2007), and energy required for this computation has continued to decrease exponentially over this same period (Koomey et al, 2011). For this reason, we believe that graphics computational power per watt will proceed to levels necessary for future digital transportation systems without ARPA-E investment.

### **Display**

The display of audiovisual information to an observer using a digital transportation platform should be, to a large extent, consistent with the display of entertainment content. Display technology is advancing at a rapid pace, and ARPA-E expects that all commercially available display technologies are on a development path that does not need further government investment. These include, but are not limited to, high definition 2D displays used for monitors, cell phones, and televisions, consumer 3D displays, closed-view head mounted displays like the Oculus Rift™ and the HTC Vive™, open-view augmented reality displays like the Microsoft HoloLens™, virtual reality cave and projector technologies, and several others. ARPA-E believes there are underfunded display categories that are not currently commercially available, such as true holographic displays, direct retinal projection, true light field displays, and displays that have features such as the ability to occlude bright real-world objects in an augmented reality display scenario. Future display concepts are expected to be necessary to solve inherent problems or inconveniences associated with commercially available display technologies, such as the vergence-accommodation conflict (Hoffman et al., 2008) or the necessity to wear a display as is the case with all modern head mounted displays.

## **D. PROGRAM OBJECTIVES**

The FACES Program aims to accelerate the development of photorealistic, low cost, natural and immersive DH communication systems that people would prefer to use rather than physically traveling for communication purposes, thereby obviating the energy and emissions associated with travel for in-person communication and improving U.S. energy and economic security.

ARPA-E believes that significant energy and emissions reductions via digital transportation are within reach given recent advances in energy efficiency of information networks; cost reductions in computer hardware and dramatic increases in processing and computational power; decreasing display costs and increasing display quality; and an increased understanding of how computer graphics technology can create lifelike digital representations of humans in natural motion.

The FACES Program will focus solely on communication systems employing DH, as opposed to high-resolution 2- or 3D video transmission. The potential advantages of DH-based communication systems are as follows:

1. **High bandwidth efficiency:** only minimal data detailing how to move the DH is required to convey communicative information
2. **Eye contact, gaze:** effectively simulate gaze angle and shared gaze, allow for communication through the eyes
3. **Convey detailed facial expressions:** detailed facial reconstruction in real-time will allow for accurate communication through facial expressions and microexpressions
4. **Posture:** full-body reconstruction will enable greater use of postural communication
5. **Body language:** full body motion capture will enable communication through gestures and other body language
6. **User agency:** users gain the ability to move themselves in a virtual space and change viewing perspective or location
7. **Interpersonal distance:** ability to choose interpersonal distance with DH is communicative
8. **Scalable display resolution:** the DH reconstruction can be scaled to arbitrarily high display resolution without increasing transmission bandwidth
9. **Inherently a 3D object:** a DH by definition exists in the same dimensionality as real life
10. **Immersive display:** 3D digital representations are conducive to immersive audiovisual displays
11. **Cross-platform compatibility:** a DH can be immersed in a 3D virtual space (e.g. a conference room) or displayed on a 2D screen like traditional televideo
12. **True-to-life representation:** viewing angles and lighting can be rendered digitally so one is not constrained to specific view angles or poor lighting that can lead to unflattering representations

The DH-based communication systems to be developed in the FACES Program must provide highly natural and immersive communication, be preferable to physically travelling, and have the potential to be very low cost so that average people could conceivably afford to communicate this way.

Specific objectives of the FACES Program are:

- **Increase realism of digital humans:** ARPA-E seeks to increase the extent to which a DH-based communications platform can reproduce the interactions inherent in face-to-face communication. A critical component is the development of a photorealistic DH, captured, digitized, and rendered in real-time. Technologies proposed in FACES should have the ability to capture and display a full human that is perceived as true-to-life.
- **Ensure decreased transportation energy and emissions:** Of essential importance is that users would prefer the FACES method of telecommunication over physically travelling. Adoption of such communications platforms requires a substantial increase in the naturalness of DHs to nearly perfect levels, though a quantitative description of diminishing returns on perceived quality does not exist. Parallel evaluation of FACES

Technologies is necessary to assess likelihood of adoption and likelihood, if adopted, to replace travel. The FACES Program will explore individual communication Technology characteristics to correlate levels of realism, immersion, and naturalness to the likelihood of user adoption and travel replacement.

- **Enable real-time motion capture and digitization of digital humans:** ARPA-E expects motion capture and digitization to be done in real-time with extremely high quality and accuracy. For interpersonal communication, there exists an expectation of simultaneity which requires digitization computations to be performed extremely quickly. The motion capture technologies are expected to have the ability to be integrated into a display, and the performance area must be commensurate with the display viewing area. For instance, while it is not uncommon to have a conversation while sitting at one's desk, the Technology should consider the possibility that the sitting person may stand or move around during the course of such a conversation while still in view of the display.
- **Increase immersion of digital transportation systems:** The DH communication Technologies developed under the FACES Program should enable a sense of presence or of "being there" in a digital environment in a fashion that "shuts out physical reality" (Lombard & Ditton 1997). FACES seeks to advance these specific technical components which include, but are not limited to, tracking-level, field of view, sound quality, update rate, user perspective, resolution, and stereoscopic vision.
- **Increase presence in digital systems:** The DH communication Technologies should enable a sense of presence in the digital environment, presence with other users of the environment, and self-presence, maintaining awareness of oneself within the environment. Achieving the multiple dimensions of presence is predicated on the fidelity of the DH and the immersion characteristics of the platform.
- **Develop quantitative "travel-replacement thresholds":** ARPA-E is interested in developing a set of quantitative travel-replacement criteria which a DH communication platform must meet in order for people to choose it over traveling for communication purposes. These thresholds will serve as guidance for FACES Technology developers to focus their efforts in the second year of the Program.
- **Decrease system cost:** Adoption of digital communication Technologies requires that the commercial cost must be able to be equal to or less than today's widely adopted consumer telecommunications technologies if they were to reach high-volume production scale (e.g. personal computers, home televisions, cell phones, etc.).
- **Ensure interoperability:** The Technologies funded under FACES must be portable across current or anticipated hardware and software. This includes, but is not limited to, commercially available displays, head-mounted displays, graphics cards, operating systems, computer chipsets, virtual world platforms, gaming engines, etc.

## **E. TECHNICAL CATEGORIES OF INTEREST**

ARPA-E seeks to fund innovative approaches to generate low-cost, natural and immersive DH communication systems that obviate the need for travel-related energy use in a substantial number of cases. In order to achieve this goal, ARPA-E has identified three Technical Categories of Interest:

1. Real-time capture, digitization, and reconstruction of a human
2. Complementary digital transportation Technologies
3. Travel-replacement Thresholds and Technology Evaluation

### **Category 1: Real-time capture, digitization, and reconstruction of a human**

**General description:** Advances in real-time markerless capture, digitization, and reconstruction of a full human in motion are essential to decrease transportation-related energy usage. We expect solutions will need to meet or exceed the naturalness and immersion of in-person communication in order to displace travel. Applicants applying to Category 1 may propose either a technology demonstration project with a period of performance up to 36 months or an initial proof of concept demonstration project with a period of performance of up to 18 months. Projects that demonstrate significant success may have the potential to receive follow-on funding, subject to the availability of funds..

Category 1 requires:

- Markerless capture and digitization of a participant's physical likeness and movement, with strong emphasis on capturing and accurately reproducing the face in live motion
- Network upload, transmission, and download
- Reconstruction and display of a participant's likeness maintaining a high level of naturalness at high display resolution, in real time

Solutions proposed in Category 1 are expected to incorporate, at a minimum:

- Real-time markerless capture of nonverbal behavior: e.g. facial expressions (including microexpressions), head and body movement, posture, gestures, etc.
- Gaze direction and shared gaze
- Potential for display-integration of capture technology in future displays
- Capability to capture under variable lighting with moving subject in defined space
- Accurate mouth and tongue movement
- Real-time reconstruction of all non-occluded body parts relevant to verbal and nonverbal communication
- Real-time reconstruction and display of high-resolution facial features (e.g. wrinkles, hair, pores, mouth, and accurate tongue behaviors)

- Ability to immerse a DH in any lighting environment, to include skin translucence effects based on subsurface scattering, accurate diffuse and specular lighting interactions for multilayer skin structure
- Ability to port into environments with a large number of participants
- Portability across multiple display modalities – e.g. two-dimensional displays of various sizes, stereoscopic displays, light field displays, etc.
- Ability to integrate into virtual environments
- Highly bandwidth-efficient transmission

Applicants may consider a priori capture and building of a digital model; if so, approaches to generating and updating these models should be discussed.

Testing of Category 1 Technologies will require:

- Demonstration of high quality, real-time, bidirectional communication between two people through DHs using several different display modalities
- Demonstration of high quality, real-time, bidirectional communication for a group of five DHs using several different display modalities
- Evaluation of DH Technologies using in-house capabilities or those of an independent third party
- Demonstration of progress towards meeting the travel-replacement thresholds determined by ARPA-E, which may be determined based on research outcomes performed by Category 3 Awardees
- Initial hypothesis for commercialization strategy, including target customer, value proposition, barriers to adoption, and required partner ecosystem for productization and adoption

## Category 2: Complementary digital transportation Technologies

**General description:** Additional Technologies may be beneficial or necessary to the ultimate success of digital transportation displacing physical travel. Category 2 seeks Technologies that will complement developments from Category 1, which the applicant argues will substantially increase the likelihood of technology adoption and associated travel reduction. Submissions to Category 2 must represent dramatic and unequivocal advances to the state of the art. Applicants applying to Category 2 may only propose an initial proof of concept demonstration project with a period of performance of up to 18 months and a budget of less than \$1M. Projects that demonstrate significant success may have the potential to receive follow-on funding, subject to the availability of funds.

Of specific interest in Category 2 are Technologies which accelerate the development of digital transportation and realize the objectives of FACES. ARPA-E will consider complementary component-level advances in the digital transportation workflow (i.e. one, or a combination of: capture, digitization, server-side operations, reconstruction and display).

Examples of such Technologies of interest in Category 2 may include and are not limited to:

- **Capture:** Advanced markerless capture of the body's state, such as technologies and interfaces to recognize and convey extra-sensory information (pulse, tone, level of interest, attentiveness, etc.), non-visual means of capturing body state (e.g. audio extraction of facial features)
- **Digitization:** Novel methods for data reduction or augmentation of the captured content
- **Server-side operations:** physics models of interaction, 3D or 360 degree immersive video transmission-based communications solutions with extremely low bandwidth usage
- **Reconstruction:** occlusion solutions, optimized apportioning of server-side machines for increased DH-based communications performance, predictive modelers for expressive facial behavior, high fidelity skin, hair and clothing modeling
- **Display:** holographic displays, technologies to avoid vergence-accommodation conflict or other display inadequacies (e.g. lightfield displays), incorporation of local surroundings
- **System integration and usability:** technologies for translating additional senses (e.g. scent); technologies for easily creating and manipulating extremely high quality DHs, worlds, or objects with minimal cost and effort

**N.B. The examples provided above are purely illustrative and not meant to prescribe or limit the scope of proposed advances. ARPA-E may make one, multiple, or no awards that qualify as complementary advances to digital transportation objectives.**

Applicants in Category 2 are required to describe:

- The potential impact that the proposed project would have on the FACES objectives
- The proposed Technology, including its basic operating principles, how it is unique and innovative, and why it represents a substantial improvement over the state of the art.
- The proposed Technology's target level of performance (Applicants should provide technical data or other support to show how the proposed target will be met)
- A path towards integration with Category 1 efforts for bidirectional communication
- The current state-of-the-art in the relevant field and application, including key shortcomings, limitations, and challenges
- How the proposed Technology will overcome the shortcomings, limitations, and challenges in the relevant field and application
- The key technical risks/issues associated with the proposed Technology development plan
- Why ARPA-E funding is needed for the success of the proposed project
- Initial hypothesis for commercialization strategy, including target customer, value proposition, barriers to adoption, and required partner ecosystem for productization and adoption

### Category 3: Travel-replacement Thresholds and Technology Evaluation

**General description:** Despite the expanse of literature examining how interpersonal interaction varies in digital environments and what characteristics are necessary to achieve communicative levels which meet those of face-to-face communications, no studies have systematically evaluated how to achieve reduction of travel. In fact, as more immersive telecommunications technologies have achieved higher market penetration, U.S. travel per capita has continued to rise. Thus, ARPA-E aims to determine what qualities are necessary to reduce travel per capita, not purely sustain user adoption. Applicants applying to Category 3 may propose a technology demonstration project with a period of performance up to 36 months. Projects that demonstrate significant success may have the potential to receive follow-on funding, subject to the availability of funds.

Reducing travel is dependent on the ability of a communications technology to achieve the types of communications that still necessitate face-to-face interactions. While text-based and video-based modes currently allow participants to accomplish tasks, routinely exchange information, and find solutions to problems, these technologies are limited in their ability to facilitate building trust, communicating feelings, resolving conflicts, negotiating contracts, and exchanging sensitive information (Standaert et al. 2015). Furthermore, conversations between groups of people necessitate sharing of communicative information in ways that may differ from requirements of one-on-one communication.

ARPA-E seeks submissions which leverage state-of-the-art digital communications and travel behavior research. Category 3 Awardees' research may independently and objectively inform the Technology development paths of Category 1 and Category 2. Specifically, ARPA-E is interested in determining which technical aspects of a digital communications system are most strongly correlated to likelihood of adoption, sustained utilization, and resulting reduction of travel. Category 3 Awardees will be expected to assess technical and communicative aspects of interaction between 2 - 5 users of a digital communications system.

The aims of the Technology evaluation are to:

1. Define travel-replacement thresholds by identifying the minimum set of characteristics digital communications technologies must exhibit to replace face-to-face communication to satisfy various communication objectives
2. Quantify the realism of the DH and immersion of the communications modalities against characteristics defined by the travel-replacement threshold(s)
3. Assess likelihood of sustained user adoption and correlated impact on travel behavior via real-world longitudinal user acceptance studies

### **1. Travel-Replacement Thresholds:**

ARPA-E aims to develop a system with a path to reduce travel in business environments by 25% (for instance: 1 week/month travel replaced by digital communications or 25% of employees exclusively using digital transportation). Reduction of travel-related energy and emissions to this extent requires defining the characteristics necessary to increase the likelihood of a participant to use DH Technologies in such a manner.

Examples of relevant questions that may require further research include:

- What limits adoption and use of current telecommunications technologies?
  - e.g. Why do individuals prefer to face-to-face communication and the qualities inherent to such communication?
- Why don't current telecommunications technologies reduce travel?
- What is necessary in a telecommunications technology to replace at least 25% of communication-related business travel?
  - How do specific characteristics differ based on the communications objective, related to the specific task, number of people, etc.?
- How can DH Technologies meet these requirements?
- What are key Technology characteristics and limitations correlated to participant adoption?
  - e.g. How necessary is conveyance of microexpressions, hand gestures; body language, etc. in building trust and having difficult conversations?

### **2. Naturalness assessment of DH communication system:**

Achieving a quantitative threshold to replace travel is predicated on a realistic DH appearing and behaving in a natural manner and the communications system achieving a sense of immersion such that the participant is unaware that the immediate environment is mediated by a Technology platform.

To date, no group has achieved a fully realistic DH to enable an understanding of its impact on telecommunication. To evaluate progress towards the levels of realism defined in Category 1, new methodologies of realism evaluation are expected. These include qualitative studies such as self-report and quantitative procedures using measurable cognitive and physiological parameters. Quantitative evaluation can provide more nuanced information on user interaction and relative efficacy of the telecommunications system. For instance, one can imagine systematically varying DH realism to evaluate user trust based on cognitive processing and physiological measures.

Immersion and presence studies have been more widely implemented to study the ability of a communications platform to achieve the fidelity of face-to-face communications. We direct the Applicant to references in this FOA for state-of-the-art studies and meta analyses assessing these areas. Over the course of the project, Awardees will be expected to evaluate DH Technologies using systematic evaluation of Technology characteristics such as tracking-level, field of view, sound quality, update rate, user perspective, resolution, stereoscopic vision, etc.

Similar incorporation of quantitative and qualitative measures is expected when evaluating such characteristics.

Over the project period, Awardees are expected to:

- Define a baseline comparison utilizing state-of-the-art technologies and well-defined communications evaluation methods
- Systematically evaluate state-of-the-art DH realism and identify limitations and requirements to achieve full realism
- Provide independently and objectively determined metrics to ARPA-E to guide realism evaluation
- Provide independently and objectively determined metrics to ARPA-E to guide naturalness and immersion evaluation of the digital communications systems
- Assess viability of metrics across different communications objectives (e.g. communicating information, giving instructions, building trust, carrying out tasks, etc.) and different-sized user groups (2 - 5 users)

### **3. Ensure Progress towards Travel Replacement:**

As Technologies advance to meet the Program goals set forth in Category 1 and 2, real-world evaluation and longitudinal studies are required to assess the impact of virtual environments on users, fidelity of the communications, and the ability of the platform to achieve 25% travel reduction. Evaluation of Category 1 and 2 Technologies may be offered by Category 3 Awardees in real-world environments (e.g. university, corporate, government offices, etc.) with a user base indicative of potential future adopters.

## F. TECHNICAL PERFORMANCE TARGETS

Only Technologies with the potential to be transformational and eventually meet or exceed the FACES Program objectives will be considered for funding.

### Category 1: Real-time capture, digitization, and reconstruction of a human

Submissions for Category 1 funding should constitute complete DH-based communication systems built upon substantial advances to the state of the art in real-time motion capture, digitization, and reconstruction of DHs.

**Table 1: Category 1 Technical Performance Targets**

Metric	Description	Target
Capture and Digitization		
1.1	Motion capture	<ul style="list-style-type: none"><li>• Full body, including detailed face, mouth, hands, and limb tracking</li><li>• No mocap dropouts or hanging (may require multiple sensors, predictive models, etc.)</li></ul>
1.2	High tracking accuracy	<ul style="list-style-type: none"><li>• Near perfect capture of position and orientation of head, arms, torso, legs, feet, hands and fingers, to be accurate enough to convey all communicative information and not feel uncanny</li><li>• No applied or worn markers allowed for operation</li></ul>
1.3	Ease of use	<ul style="list-style-type: none"><li>• Potential for future integration of fundamental capture technology into future display unit</li><li>• Capability to perform without wearables, tracking aids, or controllers</li></ul>
Reconstruction and Display		
1.4	Reconstruction resolution	<ul style="list-style-type: none"><li>• Real time rendering capability for 1 arcminute resolution display at up to 120 Hz (intended to be beyond perceptual limits, cf. Messina 2006)</li></ul>
1.5	DH Realism	<ul style="list-style-type: none"><li>• Behavioral, anthropomorphic, and photorealism traits nearly identical to face-to-face communication, specific to each individual participant</li></ul>

		<ul style="list-style-type: none"> <li>• Appropriate response to display environment lighting (subsurface scattering, specular/diffuse maps, light bounce behavior)</li> </ul>
1.6	Cross-platform compatibility	<p>Demonstrated integration with at least 3 of:</p> <ul style="list-style-type: none"> <li>• monitor or television (4k or higher resolution)</li> <li>• tablet or smartphone</li> <li>• head-mounted stereoscopic display</li> <li>• novel display device</li> </ul>
1.7	DH integration	<p>Must develop an installer for each display modality, including any necessary dependencies, such that users are able to conveniently use the communication system without having to purchase licensed software.</p>
System Constraints		
1.8	Commercial integration	<ul style="list-style-type: none"> <li>• Power or charge from US 110 V AC power supply</li> <li>• Compatibility with enterprise operating systems for each display modality (Windows 7 or greater / Mac OS X or greater for PCs, iOS 9 or greater / Android 5.0 or greater for mobile devices, as appropriate for other modalities)</li> </ul>
1.9	System Capture-to-display latency	<ul style="list-style-type: none"> <li>• &lt; 150 ms for transmission of one DH across continental US from coast to coast (each direction, including 'last mile' communications) <ul style="list-style-type: none"> <li>○ 50 ms budget for data transmission</li> <li>○ Applicants should explain the breakdown of the remaining 100 ms (including capture, digitization, server-side operations, reconstruction, and display)</li> </ul> </li> </ul>
1.10	Bandwidth	<ul style="list-style-type: none"> <li>• &lt; 1 Mbps (megabit / sec) for transmission of one fully audiovisually-encoded DH during runtime <ul style="list-style-type: none"> <li>○ high definition spatialized audio budgeted at about 0.5 Mbps</li> </ul> </li> </ul>
1.11	System Cost	<ul style="list-style-type: none"> <li>• Consistent with comparable consumer electronics products costs at scale</li> <li>• Anticipated commercial or specialized component costs should be provided</li> </ul>
1.12	Platform Capabilities	<ul style="list-style-type: none"> <li>• Demonstration of natural communication between 2-5 users, represented as individualized DHs</li> </ul>

It is possible that a neutral, third party or parties may be selected by ARPA-E for testing of Category 1 results. The testing entity would be required to execute standard non-disclosure agreements and the results of the testing would be used solely by ARPA-E and the awardee to evaluate the project. If a third party testing entity is selected, the choice of testing by the third party or through an alternative process will be agreed to between the performer team and ARPA-E.

## Category 2: Complementary digital transportation Technologies

Submissions to Category 2 may reflect numerous complementary advances in component Technologies or new paradigms in digital communication identified as necessary to realize the travel reduction objectives of FACES. Submission to Category 2 must represent dramatic and unequivocal advances to the state of the art. Successful Applicants will provide a detailed description of their proposed Technology, arguments as to why this Technology is necessary and why it will matter if successfully developed, and specific Technical Performance Targets they aim to achieve over the project award period. ARPA-E Technologies must represent substantial improvements over state of the art, and cannot be merely incremental advances.

In addition to proposing specific Technical Performance Targets, Applicants must also address these Technology features:

**Table 2: Category 2 Technical Performance Targets**

Metric	Description	Target
2.1	System Cost	Provide the expected cost at scale of a fully installed system with justification
2.2	Interoperability	Describe how the Technology integrates with other hardware and software components of a digital communications platform
2.3	Energy Reduction	Provide an argument as to why one would expect a reduction in travel as a result of achieving the proposed innovation
2.4	Immersion, Presence, Realism, Naturalness	Describe relevant Technology characteristics that will achieve a higher sense of immersion, presence, realism, and naturalness and an argument as to why the proposed Technology will provide for a better communicative experience and enhanced adoption.

It is possible that a neutral, third party or parties may be selected by ARPA-E for testing of Category 2 results. The testing entity would be required to execute standard non-disclosure agreements and the results of the testing would be used solely by ARPA-E and the awardee to evaluate the project. If a third party testing entity is selected, the choice of testing by the third party or through an alternative process will be agreed to between the performer team and ARPA-E.

### **Category 3: Travel-replacement Thresholds and Technology Evaluation**

In Category 3, multidisciplinary Applicants will be required to assess the efficacy and impact of DH Technologies throughout the life of the Program, to include developing an Evaluation methodology. .

#### **1. Travel-Replacement Thresholds:**

Progress towards travel replacement requires developing a deep understanding of why individuals travel and what telecommunications characteristics are required to meet each of those needs. Based on state-of-the-art technologies, Category 3 Applicants should propose how they will provide actionable feedback to ARPA-E on Technology characteristics necessary to improve likelihood of travel replacement. Category 3 awardees may also assist Category 1 and 2 awardees in testing that demonstrates increase of usability, preference, and adoption over time. A specific methodology must be proposed regarding how the travel-replacement threshold will be studied and defined, both qualitatively and quantitatively.

#### **2. Naturalness assessment of DH communication system:**

Immersion and realism evaluation by Category 3 Awardees will assess the degree to which DH Technologies achieve the travel-replacement threshold by obtaining sustained utilization.

Category 3 Applicants should provide details regarding:

1. Procedures for evaluating DH Technologies, either previously developed or a literature-supported approach to new development of new procedures
2. Acquisition of a statistically significant and diverse participant group
3. Method to correlate qualitative and quantitative realism studies
4. (Optional) Mechanisms to collaborate with Category 1 and Category 2 Awardees on a voluntary basis to achieve rapid Technology iteration based on quantitative information regarding specific Technology and DH characteristics

Examples of subjective Evaluation of DH Technologies might include assessment using the following techniques: Presence Questionnaire; iGroup PW; ITC-Sense of Presence Inventory; MEC-spatial Presence Questionnaire; Temple Presence Inventory; Networked Minds Theory; Psychobiological method of communication; or new methods suggested by Applicants.

Examples of objective Evaluation of DH Technologies might include the assessment of: heart rate; skin temperature; eye-movement; eye-gaze; neural activity; task-based performance; or new methods suggested by Applicants.

**N.B. The above examples are purely illustrative and do not comprise a comprehensive list.**

### **3. Ensure Progress Towards Travel Replacement:**

Real world testing to ensure travel replacement requires:

- Statistically significant longitudinal studies to determine sustained adoption
- Communication between 2 - 5 individuals implemented in a real working environment
- Hardware and infrastructure capable of implementing DH Technologies, such as those developed in Categories 1 and 2
- Facilities for conducting evaluations
- Quantitative measurement of use over time and correlation with travel behavior

## **II. AWARD INFORMATION**

### **A. AWARD OVERVIEW**

ARPA-E expects to make approximately \$9.5 million available for new awards under this FOA, subject to the availability of appropriated funds. ARPA-E anticipates making approximately 2-3 awards in Category 1, 0-5 awards in Category 2, and 1 to 3 awards in Category 3 under this FOA. ARPA-E may, at its discretion, issue one, multiple, or no awards.

Individual awards may vary between \$250,000 and \$9.5 million.

The period of performance for funding agreements may not exceed 36 months. ARPA-E expects the start date for funding agreements to be November 2017, or as negotiated.

ARPA-E encourages submissions stemming from ideas that still require proof-of-concept R&D efforts as well as those for which some proof-of-concept demonstration already exists.

Submissions requiring proof-of-concept R&D can propose a project with the goal of delivering on the program metric at the conclusion of the period of performance. These submissions must contain an appropriate cost and project duration plan that is described in sufficient technical detail to allow reviewers to meaningfully evaluate the proposed project. If awarded, such projects should expect a rigorous go/no-go milestone early in the project associated with the proof-of-concept demonstration. Alternatively, submissions requiring proof-of-concept R&D can propose a project with the project end deliverable being an extremely creative, but partial solution. However, the Applicants are required to provide a convincing vision how these partial solutions can enable the realization of the program metrics with further development.

Applicants proposing projects for which some initial proof-of-concept demonstration already exists must submit concrete data that supports the probability of success of the proposed project.

ARPA-E will provide support at the highest funding level only for submissions with significant technology risk, aggressive timetables, and careful management and mitigation of the associated risks.

ARPA-E will accept only new submissions under this FOA. Applicants may not seek renewal or supplementation of their existing awards through this FOA.

ARPA-E plans to fully fund your negotiated budget at the time of award.

## **B. ARPA-E FUNDING AGREEMENTS**

Through Cooperative Agreements, Technology Investment Agreements, and similar agreements, ARPA-E provides financial and other support to projects that have the potential to realize ARPA-E's statutory mission. ARPA-E does not use such agreements to acquire property or services for the direct benefit or use of the U.S. Government.

Congress directed ARPA-E to "establish and monitor project milestones, initiate research projects quickly, and just as quickly terminate or restructure projects if such milestones are not achieved."<sup>17</sup> Accordingly, ARPA-E has substantial involvement in the direction of every Cooperative Agreement, as described in Section II.C below.

### **1. COOPERATIVE AGREEMENTS**

ARPA-E generally uses Cooperative Agreements to provide financial and other support to Prime Recipients.<sup>18</sup>

Cooperative Agreements involve the provision of financial or other support to accomplish a public purpose of support or stimulation authorized by Federal statute. Under Cooperative Agreements, the Government and Prime Recipients share responsibility for the direction of projects.

ARPA-E encourages Prime Recipients to review the Model Cooperative Agreement, which is available at <http://arpa-e.energy.gov/arpa-e-site-page/award-guidance>.

---

<sup>17</sup> U.S. Congress, Conference Report to accompany the 21<sup>st</sup> Century Competitiveness Act of 2007, H. Rpt. 110-289 at 171-172 (Aug. 1, 2007).

<sup>18</sup> The Prime Recipient is the signatory to the funding agreement with ARPA-E.

## **2. FUNDING AGREEMENTS WITH FFRDCs/DOE LABS, GOGOs, AND FEDERAL INSTRUMENTALITIES**

Any Federally Funded Research and Development Centers (FFRDC) involved as a member of a Project Team must provide the information requested in the “FFRDC Lab Authorization” and “Field Work Proposal” section of the Business Assurances & Disclosures Form, which is submitted with the Applicant’s Full Application.

When a FFRDC/DOE Lab (including the National Energy Technology Laboratory or NETL) is the *lead organization* for a Project Team, ARPA-E executes a funding agreement directly with the FFRDC/DOE Lab and a single, separate Cooperative Agreement with the rest of the Project Team. Notwithstanding the use of multiple agreements, the FFRDC/DOE Lab is the lead organization for the entire project, including all work performed by the FFRDC/DOE Lab and the rest of the Project Team.

When a FFRDC/DOE Lab is a *member* of a Project Team, ARPA-E executes a funding agreement directly with the FFRDC/DOE Lab and a single, separate Cooperative Agreement with the rest of the Project Team. Notwithstanding the use of multiple agreements, the Prime Recipient under the Cooperative Agreement is the lead organization for the entire project, including all work performed by the FFRDC/DOE Lab and the rest of the Project Team.

Funding agreements with DOE/NNSA FFRDCs take the form of Work Authorizations issued to DOE/NNSA FFRDCs through the DOE/NNSA Field Work Proposal system for work performed under Department of Energy Management & Operation Contracts. Funding agreements with non-DOE/NNSA FFRDCs, GOGOs (including NETL), and Federal instrumentalities (e.g., Tennessee Valley Authority) will be consistent with the sponsoring agreement between the U.S. Government and the Laboratory. Any funding agreement with a FFRDC or GOGO will have similar terms and conditions as ARPA-E’s Model Cooperative Agreement (<http://arpa-e.energy.gov/arpa-e-site-page/award-guidance>).

Non-DOE GOGOs and Federal agencies may be proposed to provide support to the project team members on an applicant’s project, through a Cooperative Research and Development Agreement (CRADA) or similar agreement.

## **3. TECHNOLOGY INVESTMENT AGREEMENTS**

ARPA-E may use its “other transactions” authority under the America COMPETES Reauthorization Act of 2010 or DOE’s “other transactions” authority under the Energy Policy Act of 2005 to enter into Technology Investment Agreements (TIAs) with Prime Recipients. ARPA-E may negotiate a TIA when it determines that the use of a standard cooperative agreement, grant, or contract is not feasible or appropriate for a project.

A TIA is more flexible than a traditional financial assistance agreement. In using a TIA, ARPA-E may modify standard Government terms and conditions. See 10 C.F.R. § 603.105 for a description of a TIA.

In general, TIAs require a cost share of 50%. See Section III.B.2 of the FOA.

### **C. STATEMENT OF SUBSTANTIAL INVOLVEMENT**

ARPA-E is substantially involved in the direction of projects from inception to completion. For the purposes of an ARPA-E project, substantial involvement means:

- Project Teams must adhere to ARPA-E's agency-specific and programmatic requirements.
- ARPA-E may intervene at any time in the conduct or performance of work under an award.
- ARPA-E does not limit its involvement to the administrative requirements of an award. Instead, ARPA-E has substantial involvement in the direction and redirection of the technical aspects of the project as a whole.
- During award negotiations, ARPA-E Program Directors and Prime Recipients mutually establish an aggressive schedule of quantitative milestones and deliverables that must be met every quarter. In addition, ARPA-E will negotiate and establish "Go/No-Go" milestones for each project. If the Prime Recipient fails to achieve any of the "Go/No-Go" milestones or technical milestones and deliverables as determined by the ARPA-E Contracting Officer, ARPA-E may – at its discretion - renegotiate the statement of project objectives or schedule of technical milestones and deliverables for the project. In the alternative, ARPA-E may suspend or terminate the award in accordance with 2 C.F.R. §§ 200.338 and 200.339.
- ARPA-E may provide guidance and/or assistance to the Prime Recipient to accelerate the commercial deployment of ARPA-E-funded technologies. Guidance and assistance provided by ARPA-E may include coordination with other Government agencies and nonprofits to provide mentoring and networking opportunities for Prime Recipients. ARPA-E may also organize and sponsor events to educate Prime Recipients about key barriers to the deployment of their ARPA-E-funded technologies. In addition, ARPA-E may establish collaborations with private and public entities to provide continued support for the development and deployment of ARPA-E-funded technologies.

### **III. ELIGIBILITY INFORMATION**

#### **A. ELIGIBLE APPLICANTS**

##### **1. INDIVIDUALS**

U.S. citizens or permanent residents may apply for funding in their individual capacity as a Standalone Applicant,<sup>19</sup> as the lead for a Project Team,<sup>20</sup> or as a member of a Project Team. However, ARPA-E will only award funding to an entity formed by the Applicant.

##### **2. DOMESTIC ENTITIES**

For-profit entities, educational institutions, and nonprofits<sup>21</sup> that are incorporated in the United States, including U.S. territories, are eligible to apply for funding as a Standalone Applicant, as the lead organization for a Project Team, or as a member of a Project Team.

FFRDCs/DOE Labs are eligible to apply for funding as the lead organization for a Project Team or as a member of a Project Team that includes institutions of higher education, companies, research foundations, or trade and industry research collaborations, but not as a Standalone Applicant.

State, local, and tribal government entities are eligible to apply for funding as a member of a Project Team, but not as a Standalone Applicant or as the lead organization for a Project Team.

Federal agencies and instrumentalities (other than DOE) are eligible to apply for funding as a member of a Project Team, but not as a Standalone Applicant or as the lead organization for a Project Team.

##### **3. FOREIGN ENTITIES**

Foreign entities, whether for-profit or otherwise, are eligible to apply for funding as Standalone Applicants, as the lead organization for a Project Team, or as a member of a Project Team. Foreign entities must designate in the Full Application a subsidiary or affiliate incorporated (or otherwise formed or to be formed) under the laws of a State or territory of the United States to

---

<sup>19</sup> A Standalone Applicant is an Applicant that applies for funding on its own, not as part of a Project Team.

<sup>20</sup> The term "Project Team" is used to mean any entity with multiple players working collaboratively and could encompass anything from an existing organization to an ad hoc teaming arrangement. A Project Team consists of the Prime Recipient, Subrecipients, and others performing or otherwise supporting work under an ARPA-E funding agreement.

<sup>21</sup> Nonprofit organizations described in section 501(c)(4) of the Internal Revenue Code of 1986 that engaged in lobbying activities after December 31, 1995 are not eligible to apply for funding as a Prime Recipient or Subrecipient.

receive funding. The Full Application must state the nature of the corporate relationship between the foreign entity and domestic subsidiary or affiliate. The Applicant may request a waiver of this requirement in the Business Assurances & Disclosures Form, which is submitted with the Full Application and can be found at <https://arpa-e-foa.energy.gov/>. Please refer to the Business Assurances & Disclosures Form for guidance on the content and form of the request.

#### **4. CONSORTIUM ENTITIES**

Consortia, which may include domestic and foreign entities, must designate one member of the consortium as the consortium representative to the Project Team. The consortium representative must be incorporated in the United States. The eligibility of the consortium will be determined by reference to the eligibility of the consortium representative under Section III.A of the FOA. Each consortium must have an internal governance structure and a written set of internal rules. Upon request, the consortium entity must provide a written description of its internal governance structure and its internal rules to the Contracting Officer ([ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov)).

Unincorporated consortia must provide the Contracting Officer with a collaboration agreement, commonly referred to as the articles of collaboration, which sets out the rights and responsibilities of each consortium member. This collaboration agreement binds the individual consortium members together and shall include the consortium's:

- Management structure;
- Method of making payments to consortium members;
- Means of ensuring and overseeing members' efforts on the project;
- Provisions for members' cost sharing contributions; and
- Provisions for ownership and rights in intellectual property developed previously or under the agreement.

#### **B. COST SHARING<sup>22</sup>**

Applicants are bound by the cost share proposed in their Full Applications.

##### **1. BASE COST SHARE REQUIREMENT**

ARPA-E generally uses Cooperative Agreements to provide financial and other support to Prime Recipients (see Section II.B.1 of the FOA). Under a Cooperative Agreement or Grant, the Prime

---

<sup>22</sup> Please refer to Section VI.B.3-4 of the FOA for guidance on cost share payments and reporting.

Recipient must provide at least 20% of the Total Project Cost<sup>23</sup> as cost share, except as provided in Sections III.B.2 or III.B.3 below.<sup>24</sup>

## **2. INCREASED COST SHARE REQUIREMENT**

Large businesses are strongly encouraged to provide more than 20% of the Total Project Cost as cost share. ARPA-E may consider the amount of cost share proposed when selecting applications for award negotiations (see Section V.B.1 of the FOA).

Under a Technology Investment Agreement, the Prime Recipient must provide at least 50% of the Total Project Cost as cost share. ARPA-E may reduce this minimum cost share requirement, as appropriate.

## **3. REDUCED COST SHARE REQUIREMENT**

ARPA-E has reduced the minimum cost share requirement for the following types of projects:

- A domestic educational institution or domestic nonprofit applying as a Standalone Applicant is required to provide at least 5% of the Total Project Cost as cost share.
- Small businesses – or consortia of small businesses - will provide 0% cost share from the outset of the project through the first 12 months of the project (hereinafter the “Cost Share Grace Period”).<sup>25</sup> If the project is continued beyond the Cost Share Grace Period, then at least 10% of the Total Project Cost (including the costs incurred during the Cost Share Grace Period) will be required as cost share over the remaining period of performance.
- Project Teams where a small business is the lead organization and small businesses perform greater than or equal to 80%, but less than 100%, of the total work under the funding agreement (as measured by the Total Project Cost) the Project Team are entitled to the same cost share reduction and Cost Share Grace Period as provided above to Standalone small businesses or consortia of small businesses.<sup>26</sup>

---

<sup>23</sup> The Total Project Cost is the sum of the Prime Recipient share and the Federal Government share of total allowable costs. The Federal Government share generally includes costs incurred by GOGOs and FFRDCs.

<sup>24</sup> Energy Policy Act of 2005, Pub.L. 109-58, sec. 988.

<sup>25</sup> Small businesses are generally defined as domestically incorporated entities that meet the criteria established by the U.S. Small Business Administration’s (SBA) “Table of Small Business Size Standards Matched to North American Industry Classification System Codes” (NAICS) (<http://www.sba.gov/content/small-business-size-standards>). Applicants that are small businesses will be required to certify in the Business Assurances & Disclosures Form that their organization meets the SBA’s definition of a small business under at least one NAICS code.

<sup>26</sup> See the information provided in previous footnote.

- Project Teams composed exclusively of domestic educational institutions, domestic nonprofits, and/or FFRDCs are required to provide at least 5% of the Total Project Cost as cost share.
- Project Teams where domestic educational institutions, domestic nonprofits, small businesses, and/or FFRDCs perform greater than or equal to 80%, of the total work under the funding agreement (as measured by the Total Project Cost) are required to provide at least 10% of the Total Project Cost as cost share. However, any entity (such as a large business) receiving patent rights under a class waiver, or other patent waiver, that is part of a Project Team receiving this reduction must continue to meet the statutory minimum cost share requirement (20%) for its portion of the Total Project Cost.
- Projects that do not meet any of the above criteria are subject to the minimum cost share requirements described in Sections III.B.1 and III.B.2 of the FOA.

#### **4. LEGAL RESPONSIBILITY**

Although the cost share requirement applies to the Project Team as a whole, the funding agreement makes the Prime Recipient legally responsible for paying the entire cost share. The Prime Recipient's cost share obligation is expressed in the funding agreement as a static amount in U.S. dollars (cost share amount) and as a percentage of the Total Project Cost (cost share percentage). If the funding agreement is terminated prior to the end of the period of performance, the Prime Recipient is required to contribute at least the cost share percentage of total expenditures incurred through the date of termination.

The Prime Recipient is solely responsible for managing cost share contributions by the Project Team and enforcing cost share obligations assumed by Project Team members in subawards or related agreements.

#### **5. COST SHARE ALLOCATION**

Each Project Team is free to determine how much each Project Team member will contribute towards the cost share requirement. The amount contributed by individual Project Team members may vary, as long as the cost share requirement for the project as a whole is met.

#### **6. COST SHARE TYPES AND ALLOWABILITY**

Every cost share contribution must be allowable under the applicable Federal cost principles, as described in Section IV.G.1 of the FOA.

Project Teams may provide cost share in the form of cash or in-kind contributions. Cash contributions may be provided by the Prime Recipient or Subrecipients. Allowable in-kind contributions include but are not limited to personnel costs, indirect costs, facilities and administrative costs, rental value of buildings or equipment, and the value of a service, other resource, or third party in-kind contribution. Project Teams may use funding or property received from state or local governments to meet the cost share requirement, so long as the funding or property was not provided to the state or local government by the Federal Government.

The Prime Recipient may not use the following sources to meet its cost share obligations:

- Revenues or royalties from the prospective operation of an activity beyond the period of performance;
- Proceeds from the prospective sale of an asset of an activity;
- Federal funding or property (e.g., Federal grants, equipment owned by the Federal Government); or
- Expenditures that were reimbursed under a separate Federal program.

In addition, Project Teams may not use independent research and development (IR&D) funds<sup>27</sup> to meet their cost share obligations under cooperative agreements. However, Project Teams may use IR&D funds to meet their cost share obligations under Technology investment Agreements.

Project Teams may not use the same cash or in-kind contributions to meet cost share requirements for more than one project or program.

Cost share contributions must be specified in the project budget, verifiable from the Prime Recipient's records, and necessary and reasonable for proper and efficient accomplishment of the project. Every cost share contribution must be reviewed and approved in advance by the Contracting Officer and incorporated into the project budget before the expenditures are incurred.

Applicants may wish to refer to 2 C.F.R. Parts 200 and 910, and 10 C.F.R Part 603 for additional guidance on cost sharing, specifically 2 C.F.R. §§ 200.306 and 910.130, and 10 C.F.R. §§ 603.525-555.

---

<sup>27</sup> As defined in Federal Acquisition Regulation Subsection 31.205-18.

## **7. COST SHARE CONTRIBUTIONS BY FFRDCs AND GOGOs**

Because FFRDCs are funded by the Federal Government, costs incurred by FFRDCs generally may not be used to meet the cost share requirement. FFRDCs may contribute cost share only if the contributions are paid directly from the contractor's Management Fee or a non-Federal source.

Because GOGOs/Federal Agencies are funded by the Federal Government, GOGOs/Federal Agencies may not provide cost share for the proposed project. However, the GOGO/Agency costs would be included in Total Project Costs for purposes of calculating the cost-sharing requirements of the applicant.

## **8. COST SHARE VERIFICATION**

Upon selection for award negotiations, Applicants are required to provide information and documentation regarding their cost share contributions. Please refer to Section VI.B.3 of the FOA for guidance on the requisite cost share information and documentation.

### **C. OTHER**

#### **1. COMPLIANT CRITERIA**

Concept Papers are deemed compliant if:

- The Applicant meets the eligibility requirements in Section III.A of the FOA;
- The Concept Paper complies with the content and form requirements in Section IV.C of the FOA; and
- The Applicant entered all required information, successfully uploaded all required documents, and clicked the "Submit" button in ARPA-E eXCHANGE by the deadline stated in the FOA.

Concept Papers found to be noncompliant may not be merit reviewed or considered for award. ARPA-E may not review or consider noncompliant Concept Papers, including Concept Papers submitted through other means, Concept Papers submitted after the applicable deadline, and incomplete Concept Papers. A Concept Paper is incomplete if it does not include required information. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information and documents due to server/connection congestion.

Full Applications are deemed compliant if:

- The Applicant submitted a compliant and responsive Concept Paper;

- The Applicant meets the eligibility requirements in Section III.A of the FOA;
- The Full Application complies with the content and form requirements in Section IV.D of the FOA; and
- The Applicant entered all required information, successfully uploaded all required documents, and clicked the “Submit” button in ARPA-E eXCHANGE by the deadline stated in the FOA.

Full Applications found to be noncompliant may not be merit reviewed or considered for award. ARPA-E may not review or consider noncompliant Full Applications, including Full Applications submitted through other means, Full Applications submitted after the applicable deadline, and incomplete Full Applications. A Full Application is incomplete if it does not include required information and documents, such as Forms SF-424 and SF-424A. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information and documents due to server/connection congestion.

Replies to Reviewer Comments are deemed compliant if:

- The Applicant successfully uploads its response to ARPA-E eXCHANGE by the deadline stated in the FOA; and
- The Replies to Reviewer Comments comply with the content and form requirements of Section IV.E of the FOA.

ARPA-E will not review or consider noncompliant Replies to Reviewer Comments, including Replies submitted through other means and Replies submitted after the applicable deadline. ARPA-E will not extend the submission deadline for Applicants that fail to submit required information due to server/connection congestion. ARPA-E will review and consider each compliant and responsive Full Application, even if no Reply is submitted or if the Reply is found to be noncompliant.

## **2. RESPONSIVENESS CRITERIA**

ARPA-E performs a preliminary technical review of Concept Papers and Full Applications. The following types of submissions may be deemed nonresponsive and may not be reviewed or considered:

- Submissions that fall outside the technical parameters specified in this FOA.
- Submissions that have been submitted in response to other currently issued ARPA-E FOAs.
- Submissions that are not scientifically distinct from applications submitted in response to other currently issued ARPA-E FOAs.

- Submissions for basic research aimed solely at discovery and/or fundamental knowledge generation.
- Submissions for large-scale demonstration projects of existing technologies.
- Submissions for proposed technologies that represent incremental improvements to existing technologies.
- Submissions for proposed technologies that are not based on sound scientific principles (e.g., violates a law of thermodynamics).
- Submissions for proposed technologies that are not transformational, as described in Section I.A of the FOA.
- Submissions for proposed technologies that do not have the potential to become disruptive in nature, as described in Section I.A of the FOA. Technologies must be scalable such that they could be disruptive with sufficient technical progress.
- Submissions that are not scientifically distinct from existing funded activities supported elsewhere, including within the Department of Energy.
- Submissions that describe a technology but do not propose a R&D plan that allows ARPA-E to evaluate the submission under the applicable merit review criteria provided in Section V.A of the FOA.

### **3. SUBMISSIONS SPECIFICALLY NOT OF INTEREST**

Submissions that propose the following will be deemed nonresponsive and will not be merit reviewed or considered:

- Development of display technologies that are not compatible with the display of high-quality, natural DHs.
- Technologies related to physical manipulation in a remote environment.
- Technologies related to providing or employing haptic feedback.
- Technologies related to physical mobility of a telepresence system in a remote space.
- Technologies related to processing unit advances.
- Improvements to internet and networking technologies related to data transmission.
- Collaborative workspaces such as shared documents and other forms of written media
- Incremental development to head mounted displays.
- Motion capture technologies requiring the use of any markers, suits, or other applied, carried, or worn tracking aids.

### **4. LIMITATION ON NUMBER OF SUBMISSIONS**

ARPA-E is not limiting the number of submissions from Applicants. Applicants may submit more than one application to this FOA, provided that each application is scientifically distinct.

## **IV. APPLICATION AND SUBMISSION INFORMATION**

### **A. APPLICATION PROCESS OVERVIEW**

#### **1. REGISTRATION IN ARPA-E eXCHANGE**

The first step in applying to this FOA is registration in ARPA-E eXCHANGE, ARPA-E's online application portal. For detailed guidance on using ARPA-E eXCHANGE, please refer to Section IV.H.1 of the FOA and the "ARPA-E eXCHANGE User Guide" (<https://arpa-e-foa.energy.gov/Manuals.aspx>).

#### **2. CONCEPT PAPERS**

Applicants must submit a Concept Paper by the deadline stated in the FOA. Section IV.C of the FOA provides instructions on submitting a Concept Paper.

ARPA-E performs a preliminary review of Concept Papers to determine whether they are compliant and responsive, as described in Section III.C of the FOA. Concept Papers found to be noncompliant or nonresponsive may not be merit reviewed or considered for award. ARPA-E makes an independent assessment of each compliant and responsive Concept Paper based on the criteria in Section V.A.1 of the FOA.

ARPA-E will encourage a subset of Applicants to submit Full Applications. Other Applicants will be discouraged from submitting a Full Application in order to save them the time and expense of preparing an application submission that is unlikely to be selected for award negotiations. By discouraging the submission of a Full Application, ARPA-E intends to convey its lack of programmatic interest in the proposed project. Such assessments do not necessarily reflect judgments on the merits of the proposed project. Unsuccessful Applicants should continue to submit innovative ideas and concepts to future FOAs.

#### **3. FULL APPLICATIONS**

Applicants must submit a Full Application by the deadline stated in the FOA. Applicants will have approximately 45 days from receipt of the Encourage/Discourage notification to prepare and submit a Full Application. Section IV.D of the FOA provides instructions on submitting a Full Application.

ARPA-E performs a preliminary review of Full Applications to determine whether they are compliant and responsive, as described in Section III.C of the FOA. Full Applications found to be noncompliant or nonresponsive may not be merit reviewed or considered for award. ARPA-E makes an independent assessment of each compliant and responsive Full Application based on the criteria and program policy factors in Sections V.A.2 and V.B.1 of the FOA.

#### **4. REPLY TO REVIEWER COMMENTS**

Once ARPA-E has completed its review of Full Applications, reviewer comments on compliant and responsive Full Applications are made available to Applicants via ARPA-E eXCHANGE. Applicants may submit an optional Reply to Reviewer Comments, which must be submitted by the deadline stated in the FOA. Section IV.E of the FOA provides instructions on submitting a Reply to Reviewer Comments.

ARPA-E performs a preliminary review of Replies to determine whether they are compliant, as described in Section III.C of the FOA. ARPA-E will review and consider compliant Replies only. ARPA-E will review and consider each compliant and responsive Full Application, even if no Reply is submitted or if the Reply is found to be non-compliant.

#### **5. PRE-SELECTION CLARIFICATIONS AND “DOWN-SELECT” PROCESS**

Once ARPA-E completes its review of Full Applications and Replies to Reviewer Comments, it may, at the Contracting Officer’s discretion, conduct a pre-selection clarification process and/or perform a “down-select” of Full Applications. Through the pre-selection clarification process or down-select process, ARPA-E may obtain additional information from select Applicants through pre-selection meetings, webinars, videoconferences, conference calls, written correspondence, or site visits that can be used to make a final selection determination. ARPA-E will not reimburse Applicants for travel and other expenses relating to pre-selection meetings or site visits, nor will these costs be eligible for reimbursement as pre-award costs.

ARPA-E may select applications for award negotiations and make awards without pre-selection meetings and site visits. Participation in a pre-selection meeting or site visit with ARPA-E does not signify that Applicants have been selected for award negotiations.

#### **6. SELECTION FOR AWARD NEGOTIATIONS**

ARPA-E carefully considers all of the information obtained through the application process and makes an independent assessment of each compliant and responsive Full Application based on the criteria and program policy factors in Sections V.A.2 and V.B.1 of the FOA. The Selection Official may select all or part of a Full Application for award negotiations. The Selection Official may also postpone a final selection determination on one or more Full Applications until a later date, subject to availability of funds and other factors. ARPA-E will enter into award negotiations only with selected Applicants.

Applicants are promptly notified of ARPA-E’s selection determination. ARPA-E may stagger its selection determinations. As a result, some Applicants may receive their notification letter in advance of other Applicants. Please refer to Section VI.A of the FOA for guidance on award notifications.

## 7. MANDATORY WEBINAR

All selected Applicants, including the Principal Investigator and the financial manager for the project, are required to participate in a webinar that is held within approximately one week of the selection notification. During the webinar, ARPA-E officials present important information on the award negotiation process, including deadlines for the completion of certain actions.

### B. APPLICATION FORMS

Required forms for Full Applications are available on ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov>), including the SF-424 and Budget Justification Workbook/SF-424A. A sample Summary Slide is available on ARPA-E eXCHANGE. Applicants may use the templates available on ARPA-E eXCHANGE, including the template for the Concept Paper, the template for the Technical Volume of the Full Application, the template for the Summary Slide, the template for the Summary for Public Release, the template for the Reply to Reviewer Comments, and the template for the Business Assurances & Disclosures Form. A sample response to the Business Assurances & Disclosures Form is available on ARPA-E eXCHANGE.

### C. CONTENT AND FORM OF CONCEPT PAPERS

**The Concept Paper is mandatory** (i.e. in order to submit a Full Application, a compliant and responsive Concept Paper must have been submitted) and must conform to the following formatting requirements:

- The Concept Paper must not exceed 4 pages in length including graphics, figures, and/or tables.
- The Concept Paper must be submitted in Adobe PDF format.
- The Concept Paper must be written in English.
- All pages must be formatted to fit on 8-1/2 by 11 inch paper with margins not less than one inch on every side. Single space all text and use Times New Roman typeface, a black font color, and a font size of 12 point or larger (except in figures and tables).
- The ARPA-E assigned Control Number, the Lead Organization Name, and the Principal Investigator's Last Name must be prominently displayed on the upper right corner of the header of every page. Page numbers must be included in the footer of every page.

- The first paragraph must include the Lead Organization's Name and Location, Principal Investigator's Name, Technical Category, Proposed Funding Requested (Federal and Cost Share), and Project Duration.

Concept Papers found to be noncompliant or nonresponsive may not be merit reviewed or considered for award (see Section III.C of the FOA).

Each Concept Paper must be limited to a single concept or technology. Unrelated concepts and technologies must not be consolidated into a single Concept Paper.

A fillable Concept Paper template is available on ARPA-E eXCHANGE at <https://arpa-e-foa.energy.gov>.

Concept Papers must conform to the content requirements described below. If Applicants exceed the maximum page length indicated above, ARPA-E will review only the authorized number of pages and disregard any additional pages.

## **1. CONCEPT PAPER**

### **a. CONCEPT SUMMARY**

- Describe the proposed concept with minimal jargon, and explain how it addresses the Program Objectives of the FOA.

### **b. INNOVATION AND IMPACT**

- Clearly identify the problem to be solved with the proposed technology concept.
- Describe how the proposed effort represents an innovative and potentially transformational solution to the technical challenges posed by the FOA.
- Explain the concept's potential to be disruptive compared to existing or emerging technologies.
- To the extent possible, provide quantitative metrics in a table that compares the proposed technology concept to current and emerging technologies and to the Technical Performance Targets in Section I.F of the FOA for the appropriate Technology Category in Section I.E of the FOA.

### **c. PROPOSED WORK**

- Describe the final deliverable(s) for the project and the overall technical approach used to achieve project objectives.
- Discuss alternative approaches considered, if any, and why the proposed approach is most appropriate for the project objectives.
- Describe the background, theory, simulation, modeling, experimental data, or other sound engineering and scientific practices or principles that support the proposed approach. Provide specific examples of supporting data and/or appropriate citations to the scientific and technical literature.
- Describe why the proposed effort is a significant technical challenge and the key technical risks to the project. Does the approach require one or more entirely new technical developments to succeed? How will technical risk be mitigated?
- Identify techno-economic challenges to be overcome for the proposed technology to be commercially relevant.
- Estimated federal funds requested; total project cost including cost sharing. Include breakdown of labor, travel, and other direct charges (hardware, software, etc.).

### **d. TEAM ORGANIZATION AND CAPABILITIES**

- Indicate the roles and responsibilities of the organizations and key personnel that comprise the Project Team.
- Provide the name, position, and institution of each key team member and describe in 1-2 sentences the skills and experience that he/she brings to the team.
- Identify key capabilities provided by the organizations comprising the Project Team and how those key capabilities will be used in the proposed effort.
- Identify (if applicable) previous collaborative efforts among team members relevant to the proposed effort.

## **D. CONTENT AND FORM OF FULL APPLICATIONS**

Full Applications must conform to the following formatting requirements:

- Each document must be submitted in the file format prescribed below.

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- The Full Application must be written in English.
- All pages must be formatted to fit on 8-1/2 by 11 inch paper with margins not less than one inch on every side. Single space all text and use Times New Roman typeface, a black font color, and a font size of 12 point or larger (except in figures and tables).
- The ARPA-E assigned Control Number, the Lead Organization Name, and the Principal Investigator's Last Name must be prominently displayed on the upper right corner of the header of every page. Page numbers must be included in the footer of every page.

Full Applications found to be noncompliant or nonresponsive may not be merit reviewed or considered for award (see Section III.C of the FOA).

Each Full Application should be limited to a single concept or technology. Unrelated concepts and technologies should not be consolidated in a single Full Application.

Fillable Full Application template documents are available on ARPA-E eXCHANGE at <https://arpa-e-foa.energy.gov>.

Full Applications must conform to the content requirements described below.

Component	Required Format	Description and Information
<b>Technical Volume</b>	PDF	The centerpiece of the Full Application. Provides a detailed description of the proposed R&D project and Project Team. A Technical Volume template is available on ARPA-E eXCHANGE ( <a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a> ).
<b>SF-424</b>	PDF	Application for Federal Assistance ( <a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a> ). Applicants are responsible for ensuring that the proposed costs listed in eXCHANGE match those listed on forms SF-424 and SF-424A. Inconsistent submissions may impact ARPA-E's final award determination.
<b>Budget Justification Workbook/SF-424A</b>	XLS	Budget Information – Non-Construction Programs ( <a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a> )
<b>Summary for Public Release</b>	PDF	Short summary of the proposed R&D project. Intended for public release. A Summary for Public Release template is available on ARPA-E eXCHANGE ( <a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a> ).
<b>Summary Slide</b>	PPT	A four-panel project slide summarizing different aspects of the proposed R&D project. A Summary Slide template is available on ARPA-E eXCHANGE ( <a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a> ).

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

<b>Business Assurances &amp; Disclosures Form</b>	PDF	Requires the Applicant to make responsibility disclosures and disclose potential conflicts of interest within the Project Team. Requires the Applicant to describe the additionality and risks associated with the proposed project, disclose applications for funding currently pending with Federal and non-Federal entities, and disclose funding from Federal and non-Federal entities for work in the same technology area as the proposed R&D project. If the Applicant is a FFRDC/DOE Lab, requires the Applicant to provide written authorization from the cognizant Federal agency and, if a DOE/NNSA FFRDC/DOE Lab, a Field Work Proposal. Allows the Applicant to request a waiver or modification of the Performance of Work in the United States requirement and/or the Technology Transfer & Outreach (TT&O) spending requirement. This form is available on ARPA-E eXCHANGE at <a href="https://arpa-e-foa.energy.gov">https://arpa-e-foa.energy.gov</a> . A sample response to the Business Assurances & Disclosures Form is also available on ARPA-E eXCHANGE.
<b>U.S. Manufacturing Plan</b>	PDF	As part of the application, Applicants are required to submit a U.S. Manufacturing Plan. The U.S. Manufacturing Plan represents the Applicant's measurable commitment to support U.S. manufacturing as a result of its award. See detailed U.S. Manufacturing Plan instructions and examples in the Seventh Component description below.

ARPA-E provides detailed guidance on the content and form of each component below.

## 1. FIRST COMPONENT: TECHNICAL VOLUME

The Technical Volume must be submitted in Adobe PDF format. A Technical Volume template is available at <https://arpa-e-foa.energy.gov>. The Technical Volume must conform to the following content and form requirements, including maximum page lengths specified below. If Applicants exceed the maximum page lengths specified for each section indicated below, ARPA-E will review only the authorized number of pages and disregard any additional pages.

Applicants must provide sufficient citations and references to the primary research literature to justify the claims and approaches made in the Technical Volume. ARPA-E and reviewers may review primary research literature in order to evaluate applications. However, ARPA-E and reviewers are under no obligation to review cited sources (e.g., Internet websites).

<b><u>PAGE LIMIT</u></b>	<b><u>SECTION</u></b>	<b><u>DESCRIPTION</u></b>
<b>1 page max.</b>	<b>EXECUTIVE SUMMARY</b>	<p>Summarize the objective(s) and technical approach of the proposed effort at a technical level appropriate for scientific and engineering peers.</p> <p><b>INSTRUCTIONS:</b></p> <ol style="list-style-type: none"> <li>(1) The Project Title should be brief and descriptive of the proposed technology.</li> <li>(2) Identify the most relevant Technical Category for the proposed technology from the “Technical Categories of Interest” in Section I.E of the FOA. Select only one Technical Category unless the FOA specifically allows applications to name multiple categories.</li> <li>(3) Enter the estimated Total Project Cost in U.S. dollars and percentage cost share in parentheses.</li> <li>(4) Enter the Project Duration in months.</li> <li>(5) The Executive Summary shall not exceed 1 page in length</li> <li>(6) The Executive Summary may contain graphics, figures, or tables as needed to summarize the technical concept.</li> </ol>
<b>Sections 1-5 30 pages max.</b>	<b>Section 1 INNOVATION AND IMPACT</b>	<p>Describe how the proposed work offers an innovative approach to achieve the program objectives of the FOA and how it will impact the mission areas of ARPA-E.</p> <p><b>1.1 Overall Description.</b></p> <ul style="list-style-type: none"> <li>• Describe the conceptual basis for the project and how the proposed technology works with minimal jargon.</li> <li>• Explain the objective(s) and performance characteristics of the proposed effort.</li> </ul> <p><b>1.2 Potential Impact.</b></p> <ul style="list-style-type: none"> <li>• Clearly identify the problem that is being solved with the proposed technology.</li> <li>• Describe how the proposed effort addresses one (or more) of the “Technical Categories of Interest” from Section I.E of the FOA.</li> <li>• Explain the project’s potential to be disruptive relative to the existing technology or how the project establishes a basis for new innovations.</li> </ul> <p><b>1.3 Innovativeness.</b></p> <ul style="list-style-type: none"> <li>• Describe how the proposed effort represents a new and innovative solution to the overall program challenge described in the FOA.</li> <li>• Indicate the technical goals and anticipated results, using appropriate metrics, for the project. Provide a description of how the metrics were derived, citing key previous results and/or assumptions.</li> <li>• Include and discuss, as appropriate, a table in which the targeted performance of the proposed technology is compared with the “Technical Performance Targets” in Section I.F of the FOA and with</li> </ul>

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

		<p>other competing or emerging technologies that might achieve the FOA Technical Performance Targets.</p> <p><b>INSTRUCTIONS:</b></p> <p>(1) The Innovation and Impact Section may include figures, tables, and graphics.</p> <p>(2) The suggested length of the Innovation and Impact Section is 4 pages.</p>
	<p><b>Section 2 PROPOSED WORK</b></p>	<p>Describe and discuss for the proposed effort the technical background and approach, the R&amp;D tasks, and the key technical risks. This Section must justify the proposed approach as being appropriate to achieve the project's objective(s).</p> <p><b>2.1 Approach.</b></p> <ul style="list-style-type: none"> <li>Describe the technical approach and how this approach will achieve the proposed project objective(s).</li> <li>Discuss alternative approaches considered, if any, and why the selected approach is most appropriate for the identified objective(s).</li> <li>Describe the background, theory, simulation, modeling, experimental data, or other sound engineering and scientific practices or principles that support achieving the project objective(s). Provide specific examples of supporting data and/or appropriate citations to the scientific and technical literature.</li> </ul> <p><b>2.2 Technical Risk.</b></p> <ul style="list-style-type: none"> <li>Identify potential technical issues and risks, e.g., the approach requires a never-before-demonstrated fabrication technique or greater-than-previously-demonstrated sub-component performance, etc.</li> <li>Describe appropriate mitigation techniques and plans, if any, for each identified issue and risk.</li> </ul> <p><b>2.3 Schedule.</b></p> <ul style="list-style-type: none"> <li>Provide a schedule for the proposed effort by major tasks, including major milestones or Go/No-Go decision points as appropriate. (<b><u>A Gantt chart is recommended.</u></b>)</li> </ul> <p><b>2.4 Task Descriptions.</b></p> <ul style="list-style-type: none"> <li>Identify and provide a full technical description for each main task in the proposed effort.</li> <li>Discuss the reason the identified tasks are appropriate and sufficient for the identified approach.</li> <li>Describe the key technical milestones and how these define the critical path for successful completion of the task.</li> <li>Indicate how completion of each task relates to reducing technological uncertainty and achieving the overall project objective(s).</li> </ul> <p><b>INSTRUCTIONS:</b></p> <p>(1) The Proposed Work Section may include figures, tables, and graphics.</p>

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

		(2) The suggested length of the Proposed Work Section is 12 pages.
	<b>Section 3 TEAM ORGANIZATION AND CAPABILITIES</b>	<p>Describe and discuss the, organization, capabilities, and management of the team and how these enable successful execution of the proposed effort.</p> <p><b>3.1 Organization.</b></p> <ul style="list-style-type: none"> <li>• Indicate roles and responsibilities of the organizations on the proposed Project Team, e.g., subrecipient, consultant, subcontractor, or lead organization for each of the project tasks. Include relevant organization charts and teaming organization charts, as applicable.</li> <li>• Identify Key Personnel, describe how their qualifications relate to the proposed effort, and indicate their roles and responsibilities for each of the project tasks.</li> <li>• Identify previous collaborative efforts among team members if relevant to the proposed effort.</li> </ul> <p><b>3.2 Capabilities, Facilities, Equipment, and Information.</b></p> <ul style="list-style-type: none"> <li>• Identify capabilities of the Applicant or proposed Project Team, e.g., relevant experience, previous or current R&amp;D efforts, or related government or commercial projects, that support the proposed effort.</li> <li>• Identify all required facilities, equipment, and information for the proposed effort and discuss their adequacy and availability.</li> <li>• Indicate any key equipment that must be fabricated or purchased.</li> </ul> <p><b>INSTRUCTIONS:</b></p> <p>(1) This Section may include figures, tables, and graphics.  (2) The suggested length of the Team Section is 4 pages.</p>
	<b>Section 4 TECHNOLOGY TO MARKET</b>	<p>The significant impact sought by ARPA-E depends upon successful projects finding a path to large-scale adoption. ARPA-E projects are not required to achieve commercial deployment by the end of the period of performance, but the agency asks the Applicant to define a reasonable path for the proposed technology toward commercial adoption.</p> <p><b>4.1 Technology to Market Strategy.</b></p> <ul style="list-style-type: none"> <li>• Describe how the proposed technology is expected to transition from the lab to commercial deployment, including a description of the eventual product, potential near- and long-term market entries, likely commercialization approach (startup, license, etc.), specific organizations expected to be involved in the transition (partners, customers, etc.), and the commercialization timeline.</li> <li>• Discuss manufacturing, cost, and scalability risks associated with the technology.</li> <li>• Describe anticipated resource needs for the next phase of development following the end of the ARPA-E project.</li> <li>• Explain why the proposed research is not being pursued by industry today.</li> <li>• Discuss the anticipated roles for the proposed research team in the commercialization of the technology.</li> </ul>

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

		<p><b>4.2 Intellectual Property.</b></p> <ul style="list-style-type: none"> <li>Describe existing intellectual property, if any, that will be used to develop the new intellectual property; and</li> <li>Discuss new intellectual property and data that is anticipated to be created as part of this effort, if any.</li> </ul> <p><b>INSTRUCTIONS:</b></p> <p>(1) The Technology to Market Section may include figures, tables, and graphics.</p> <p>(2) The suggested length of the Technology to Market Section is 4 pages.</p>																																										
	<p><b>Section 5 BUDGET</b></p>	<p>Indicate the budget, in US dollars, and provide a high-level budget summary, demonstrating that the budget is reasonable and appropriate for the proposed effort.</p> <p><b>5.1 Budget Breakdown.</b></p> <p>Provide in tabular form following the template give below, a breakdown of the project budget by entity and major task in US dollars.</p> <table border="1"> <thead> <tr> <th>Task Name</th> <th>[Prime]</th> <th>[Sub #1]</th> <th>[Sub #2]</th> <th>[Sub #3]</th> <th>[Sub #4]</th> <th>Total</th> </tr> </thead> <tbody> <tr> <td>[Task #1]</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>[Task #2]</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>[Task #3]</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Technol ogy-to- Market</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td><b>Total</b></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table> <p>Replace “Prime” with name of the primary (lead) entity and “Sub #n” with the name of the sub-recipient or sub-contractor entities, if applicable. Task names should clearly correspond to major tasks listed in Section 2.4. Expand or contract the table as needed to add/subtract entities (columns) or tasks (rows).</p> <p><b>5.2 Budget Summary.</b></p> <p>Provide a high-level summary for the project by major budget category, including at least these three:</p> <ul style="list-style-type: none"> <li>Key Personnel and technical staff to be utilized (e.g., scientists, engineers, technicians, postdocs, graduate students, etc.)</li> <li>Equipment</li> <li>Materials and Supplies</li> </ul> <p><b>5.3 Cost Share.</b></p>	Task Name	[Prime]	[Sub #1]	[Sub #2]	[Sub #3]	[Sub #4]	Total	[Task #1]							[Task #2]							[Task #3]							Technol ogy-to- Market							<b>Total</b>						
Task Name	[Prime]	[Sub #1]	[Sub #2]	[Sub #3]	[Sub #4]	Total																																						
[Task #1]																																												
[Task #2]																																												
[Task #3]																																												
Technol ogy-to- Market																																												
<b>Total</b>																																												

		<p>Provide a description of the cost share by value of the contribution (in dollars) and percentage of the Total Project Cost (TPC):</p> <ul style="list-style-type: none"> <li>List each source of cost share, the type of contribution (cash or in-kind), the value of the contribution (in dollars), and the value as a percentage of TPC.</li> <li>For all in-kind contributions, provide a detailed description of the contribution and its relevance to the project objectives</li> </ul> <p><b>INSTRUCTIONS:</b></p> <p>(1) The Budget Section may include figures, tables, and graphics.  (2) The suggested length of the Budget Section is 4 pages.</p>
<b>No page limit</b>	<b>REFERENCES</b>	<p>Provide a list of references appropriate to Sections 1-5.</p> <p><b>INSTRUCTIONS:</b></p> <p>(1) Only bibliographic information may be contained in the references. No additional text or commentary is allowed.  (2) There is no page limit for the Bibliographic References Section, which is outside of the overall 30-page limit for Sections 1-5.</p>
<b>Each PQS limited to 3 pages in length, no cumulative page limit</b>	<b>PERSONAL QUALIFICATION SUMMARIES</b>	<p>A Personal Qualification Summary (PQS) is required for the PI and all other Key Personnel. Each PQS must include a description of the following only:</p> <ul style="list-style-type: none"> <li>Education and training</li> <li>Employment history</li> <li>Awards and honors</li> <li>A list of no more than 10 peer-reviewed publications related to the proposed project</li> <li>A list of no more than 10 other peer-reviewed publications demonstrating capabilities in the broad field</li> <li>A list of no more than 10 non-peer-reviewed publications and patents demonstrating capabilities in the broad field</li> </ul> <p><b>INSTRUCTIONS:</b></p> <p>(1) Each Personal Qualification Summary is limited to 3 pages in length and there is no page limit for this Section, which is outside of the 30-page limit for Sections 1-5.  (2) Curriculum Vitae should not be submitted.</p>

## 2. SECOND COMPONENT: SF-424

The SF-424 must be submitted in Adobe PDF format. This form is available on ARPA-E eXCHANGE at <https://arpa-e-foa.energy.gov>.

The SF-424 includes instructions for completing the form. Applicants are required to complete all required fields in accordance with the instructions.

Prime Recipients and Subrecipients are required to complete SF-LLL (Disclosure of Lobbying Activities), available at <http://www.whitehouse.gov/sites/default/files/omb/grants/sflllin.pdf>, if any non-Federal funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with your application or funding agreement. The completed SF-LLL must be appended to the SF-424.

ARPA-E provides the following supplemental guidance on completing the SF-424:

- Each Project Team should submit only one SF-424 (i.e., a Subrecipient should not submit a separate SF-424).
- Assume a project start date of November 2017, or as negotiated.
- The list of certifications and assurances in Block 21 can be found at <http://energy.gov/management/downloads/certifications-and-assurances-use-sf-424>.
- The dates and dollar amounts on the SF-424 are for the entire period of performance (from the project start date to the project end date), not a portion thereof.
- Applicants are responsible for ensuring that the proposed costs listed in eXCHANGE match those listed on forms SF-424 and SF-424A. Inconsistent submissions may impact ARPA-E's final award determination.

### 3. THIRD COMPONENT: BUDGET JUSTIFICATION WORKBOOK/SF-424A

Applicants are required to complete the Budget Justification Workbook/SF-424A Excel spreadsheet. This form is available on ARPA-E eXCHANGE at <https://arpa-e-foa.energy.gov>. Prime Recipients must complete each tab of the Budget Justification Workbook for the project as a whole, including all work to be performed by the Prime Recipient and its Subrecipients and Contractors. The SF-424A form included with the Budget Justification Workbook will “auto-populate” as the Applicant enters information into the Workbook. Applicants should carefully read the “Instructions and Summary” tab provided within the Budget Justification Workbook.

Subrecipient information must be submitted as follows:

- Each Subrecipient incurring greater than or equal to 10% of the Total Project Cost must complete a separate Budget Justification workbook to justify its proposed budget. These worksheets must be inserted as additional sheets within in the Prime Recipient’s Budget Justification.
- Subrecipients incurring less than 10% of the Total Project Cost are not required to complete a separate Budget Justification workbook. However, such Subrecipients are required to provide supporting documentation to justify their proposed budgets. At a minimum, the supporting documentation must show which tasks/subtasks are being performed, the purpose/need for the effort, and a sufficient basis for the estimated costs.

ARPA-E provides the following supplemental guidance on completing the Budget Justification Workbook/SF-424A:

- Applicants may request funds under the appropriate object class category tabs as long as the item and amount requested are necessary to perform the proposed work, meet all the criteria for allowability under the applicable Federal cost principles, and are not prohibited by the funding restrictions described herein.
- If Patent costs are requested, they must be included in the Applicant’s proposed budget (see Section IV.G.3 of the FOA for more information on Patent Costs).
- Unless a waiver is granted by ARPA-E, each Project Team must spend at least 5% of the Federal funding (i.e., the portion of the award that does not include the recipient’s cost share) on Technology Transfer & Outreach (TT&O) activities to promote and further the development and deployment of ARPA-E-funded technologies.
- All TT&O costs requested must be included in the Applicant’s proposed budget and identified as TT&O costs in the Budget Justification Workbook/SF-424A with the costs being requested under the “Other” budget category. All budgeted activities must relate

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

to achieving specific objectives, technical milestones and deliverables outlined in Section 2.4 Task Descriptions of the Technical Volume.

- For pricing purposes, assume a project start date of November 2017, or as negotiated.
- For more information, please refer to the ARPA-E Budget Justification Guidance document at <https://arpa-e-foa.energy.gov>.

#### 4. FOURTH COMPONENT: SUMMARY FOR PUBLIC RELEASE

Applicants are required to provide a 250 word maximum Summary for Public Release. A Summary for Public Release template is available on ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov>). The Summary for Public Release must be submitted in Adobe PDF format. This summary should not include any confidential, proprietary, or privileged information. The summary should be written for a lay audience (e.g., general public, media, Congress) using plain English.

<b>250 Words</b>	<b>SUMMARY FOR PUBLIC RELEASE</b>	<p>Briefly describe the proposed effort, summarize its objective(s) and technical approach, describe its ability to achieve the “Program Objectives” (see Section I.D of the FOA), and indicate its potential impact on “ARPA-E Mission Areas” (see Section I.A of the FOA). The summary should be written at technical level suitable for a high-school science student and is designed for public release.</p> <p><b>INSTRUCTIONS:</b></p> <p>(1) The Summary for Public Release <u>shall not exceed 250 words and one paragraph</u>.</p> <p>(2) The Summary for Public Release <u>shall consist only of text</u>—no graphics, figures, or tables.</p> <p>(3) For applications selected for award negotiations, the Summary may be used as the basis for a public announcement by ARPA-E; therefore, <b><u>this Cover Page and Summary should not contain confidential or proprietary information</u></b>. See Section VIII.E of the FOA for additional information on marking confidential information</p>
------------------	-----------------------------------	---

#### 5. FIFTH COMPONENT: SUMMARY SLIDE

Applicants are required to provide a single PowerPoint slide summarizing the proposed project. The slide must be submitted in Microsoft PowerPoint format. This slide will be used during ARPA-E’s evaluation of Full Applications. A summary slide template and a sample summary slide are available on ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov>). Summary Slides must conform to the content requirements described below:

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- A Technology Summary;
  - Bullet points that describe novel aspects of the proposed technology and technology approach;
- A description of the technology's impact;
  - Quantitative description (through text or graphic) of the impact the proposed project will provide to the market and ARPA-E mission areas;
- Proposed Targets;
  - Including any important technical performance metrics and/or impact categories;
  - Including quantitative description of the state of the art;
  - Including quantitative descriptions of the proposed targets;
- Any key graphics (illustrations, charts and/or tables) summarizing technology development and/or impact;
- The project's key idea/takeaway;
- Project title and Principal Investigator information; and
- Requested ARPA-E funds and proposed Applicant cost share.

## **6. SIXTH COMPONENT: BUSINESS ASSURANCES & DISCLOSURES FORM**

Applicants are required to provide the information requested in the Business Assurances & Disclosures Form. The information must be submitted in Adobe PDF format. A fillable Business Assurances & Disclosures Form template is available on ARPA-E eXCHANGE at <https://arpa-e-foa.energy.gov>. A sample response to the Business Assurances & Disclosures Form is also available on ARPA-E eXCHANGE.

As described in the Business Assurances & Disclosures Form, the Applicant is required to:

- Disclose conditions bearing on responsibility, such as criminal convictions and Federal tax liability;
- Disclose potential conflicts of interest within the Project Team;
- If the Applicant is a FFRDC/DOE Lab, submit written authorization from the cognizant Federal agency; and
- If the Applicant is a DOE/NNSA FFRDC/DOE Lab, submit a Field Work Proposal.

In addition, ARPA-E is required by statute to “accelerat[e] transformational technological advances in areas that industry is by itself not likely to undertake because of technical and financial uncertainty.”<sup>28</sup> In accordance with ARPA-E’s statutory mandate, the Applicant is required to:

---

<sup>28</sup> America COMPETES Act, Pub. L. No. 110-69, § 5012 (2007), as amended (codified at 42 U.S.C. § 16538).

- Describe the additionality and risks associated with the proposed R&D project;
- Disclose any applications for the same project or related work currently pending with any Federal or non-Federal entities; and
- Disclose all funding for work in the same technology area as the proposed project received from any Federal or non-Federal entity within the last 5 years.

Finally, the Applicant may use the Business Assurances & Disclosures Form to:

- Request authorization to perform some work overseas; and
- Request a waiver of the TT&O spending requirement.

## 7. SEVENTH COMPONENT: U.S. MANUFACTURING PLAN

As part of the application, Applicants are required to submit a U.S. Manufacturing Plan that should not exceed one page in length. The U.S. Manufacturing Plan represents the Applicant's measurable commitment to support U.S. manufacturing as a result of its award. U.S. Manufacturing Plans are a Program Policy Factor during the review and selection process. See Section V.B.1 of the FOA.

A U.S. Manufacturing Plan should contain the following or similar preamble: "If selected for funding, the Applicant agrees to the following commitments as a condition of that funding:" and, after the preamble, the plan should include one or more specific and measureable commitments. For example, an Applicant may commit particular types of products to be manufactured in the U.S. **These plans should not include requirements regarding the source of inputs<sup>29</sup> used during the manufacturing process.** In addition to or instead of making a commitment tied to a particular product, the Applicant may make other types of commitments still beneficial to U.S. manufacturing. An Applicant may commit to a particular investment in a new or existing U.S. manufacturing facility, keep certain activities based in the U.S. (i.e., final assembly) or support a certain number of jobs in the U.S. related to the technology and manufacturing. For an Applicant which is likely to license the technology to others, especially universities for which licensing may be the exclusive means of commercialization the technology, the U.S. manufacturing plan may indicate the Applicant's plan and commitment to use a licensing strategy **for both exclusive and nonexclusive licensing** that would likely support U.S. manufacturing.

---

<sup>29</sup> For purposes of this FOA, an input refers to something which is used during the manufacturing process which (1) was in existence prior to or first produced outside of an ARPA-E award; (2) does not embody a subject invention, or technology which is developed or improved under an ARPA-E award; and (3) was not produced through the use of a subject invention, or technology which is developed or improved under an ARPA-E award.

When an Applicant that is a domestic small business, domestic educational institution, or nonprofit organization is selected for an award, the U.S. Manufacturing Plan submitted by the Applicant may become part of the terms and conditions of the award **in addition to the requirements attaching to subject inventions described in VI.B.8 below**. See Section IV.B.8 of the FOA for U.S. Manufacturing Requirements applicable to large businesses. The Applicant/Awardee may request a waiver or modification of the U.S. Manufacturing Plan from DOE upon a showing that the original U.S. Manufacturing Plan is no longer economically feasible.

Class patent waivers usually apply to domestic large businesses as set forth in Section VIII.F of the FOA. Under this class patent waiver, domestic large businesses may elect title to their subject inventions similar to the right provided to the domestic small businesses, educational institutions, and nonprofits by law. In order to avail itself of the class patent waiver, a domestic large business must agree that any products embodying or produced through the use of an invention conceived or first actually reduced to practice under the award will be substantially manufactured in the United States, unless DOE agrees that the commitments proposed in the U.S. Manufacturing Plan are sufficient. The U.S. Manufacturing Plan submitted by the Applicant may become part of the terms and conditions of the award **in addition to the requirements attaching to subject inventions**.

## **E. CONTENT AND FORM OF REPLIES TO REVIEWER COMMENTS**

~~[TO BE INSERTED BY FOA MODIFICATION IN MARCH 2017]~~

Written feedback on Full Applications is made available to Applicants before the submission deadline for Replies to Reviewer Comments. Applicants have a brief opportunity to prepare a short Reply to Reviewer Comments responding to one or more comments or supplementing their Full Application. A fillable Reply to Reviewer Comments template is available on ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov>).

Replies to Reviewer Comments must conform to the following requirements:

- The Reply to Reviewer Comments must be submitted in Adobe PDF format.
- The Reply to Reviewer Comments must be written in English.
- 1. All pages must be formatted to fit on 8-1/2 by 11 inch paper with margins not less than one inch on every side. Use Times New Roman typeface, a black font color, and a font size of 12 points or larger (except in figures and tables).

- The Control Number must be prominently displayed on the upper right corner of the header of every page. Page numbers must be included in the footer of every page.

ARPA-E may not review or consider noncompliant Replies to Reviewer Comments (see Section III.C.1 of the FOA). ARPA-E will review and consider each compliant and responsive Full Application, even if no Reply is submitted or if the Reply is found to be noncompliant.

Replies to Reviewer Comments must conform to the following content and form requirements, including maximum page lengths, described below. If a Reply to Reviewer Comments is more than three pages in length, ARPA-E will review only the first three pages and disregard any additional pages.

SECTION	PAGE LIMIT	DESCRIPTION
Text	2 pages maximum	<ul style="list-style-type: none"><li>• Applicants may respond to one or more reviewer comments or supplement their Full Application.</li></ul>
Images	1 page maximum	<ul style="list-style-type: none"><li>• Applicants may provide graphs, charts, or other data to respond to reviewer comments or supplement their Full Application.</li></ul>

## **F. INTERGOVERNMENTAL REVIEW**

This program is not subject to Executive Order 12372 (Intergovernmental Review of Federal Programs).

## **G. FUNDING RESTRICTIONS**

### **1. ALLOWABLE COSTS**

All expenditures must be allowable, allocable, and reasonable in accordance with the applicable Federal cost principles. ARPA-E has listed the Federal cost principles for different categories of Applicants at <http://arpa-e.energy.gov/arpa-e-site-page/post-award-guidance>.

### **2. PRE-AWARD COSTS**

ARPA-E will not reimburse any pre-award costs incurred by Applicants before they are selected for award negotiations. Please refer to Section VI.A of the FOA for guidance on award notices.

Upon selection for award negotiations, Applicants may incur pre-award costs at their own risk, consistent with the requirements in 2 C.F.R. Part 200, as modified by 2 C.F.R. Part 910, and other Federal laws and regulations. ARPA-E generally does not accept budgets as submitted with the Full Application. Budgets are typically reworked during award negotiations. ARPA-E is

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

under no obligation to reimburse pre-award costs if, for any reason, the Applicant does not receive an award or the award is made for a lesser amount than the Applicant expected, or if the costs incurred are not allowable, allocable, or reasonable.

Pre-award costs expected to exceed \$100,000 or incurred more than 90 days before the date of the Award require the written authorization of the ARPA-E Contracting Officer.

Please refer to the “Applicants’ Guide to ARPA-E Award Negotiations” ([http://arpa-e.energy.gov/sites/default/files/Award\\_Negotiations\\_Guide%20%20March%202015.pdf](http://arpa-e.energy.gov/sites/default/files/Award_Negotiations_Guide%20%20March%202015.pdf)) for additional guidance on pre-award costs.

### **3. PATENT COSTS**

For Subject Inventions disclosed to DOE under an award, ARPA-E will reimburse the Prime Recipient – in addition to allowable costs associated with Subject Invention disclosures - up to \$30,000 of expenditures for filing and prosecution of United States patent applications, including international applications (“PCT application”) submitted to the USPTO.

The Prime Recipient may request a waiver of the \$30,000 cap. Because all patent costs are considered to be Technology Transfer & Outreach (TT&O) costs (see Section IV.G.8 of the FOA below), the waiver request is subject to approval by the ARPA-E Program Director and Contracting Officer.

### **4. CONSTRUCTION**

ARPA-E generally does not fund projects that involve major construction. Recipients are required to obtain written authorization from the Contracting Officer before incurring any major construction costs.

### **5. FOREIGN TRAVEL**

ARPA-E generally does not fund projects that involve foreign travel. Recipients are required to obtain written authorization from the Contracting Officer before incurring any foreign travel costs and provide trip reports with their reimbursement requests.

### **6. PERFORMANCE OF WORK IN THE UNITED STATES**

ARPA-E strongly encourages interdisciplinary and cross-sectoral collaboration spanning organizational boundaries. Such collaboration enables the achievement of scientific and technological outcomes that were previously viewed as extremely difficult, if not impossible.

ARPA-E requires all work under ARPA-E funding agreements to be performed in the United States – i.e., Prime Recipients must expend 100% of the Total Project Cost in the United States.

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

However, Applicants may request a waiver of this requirement where their project would materially benefit from, or otherwise requires, certain work to be performed overseas.

Applicants seeking a waiver of this requirement are required to include an explicit request in the Business Assurances & Disclosures Form, which is part of the Full Application submitted to ARPA-E. Such waivers are granted where there is a demonstrated need, as determined by ARPA-E.

## **7. PURCHASE OF NEW EQUIPMENT**

All equipment purchased under ARPA-E funding agreements must be made or manufactured in the United States, to the maximum extent practicable. This requirement does not apply to used or leased equipment. The Prime Recipients are required to notify the ARPA-E Contracting Officer reasonably in advance of purchasing any equipment that is not made or manufactured in the United States with an acquisition cost of \$25,000 or more per unit. The ARPA-E Contracting Officer will provide consent to purchase or reject within 30 calendar days of receipt of the Recipient's notification.

## **8. TECHNOLOGY TRANSFER AND OUTREACH**

ARPA-E is required to contribute a percentage of appropriated funds to Technology Transfer and Outreach (TT&O) activities. In order to meet this mandate every Project Team must spend at least 5% of the Federal funding (i.e., the portion of the award that does not include the recipient's cost share) provided by ARPA-E on TT&O activities to promote and further the development and deployment of ARPA-E-funded technologies. Project Teams must also seek a waiver from ARPA-E to spend less than the minimum 5% TT&O expenditure requirement.

All TT&O expenditures are subject to the applicable Federal cost principles (i.e., 2 C.F.R. 200 Subpart E and 48 C.F.R. Subpart 31). Examples of TT&O expenditures are as follows:

- Documented travel and registration for the ARPA-E Energy Innovation Summit and other energy-related conferences and events;
- Documented travel to meet with potential suppliers, partners, or customers;
- Documented work by salaried or contract personnel to develop technology-to-market models or plans;
- Documented costs of acquiring industry-accepted market research reports; and
- Approved patent costs.

ARPA-E will not reimburse recipients for TT&O costs considered to be unallowable in accordance with the applicable cost principles. Examples of unallowable TT&O expenditures include:

- Meals or entertainment;
- Gifts to potential suppliers, partners, or customers;
- TT&O activities that do not relate to the ARPA-E-funded technologies;
- Undocumented TT&O activities; and
- TT&O activities unrelated and/or unallocable to the subject award.

Applicants may seek a waiver of the TT&O requirement by including an explicit request in the Business Assurances & Disclosures Form. Please refer to the Business Assurances & Disclosures Form for guidance on the content and form of the waiver request. ARPA-E may waive or modify the TT&O requirement, as appropriate.

For information regarding incorporation of TT&O costs into budget documentation, see Section IV.D.3 of the FOA.

Please refer to the “Applicants’ Guide to ARPA-E Award Negotiations” ([http://arpa-e.energy.gov/sites/default/files/Award\\_Negotiations\\_Guide%20%20March%202015.pdf](http://arpa-e.energy.gov/sites/default/files/Award_Negotiations_Guide%20%20March%202015.pdf)) for additional guidance on TT&O requirements.

## **9. LOBBYING**

Prime Recipients and Subrecipients may not use any Federal funds, directly or indirectly, to influence or attempt to influence, directly or indirectly, congressional action on any legislative or appropriation matters pending before Congress, other than to communicate to Members of Congress as described in 18 U.S.C. § 1913. This restriction is in addition to those prescribed elsewhere in statute and regulation.

Prime Recipients and Subrecipients are required to complete and submit SF-LLL, “Disclosure of Lobbying Activities” (<http://www.whitehouse.gov/sites/default/files/omb/grants/sflllin.pdf>) if any non-Federal funds have been paid or will be paid to any person for influencing or attempting to influence any of the following in connection with your application:

- An officer or employee of any Federal agency,
- A Member of Congress,

- An officer or employee of Congress, or
- An employee of a Member of Congress.

## **10. CONFERENCE SPENDING**

Prime Recipients and Subrecipients may not use any Federal funds to:

- Defray the cost to the United States Government of a conference held by any Executive branch department, agency, board, commission, or office which is not directly and programmatically related to the purpose for which their ARPA-E award is made and for which the cost to the United States Government is more than \$20,000; or
- To circumvent the required notification by the head of any such Executive Branch department, agency, board, commission, or office to the Inspector General (or senior ethics official for any entity without an Inspector General), of the date, location, and number of employees attending such a conference.

## **11. INDEPENDENT RESEARCH AND DEVELOPMENT COSTS**

ARPA-E does not fund Independent Research and Development (IR&D) as part of an indirect cost rate under its financial assistance awards. IR&D, as defined at FAR 31.205-18(a), includes cost of effort that is not sponsored by an assistance agreement or required in performance of a contract, and that consists of projects falling within the four following areas: (i) basic research, (ii) applied research, (iii) development, and (iv) systems and other concept formulation studies.

ARPA-E's goals are to enhance the economic and energy security of the United States through the development of energy technologies and ensure that the United States maintains a technological lead in developing and deploying advanced energy technologies. ARPA-E accomplishes these goals by providing financial assistance for energy technology projects, and has well recognized and established procedures for supporting research through competitive financial assistance awards based on merit review of proposed projects. Reimbursement for independent research and development costs through the indirect cost mechanism could circumvent this competitive process.

To ensure that all projects receive similar and equal consideration, eligible organizations may compete for direct funding of independent research projects they consider worthy of support by submitting proposals for those projects to ARPA-E. Since proposals for these projects may be submitted for direct funding, costs for independent research and development projects are not allowable as indirect costs under ARPA-E awards. IR&D costs, however, would still be

included in the direct cost base that is used to calculate the indirect rate so as to ensure an appropriate allocation of indirect costs to the organization's direct cost centers.

## H. OTHER SUBMISSION REQUIREMENTS

### 1. **USE OF ARPA-E eXCHANGE**

To apply to this FOA, Applicants must register with ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov/Registration.aspx>). Concept Papers, Full Applications, and Replies to Reviewer Comments must be submitted through ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov/login.aspx>). ARPA-E will not review or consider applications submitted through other means (e.g., fax, hand delivery, email, postal mail). For detailed guidance on using ARPA-E eXCHANGE, please refer to the "ARPA-E eXCHANGE User Guide" (<https://arpa-e-foa.energy.gov/Manuals.aspx>).

Upon creating an application submission in ARPA-E eXCHANGE, Applicants will be assigned a Control Number. If the Applicant creates more than one application submission, a different Control Number will be assigned for each application.

Once logged in to ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov/login.aspx>), Applicants may access their submissions by clicking the "My Submissions" link in the navigation on the left side of the page. Every application that the Applicant has submitted to ARPA-E and the corresponding Control Number is displayed on that page. If the Applicant submits more than one application to a particular FOA, a different Control Number is shown for each application.

Applicants are responsible for meeting each submission deadline in ARPA-E eXCHANGE. **Applicants are strongly encouraged to submit their applications at least 48 hours in advance of the submission deadline.** Under normal conditions (i.e., at least 48 hours in advance of the submission deadline), Applicants should allow at least 1 hour to submit a Concept Paper, or Full Application. In addition, Applicants should allow at least 15 minutes to submit a Reply to Reviewer Comments. Once the application is submitted in ARPA-E eXCHANGE, Applicants may revise or update their application until the expiration of the applicable deadline.

**Applicants should not wait until the last minute to begin the submission process.** During the final hours before the submission deadline, Applicants may experience server/connection congestion that prevents them from completing the necessary steps in ARPA-E eXCHANGE to submit their applications. **ARPA-E will not extend the submission deadline for Applicants that fail to submit required information and documents due to server/connection congestion.**

**ARPA-E will not review or consider incomplete applications and applications received after the deadline stated in the FOA.** Such applications will be deemed noncompliant (see Section III.C.1 of the FOA). The following errors could cause an application to be deemed "incomplete" and thus noncompliant:

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- Failing to comply with the form and content requirements in Section IV of the FOA;
- Failing to enter required information in ARPA-E eXCHANGE;
- Failing to upload required document(s) to ARPA-E eXCHANGE;
- Failing to click the “Submit” button in ARPA-E eXCHANGE by the deadline stated in the FOA;
- Uploading the wrong document(s) or application(s) to ARPA-E eXCHANGE; and
- Uploading the same document twice, but labeling it as different documents. (In the latter scenario, the Applicant failed to submit a required document.)

ARPA-E urges Applicants to carefully review their applications and to allow sufficient time for the submission of required information and documents.

## **V. APPLICATION REVIEW INFORMATION**

### **A. CRITERIA**

ARPA-E performs a preliminary review of Concept Papers and Full Applications to determine whether they are compliant and responsive (see Section III.C of the FOA). ARPA-E also performs a preliminary review of Replies to Reviewer Comments to determine whether they are compliant.

ARPA-E considers a mix of quantitative and qualitative criteria in determining whether to encourage the submission of a Full Application and whether to select a Full Application for award negotiations.

#### **1. CRITERIA FOR CONCEPT PAPERS**

(1) *Impact of the Proposed Technology Relative to FOA Targets* (50%) - This criterion involves consideration of the following:

- The potential for a transformational and disruptive (not incremental) advancement compared to existing or emerging technologies;
- Achievement of the technical performance targets defined in Section I.F of the FOA for the appropriate technology Category in Section I.E of the FOA;

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- Identification of techno-economic challenges that must be overcome for the proposed technology to be commercially relevant; and
- Demonstration of awareness of competing commercial and emerging technologies and identifies how the proposed concept/technology provides significant improvement over existing solutions.

(2) *Overall Scientific and Technical Merit* (50%) - This criterion involves consideration of the following:

- The feasibility of the proposed work, as justified by appropriate background, theory, simulation, modeling, experimental data, or other sound scientific and engineering practices;
- Sufficiency of technical approach to accomplish the proposed R&D objectives, including why the proposed concept is more appropriate than alternative approaches and how technical risk will be mitigated;
- Clearly defined project outcomes and final deliverables; and
- The demonstrated capabilities of the individuals performing the project, the key capabilities of the organizations comprising the Project Team, the roles and responsibilities of each organization and (if applicable) previous collaborations among team members supporting the proposed project.

Submissions will not be evaluated against each other since they are not submitted in accordance with a common work statement. The above criteria will be weighted as follows:

Impact of the Proposed Technology Relative to FOA Targets	50%
Overall Scientific and Technical Merit	50%

## 2. CRITERIA FOR FULL APPLICATIONS

Full Applications are evaluated based on the following criteria:

(1) *Impact of the Proposed Technology* (30%) - This criterion involves consideration of the following:

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- The potential for a transformational and disruptive (not incremental) advancement in one or more energy-related fields;
- Thorough understanding of the current state-of-the-art and presentation of an innovative technical approach to significantly improve performance over the current state-of-the-art;
- Awareness of competing commercial and emerging technologies and identification of how the proposed concept/technology provides significant improvement over these other solutions; and
- A reasonable and effective strategy for transitioning the proposed technology from the laboratory to commercial deployment.

(2) *Overall Scientific and Technical Merit* (30%) - This criterion involves consideration of the following:

- Whether the proposed work is unique and innovative;
- Clearly defined project outcomes and final deliverables;
- Substantiation that the proposed project is likely to meet or exceed the technical performance targets identified in this FOA;
- Feasibility of the proposed work based upon preliminary data or other background information and sound scientific and engineering practices and principles;
- A sound technical approach, including appropriately defined technical tasks, to accomplish the proposed R&D objectives; and
- Management of risk, to include identifying major technical R&D risks and feasible, effective mitigation strategies.

(3) *Qualifications, Experience, and Capabilities of the Proposed Project Team* (30%) - This criterion involves consideration of the following:

- The PI and Project Team have the skill and expertise needed to successfully execute the project plan, evidenced by prior experience that demonstrates an ability to perform R&D of similar risk and complexity; and
- Access to the equipment and facilities necessary to accomplish the proposed R&D

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

effort and/or a clear plan to obtain access to necessary equipment and facilities.

(4) *Soundness of Management Plan* (10%) - This criterion involves consideration of the following:

- Plausibility of plan to manage people and resources;
- Allocation of appropriate levels of effort and resources to proposed tasks;
- Reasonableness of the proposed project schedule, including major milestones; and
- Reasonableness of the proposed budget to accomplish the proposed project.

Submissions will not be evaluated against each other since they are not submitted in accordance with a common work statement.

### **3. CRITERIA FOR REPLIES TO REVIEWER COMMENTS**

ARPA-E has not established separate criteria to evaluate Replies to Reviewer Comments. Instead, Replies to Reviewer Comments are evaluated as an extension of the Full Application.

## **B. REVIEW AND SELECTION PROCESS**

### **1. PROGRAM POLICY FACTORS**

In addition to the above criteria, ARPA-E may consider the following program policy factors in determining which Concept Papers to encourage to submit a Full Application and which Full Applications to select for award negotiations:

- I. **ARPA-E Portfolio Balance.** Project balances ARPA-E portfolio in one or more of the following areas:
  - a. Diversity (including gender) of technical personnel in the proposed Project Team;
  - b. Technological diversity;
  - c. Organizational diversity;
  - d. Geographic diversity;
  - e. Technical or commercialization risk; or
  - f. Stage of technology development.
- II. **Relevance to ARPA-E Mission Advancement.** Project contributes to one or more of ARPA-E's key statutory goals:
  - a. Reduction of US dependence on foreign energy sources;

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- b. Stimulation of domestic manufacturing/U.S. Manufacturing Plan;
- c. Reduction of energy-related emissions;
- d. Increase in U.S. energy efficiency;
- e. Enhancement of U.S. economic and energy security; or
- f. Promotion of U.S. advanced energy technologies competitiveness.

III. **Synergy of Public and Private Efforts.**

- a. Avoids duplication and overlap with other publicly or privately funded projects;
- b. Promotes increased coordination with nongovernmental entities for demonstration of technologies and research applications to facilitate technology transfer; or
- c. Increases unique research collaborations.

IV. **Low likelihood of other sources of funding.** High technical and/or financial uncertainty that results in the non-availability of other public, private or internal funding or resources to support the project.

V. **High-Leveraging of Federal Funds.** Project leverages Federal funds to optimize advancement of programmatic goals by proposing cost share above the required minimum or otherwise accessing scarce or unique resources.

VI. **High Project Impact Relative to Project Cost.**

## 2. ARPA-E REVIEWERS

By submitting an application to ARPA-E, Applicants consent to ARPA-E's use of Federal employees, contractors, and experts from educational institutions, nonprofits, industry, and governmental and intergovernmental entities as reviewers. ARPA-E selects reviewers based on their knowledge and understanding of the relevant field and application, their experience and skills, and their ability to provide constructive feedback on applications.

ARPA-E requires all reviewers to complete a Conflict-of-Interest Certification and Nondisclosure Agreement through which they disclose their knowledge of any actual or apparent conflicts and agree to safeguard confidential information contained in Concept Papers, Full Applications, and Replies to Reviewer Comments. In addition, ARPA-E trains its reviewers in proper evaluation techniques and procedures.

Applicants are not permitted to nominate reviewers for their applications. Applicants may contact the Contracting Officer by email ([ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov)) if they have knowledge of a potential conflict of interest or a reasonable belief that a potential conflict exists.

## 3. ARPA-E SUPPORT CONTRACTOR

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

ARPA-E utilizes contractors to assist with the evaluation of applications and project management. To avoid actual and apparent conflicts of interest, ARPA-E prohibits its support contractors from submitting or participating in the preparation of applications to ARPA-E.

By submitting an application to ARPA-E, Applicants represent that they are not performing support contractor services for ARPA-E in any capacity and did not obtain the assistance of ARPA-E's support contractor to prepare the application. ARPA-E will not consider any applications that are submitted by or prepared with the assistance of its support contractors.

### **C. ANTICIPATED ANNOUNCEMENT AND AWARD DATES**

ARPA-E expects to announce selections for negotiations in approximately July 2017 and to execute funding agreements in approximately November 2017.

## **VI. AWARD ADMINISTRATION INFORMATION**

### **A. AWARD NOTICES**

#### **1. REJECTED SUBMISSIONS**

Noncompliant and nonresponsive Concept Papers and Full Applications are rejected by the Contracting Officer and are not merit reviewed or considered for award. The Contracting Officer sends a notification letter by email to the technical and administrative points of contact designated by the Applicant in ARPA-E eXCHANGE. The notification letter states the basis upon which the Concept Paper or Full Application was rejected.

#### **2. CONCEPT PAPER NOTIFICATIONS**

ARPA-E promptly notifies Applicants of its determination to encourage or discourage the submission of a Full Application. ARPA-E sends a notification letter by email to the technical and administrative points of contact designated by the Applicant in ARPA-E eXCHANGE. ARPA-E provides feedback in the notification letter in order to guide further development of the proposed technology.

Applicants may submit a Full Application even if they receive a notification discouraging them from doing so. By discouraging the submission of a Full Application, ARPA-E intends to convey its lack of programmatic interest in the proposed project. Such assessments do not necessarily reflect judgments on the merits of the proposed project. The purpose of the Concept Paper phase is to save Applicants the considerable time and expense of preparing a Full Application that is unlikely to be selected for award negotiations.

A notification letter encouraging the submission of a Full Application does not authorize the Applicant to commence performance of the project. Please refer to Section IV.G.2 of the FOA for guidance on pre-award costs.

### 3. FULL APPLICATION NOTIFICATIONS

ARPA-E promptly notifies Applicants of its determination. ARPA-E sends a notification letter by email to the technical and administrative points of contact designated by the Applicant in ARPA-E eXCHANGE. The notification letter may inform the Applicant that its Full Application was selected for award negotiations, or not selected. Alternatively, ARPA-E may notify one or more Applicants that a final selection determination on particular Full Applications will be made at a later date, subject to the availability of funds or other factors.

Written feedback on Full Applications is made available to Applicants before the submission deadline for Replies to Reviewer Comments. By providing feedback, ARPA-E intends to guide the further development of the proposed technology and to provide a brief opportunity to respond to reviewer comments.

#### ***a. SUCCESSFUL APPLICANTS***

ARPA-E has discretion to select all or part of a proposed project for negotiation of an award. A notification letter selecting a Full Application for award negotiations does not authorize the Applicant to commence performance of the project. **ARPA-E selects Full Applications for award negotiations, not for award.** Applicants do not receive an award until award negotiations are complete and the Contracting Officer executes the funding agreement. ARPA-E may terminate award negotiations at any time for any reason.

Please refer to Section IV.G.2 of the FOA for guidance on pre-award costs. Please also refer to the “Applicants’ Guide to ARPA-E Award Negotiations” ([http://arpa-e.energy.gov/sites/default/files/Award\\_Negotiations\\_Guide%20%20March%202015.pdf](http://arpa-e.energy.gov/sites/default/files/Award_Negotiations_Guide%20%20March%202015.pdf)) for guidance on the award negotiation process.

#### ***b. POSTPONED SELECTION DETERMINATIONS***

A notification letter postponing a final selection determination until a later date does not authorize the Applicant to commence performance of the project. ARPA-E may ultimately determine to select or not select the Full Application for award negotiations.

Please refer to Section IV.G.2 of the FOA for guidance on pre-award costs.

### **C. UNSUCCESSFUL APPLICANTS**

By not selecting a Full Application, ARPA-E intends to convey its lack of programmatic interest in the proposed project. Such assessments do not necessarily reflect judgments on the merits of the proposed project. ARPA-E hopes that unsuccessful Applicants will submit innovative ideas and concepts for future FOAs.

### **B. ADMINISTRATIVE AND NATIONAL POLICY REQUIREMENTS**

~~[TO BE INSERTED BY FOA MODIFICATION IN MARCH 2017]~~

The following administrative and national policy requirements apply to Prime Recipients. The Prime Recipient is the responsible authority regarding the settlement and satisfaction of all contractual and administrative issues, including but not limited to disputes and claims arising out of any agreement between the Prime Recipient and a FFRDC contractor. Prime Recipients are required to flow down these requirements to their Subrecipients through subawards or related agreements.

#### **1. DUNS NUMBER AND SAM, FSRs, AND FEDCONNECT REGISTRATIONS**

Prime Recipients and Subrecipients are required to obtain a Dun and Bradstreet Data Universal Numbering System (DUNS) number at <http://fedgov.dnb.com/webform> and to register with the System for Award Management (SAM) at <https://www.sam.gov/portal/public/SAM/>.

Prime Recipients and Subrecipients should commence this process as soon as possible in order to expedite the execution of a funding agreement. Obtaining a DUNS number and registering with SAM could take several weeks.

Prime Recipients are also required to register with the Federal Funding Accountability and Transparency Act Subaward Reporting System (FSRS) at <https://www.fsr.gov/>.<sup>30</sup> Prime Recipients are required to report to FSRS the names and total compensation of each of the Prime Recipient's five most highly compensated executives and the names and total compensation of each Subrecipient's five most highly compensated executives. Please refer to <https://www.fsr.gov/> for guidance on reporting requirements.

ARPA-E may not execute a funding agreement with the Prime Recipient until it has obtained a DUNS number and completed its SAM and FSRS registrations. In addition, the Prime Recipient may not execute subawards with Subrecipients until they obtain a DUNS number and complete their SAM registration. Prime Recipients and Subrecipients are required to keep their SAM and FSRS data current throughout the duration of the project.

Finally, Prime Recipients are required to register with FedConnect in order to receive notification that their funding agreement has been executed by the Contracting Officer and to

<sup>15</sup> The Federal Funding Accountability and Transparency Act, P.L. 109-282, 31 U.S.C. 6101 note.

obtain a copy of the executed funding agreement. Please refer to <https://www.fedconnect.net/FedConnect/> for registration instructions.

## **2. NATIONAL POLICY ASSURANCES**

Project Teams, including Prime Recipients and Subrecipients, are required to comply with the National Policy Assurances attached to their funding agreement in accordance with 2 C.F.R. 200.300. Please refer to Attachment 6 of ARPA-E's Model Cooperative Agreement (<http://arpa-e.energy.gov/FundingAgreements/CooperativeAgreements.aspx>) for information on the National Policy Assurances.

## **3. PROOF OF COST SHARE COMMITMENT AND ALLOWABILITY**

Upon selection for award negotiations, the Prime Recipient must confirm in writing that the proposed cost share contribution is allowable in accordance with applicable Federal cost principles.

The Prime Recipient is also required to provide cost share commitment letters from Subrecipients or third parties that are providing cost share, whether cash or in-kind. Each Subrecipient or third party that is contributing cost share must provide a letter on appropriate letterhead that is signed by an authorized corporate representative. Please refer to the "Applicants' Guide to ARPA-E Award Negotiations" ([http://arpa-e.energy.gov/sites/default/files/Award\\_Negotiations\\_Guide%20%20March%202015.pdf](http://arpa-e.energy.gov/sites/default/files/Award_Negotiations_Guide%20%20March%202015.pdf)) for guidance on the contents of cost share commitment letters.

## **4. COST SHARE PAYMENTS<sup>31</sup>**

All proposed cost share contributions must be reviewed in advance by the Contracting Officer and incorporated into the project budget before the expenditures are incurred.

The Prime Recipient is required to pay the "Cost Share" amount as a percentage of the total project costs in each invoice period for the duration of the period of performance. Small Businesses see Section III.B.3 of the FOA.

Please refer to the "Applicants' Guide to ARPA-E Award Negotiations" ([http://arpa-e.energy.gov/sites/default/files/Award\\_Negotiations\\_Guide%20%20March%202015.pdf](http://arpa-e.energy.gov/sites/default/files/Award_Negotiations_Guide%20%20March%202015.pdf)) for additional guidance on cost share payment requirements.

ARPA-E may deny reimbursement requests, in whole or in part, or modify or terminate funding agreements where Prime Recipients (or Project Teams) fail to comply with ARPA-E's cost share payment requirements.

---

<sup>16</sup> Please refer to Section III.B of the FOA for guidance on cost share requirements.

## **5. ENVIRONMENTAL IMPACT QUESTIONNAIRE**

By law, ARPA-E is required to evaluate the potential environmental impact of projects that it is considering for funding. In particular, ARPA-E must determine before funding a project whether the project qualifies for a categorical exclusion under 10 C.F.R. § 1021.410 or whether it requires further environmental review (i.e., an environmental assessment or an environmental impact statement).

To facilitate and expedite ARPA-E's environmental review, Prime Recipients are required to complete an Environmental Impact Questionnaire during award negotiations. This form is available on ARPA-E eXCHANGE at <https://arpa-e-foa.energy.gov>. The Environmental Impact Questionnaire is due within 21 calendar days of the selection announcement.

## **6. TECHNOLOGY-TO-MARKET PLAN**

During award negotiations, Prime Recipients are required to negotiate and submit an initial Technology-to-Market Plan to the ARPA-E Program Director, and obtain the ARPA-E Program Director's approval prior to the execution of the award. Prime Recipients must show how budgeted Technology Transfer and Outreach (TT&O) costs relate to furthering elements of the Technology-to-Market Plan. During the period of performance, Prime Recipients are required to provide regular updates on the initial Technology-to-Market plan and report on implementation of Technology-to-Market activities. Prime Recipients may be required to perform other actions to further the commercialization of their respective technologies.

ARPA-E may waive or modify this requirement, as appropriate.

## **7. INTELLECTUAL PROPERTY AND DATA MANAGEMENT PLANS**

ARPA-E requires every Project Team to negotiate and establish an Intellectual Property Management Plan for the management and disposition of intellectual property arising from the project. The Prime Recipient must submit a completed and signed Intellectual Property Management plan to ARPA-E within six weeks of the effective date of the ARPA-E funding agreement. All Intellectual Property Management Plans are subject to the terms and conditions of the ARPA-E funding agreement and its intellectual property provisions, and applicable Federal laws, regulations, and policies, all of which take precedence over the terms of Intellectual Property Management Plans.

ARPA-E has developed a template for Intellectual Property Management Plans (<http://arpa-e.energy.gov/FundingAgreements/Overview.aspx>) so as to facilitate and expedite negotiations between Project Team members. ARPA-E does not mandate the use of this template. ARPA-E and DOE do not make any warranty (express or implied) or assume any liability or responsibility

for the accuracy, completeness, or usefulness of the template. ARPA-E and DOE strongly encourage Project Teams to consult independent legal counsel before using the template.

Awardees are also required, post-award, to submit a Data Management Plan (DMP) that addresses how data generated in the course of the work performed under an ARPA-E award will be preserved and, as appropriate, shared publicly. The Prime Recipient must submit a completed and signed DMP - as part of the Team's Intellectual Property Management Plan - to ARPA-E within six weeks of the effective date of the ARPA-E funding agreement. The DMP must meet the minimum requirements set forth in ARPA-E's "Applicant Guide to Award Negotiations" available at the following website: <http://arpa-e.energy.gov/?q=arpa-e-site-page/pre-award-guidance>."

## **8. U.S. MANUFACTURING REQUIREMENT**

In addition to treatment of the U.S. Manufacturing Plan described above in Section IV.D.7 of the FOA, ARPA-E requires products embodying or produced through the use of subject inventions (i.e., inventions conceived or first actually reduced to practice under ARPA-E funding agreements) to be substantially manufactured in the United States by Project Teams and their licensees, as described below. The Applicant may request a modification or waiver of the U.S. Manufacturing Requirement.

### ***a. SMALL BUSINESSES***

Small businesses (including Small Business Concerns) that are Prime Recipients or Subrecipients under ARPA-E funding agreements are required to substantially manufacture the following products in the United States for any use or sale in the United States: (1) products embodying subject inventions, and (2) products produced through the use of subject invention(s).<sup>32</sup> This requirement does not apply to products that are manufactured for use or sale outside the U.S. A.

Small businesses must apply the same U.S. Manufacturing requirements to their assignees, licensees, and entities acquiring a controlling interest in the small business. Small businesses must require their assignees and entities acquiring a controlling interest in the small business to apply the same U.S. Manufacturing requirements to their licensees.

### ***b. LARGE BUSINESSES AND FOREIGN ENTITIES***

Large businesses and foreign entities that are Prime Recipients or Subrecipients under ARPA-E funding agreements are required to substantially manufacture the following products in the

---

<sup>32</sup> Small businesses are generally defined as domestically incorporated entities that meet the criteria established by the U.S. Small Business Administration's "Table of Small Business Size Standards Matched to North American Industry Classification System Codes" (<http://www.sba.gov/content/small-business-size-standards>).

United States: (1) products embodying subject inventions, and (2) products produced through the use of subject invention(s).<sup>33</sup> This requirement applies to products that are manufactured for use or sale in the United States and outside the United States.

Large businesses and foreign entities must apply the same U.S. Manufacturing requirements to their assignees, licensees, and entities acquiring a controlling interest in the large business or foreign entity. Large businesses and foreign entities must require their assignees and entities acquiring a controlling interest in the large business or foreign entity to apply the same U.S. Manufacturing requirements to their licensees.

### ***c. EDUCATIONAL INSTITUTIONS AND NONPROFITS***

Domestic educational institutions and nonprofits that are Prime Recipients or Subrecipients under ARPA-E funding agreements must require their exclusive licensees to substantially manufacture the following products in the United States for any use or sale in the United States: (1) articles embodying subject inventions, and (2) articles produced through the use of subject invention(s). This requirement does not apply to articles that are manufactured for use or sale overseas.

Educational institutions and nonprofits must require their assignees to apply the same U.S. Manufacturing requirements to their exclusive licensees.

### ***d. FFRDCs/DOE Labs and State and Local Government Entities***

FFRDCs/DOE Labs that are GOCOs and state and local government entities are subject to the same U.S. Manufacturing requirements as domestic educational institutions and nonprofits. GOGOs are subject to the requirements in 37 CFR § 404.5(a)(2).

## **9. CORPORATE FELONY CONVICTIONS AND FEDERAL TAX LIABILITY**

In submitting an application in response to this FOA, the Applicant represents that:

- It is not a corporation that has been convicted of a felony criminal violation under any Federal law within the preceding 24 months; and

---

<sup>33</sup> Large businesses are generally defined as domestically incorporated entities that do not meet the criteria established by the U.S. Small Business Administration's "Table of Small Business Size Standards Matched to North American Industry Classification System Codes" (<http://www.sba.gov/content/small-business-size-standards>).

- It is not a corporation that has any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability.

For purposes of these representations the following definitions apply: A Corporation includes any entity that has filed articles of incorporation in any of the 50 states, the District of Columbia, or the various territories of the United States [but not foreign corporations]. It includes both for-profit and non-profit organizations.

## **10. APPLICANT RISK ANALYSIS**

If selected for award negotiations, ARPA-E may evaluate the risks posed by the Applicant using the criteria set forth at 2 CFR §200.205(c), subparagraphs (1) through (4). ARPA-E may require special award terms and conditions depending upon results of the risk analysis.

## **11. RECIPIENT INTEGRITY AND PERFORMANCE MATTERS**

Prior to making a Federal award with a total amount of Federal share greater than the simplified acquisition threshold (presently \$150,000), ARPA-E is required to review and consider any information about Applicants that is contained in the Office of Management and Budget's designated integrity and performance system accessible through SAM (currently the Federal Awardee Performance and Integrity Information System or FAPIIS) (41 U.S.C. § 2313 and 2 C.F.R. 200.205).

Applicants may review information in FAPIIS and comment on any information about itself that a Federal awarding agency previously entered into FAPIIS.

ARPA-E will consider any written comments provided by Applicants during award negotiations, in addition to the other information in FAPIIS, in making a judgment about an Applicant's integrity, business ethics, and record of performance under Federal awards when reviewing potential risk posed by Applicants as described in 2 C.F.R. §200.205.

## 12. NONDISCLOSURE AND CONFIDENTIALITY AGREEMENTS REPRESENTATIONS

In submitting an application in response to this FOA the Applicant represents that:

- (1) **It does not and will not** require its employees or contractors to sign internal nondisclosure or confidentiality agreements or statements prohibiting or otherwise restricting its employees or contractors from lawfully reporting waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.
- (2) **It does not and will not** use any Federal funds to implement or enforce any nondisclosure and/or confidentiality policy, form, or agreement it uses unless it contains the following provisions:
  - a. *“These provisions are consistent with and do not supersede, conflict with, or otherwise alter the employee obligations, rights, or liabilities created by existing statute or Executive order relating to (1) classified information, (2) communications to Congress, (3) the reporting to an Inspector General of a violation of any law, rule, or regulation, or mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety, or (4) any other whistleblower protection. The definitions, requirements, obligations, rights, sanctions, and liabilities created by controlling Executive orders and statutory provisions are incorporated into this agreement and are controlling.”*
  - b. The limitation above shall not contravene requirements applicable to Standard Form 312, Form 4414, or any other form issued by a Federal department or agency governing the nondisclosure of classified information.
  - c. Notwithstanding provision listed in paragraph (a), a nondisclosure confidentiality policy form or agreement that is to be executed by a person connected with the conduct of an intelligence or intelligence-related activity, other than an employee or officer of the United States Government, may contain provisions appropriate to the particular activity for which such document is to be used. Such form or agreement shall, at a minimum, require that the person will not disclose any classified information received in the course of such activity unless specifically authorized to do so by the United States Government. Such nondisclosure or confidentiality forms shall also make it clear that they do not bar disclosure to congress, or to an authorized official of an executive agency or the Department of Justice, that are essential to reporting a substantial violation of law.

## **C. REPORTING**

Recipients are required to submit periodic, detailed reports on technical, financial, and other aspects of the project, as described in Attachment 4 to ARPA-E's Model Cooperative Agreement (<http://arpa-e.energy.gov/arpa-e-site-page/award-guidance>).

## **VII. AGENCY CONTACTS**

### **A. COMMUNICATIONS WITH ARPA-E**

Upon the issuance of a FOA, only the Contracting Officer may communicate with Applicants. ARPA-E personnel and our support contractors are prohibited from communicating (in writing or otherwise) with Applicants regarding the FOA. This "quiet period" remains in effect until ARPA-E's public announcement of its project selections.

During the "quiet period," Applicants are required to submit all questions regarding this FOA to [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov). Questions and Answers (Q&As) about ARPA-E and the FOA are available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, please send an email with the FOA name and number in the subject line to [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov). Due to the volume of questions received, ARPA-E will only answer pertinent questions that have not yet been answered and posted at the above link.

- ARPA-E will post responses on a weekly basis to any questions that are received that have not already been addressed at the link above. ARPA-E may re-phrase questions or consolidate similar questions for administrative purposes.
- ARPA-E will cease to accept questions approximately 510 business days in advance of each submission deadline. Responses to questions received before the cutoff will be posted approximately one business day in advance of the submission deadline. ARPA-E may re-phrase questions or consolidate similar questions for administrative purposes.
- Responses are published in a document specific to this FOA under "CURRENT FUNDING OPPORTUNITIES – FAQs" on ARPA-E's website (<http://arpa-e.energy.gov/faq>).

Applicants may submit questions regarding ARPA-E eXCHANGE, ARPA-E's online application portal, to [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov). ARPA-E will promptly respond to emails that raise legitimate, technical issues with ARPA-E eXCHANGE. ARPA-E will refer any questions regarding the FOA to [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov).

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

ARPA-E will not accept or respond to communications received by other means (e.g., fax, telephone, mail, hand delivery). Emails sent to other email addresses will be disregarded.

During the “quiet period,” only the Contracting Officer may authorize communications between ARPA-E personnel and Applicants. The Contracting Officer may communicate with Applicants as necessary and appropriate. As described in Section IV.A of the FOA, the Contracting Officer may arrange pre-selection meetings and/or site visits during the “quiet period.”

## **B. DEBRIEFINGS**

ARPA-E does not offer or provide debriefings. ARPA-E provides Applicants with a notification encouraging or discouraging the submission of a Full Application based on ARPA-E’s assessment of the Concept Paper. In addition, ARPA-E provides Applicants with reviewer comments on Full Applications before the submission deadline for Replies to Reviewer Comments.

## **VIII. OTHER INFORMATION**

### **A. FOAs AND FOA MODIFICATIONS**

FOAs are posted on ARPA-E eXCHANGE (<https://arpa-e-foa.energy.gov/>), Grants.gov (<http://www.grants.gov/>), and FedConnect (<https://www.fedconnect.net/FedConnect/>). Any modifications to the FOA are also posted to these websites. You can receive an e-mail when a modification is posted by registering with FedConnect as an interested party for this FOA. It is recommended that you register as soon as possible after release of the FOA to ensure that you receive timely notice of any modifications or other announcements. More information is available at <https://www.fedconnect.net>.

### **B. OBLIGATION OF PUBLIC FUNDS**

The Contracting Officer is the only individual who can make awards on behalf of ARPA-E or obligate ARPA-E to the expenditure of public funds. A commitment or obligation by any individual other than the Contracting Officer, either explicit or implied, is invalid.

ARPA-E awards may not be transferred, assigned, or assumed without the prior written consent of a Contracting Officer.

### **C. REQUIREMENT FOR FULL AND COMPLETE DISCLOSURE**

Applicants are required to make a full and complete disclosure of the information requested in the Business Assurances & Disclosures Form. Disclosure of the requested information is mandatory. Any failure to make a full and complete disclosure of the requested information may result in:

- The rejection of a Concept Paper, Full Application, and/or Reply to Reviewer Comments;
- The termination of award negotiations;
- The modification, suspension, and/or termination of a funding agreement;
- The initiation of debarment proceedings, debarment, and/or a declaration of ineligibility for receipt of Federal contracts, subcontracts, and financial assistance and benefits; and
- Civil and/or criminal penalties.

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

#### **D. RETENTION OF SUBMISSIONS**

ARPA-E expects to retain copies of all Concept Papers, Full Applications, Replies to Reviewer Comments, and other submissions. No submissions will be returned. By applying to ARPA-E for funding, Applicants consent to ARPA-E's retention of their submissions.

#### **E. MARKING OF CONFIDENTIAL INFORMATION**

ARPA-E will use data and other information contained in Concept Papers, Full Applications, and Replies to Reviewer Comments strictly for evaluation purposes.

Concept Papers, Full Applications, Replies to Reviewer Comments, and other submissions containing confidential, proprietary, or privileged information must be marked as described below. Failure to comply with these marking requirements may result in the disclosure of the unmarked information under the Freedom of Information Act or otherwise. The U.S. Government is not liable for the disclosure or use of unmarked information, and may use or disclose such information for any purpose.

The cover sheet of the Concept Paper, Full Application, Reply to Reviewer Comments, or other submission must be marked as follows and identify the specific pages containing confidential, proprietary, or privileged information:

Notice of Restriction on Disclosure and Use of Data:

Pages [\_\_\_] of this document may contain confidential, proprietary, or privileged information that is exempt from public disclosure. Such information shall be used or disclosed only for evaluation purposes or in accordance with a financial assistance or loan agreement between the submitter and the Government. The Government may use or disclose any information that is not appropriately marked or otherwise restricted, regardless of source.

The header and footer of every page that contains confidential, proprietary, or privileged information must be marked as follows: "Contains Confidential, Proprietary, or Privileged Information Exempt from Public Disclosure." In addition, every line and paragraph containing proprietary, privileged, or trade secret information must be clearly marked with double brackets or highlighting.

#### **F. TITLE TO SUBJECT INVENTIONS**

Ownership of subject inventions is governed pursuant to the authorities listed below. Typically, either by operation of law or under the authority of a patent waiver, Prime Recipients and Subrecipients may elect to retain title to their subject inventions under ARPA-E funding agreements.

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- Domestic Small Businesses, Educational Institutions, and Nonprofits: Under the Bayh-Dole Act (35 U.S.C. § 200 et seq.), domestic small businesses, educational institutions, and nonprofits may elect to retain title to their subject inventions. If they elect to retain title, they must file a patent application in a timely fashion.
- All other parties: The Federal Non-Nuclear Energy Research and Development Act of 1974, 42 U.S.C. 5908, provides that the Government obtains title to new inventions unless a waiver is granted (*see below*).
- Class Waiver: Under 42 U.S.C. § 5908, title to subject inventions vests in the U.S. Government and large businesses and foreign entities do not have the automatic right to elect to retain title to subject inventions. However, ARPA-E typically issues “class patent waivers” under which large businesses and foreign entities that meet certain stated requirements, such as cost sharing of at least 20% may elect to retain title to their subject inventions. If a large business or foreign entity elects to retain title to its subject invention, it must file a patent application in a timely fashion. If the class waiver does not apply, a party may request a waiver in accordance with 10 C.F.R. §784.
- GOGOs are subject to the requirements of 37 C.F.R. Part 501.
- Determination of Exceptional Circumstances (DEC): Each Applicant is required to submit a U.S. Manufacturing Plan as part of its Full Application. The U.S. manufacture provision included in Attachment 2 of an award is included as part of the U.S. Manufacturing Plan. If selected, the U.S. Manufacturing Plan may be incorporated into the award terms and conditions for domestic small businesses and nonprofit organizations. DOE has determined that exceptional circumstances exist that warrants the modification of the standard patent rights clause for small businesses and non-profit awardees under Bayh-Dole to the extent necessary to implement and enforce the U.S. Manufacturing Plan. For example, the commitments and enforcement of a U.S. Manufacturing Plan may be tied to subject inventions. Any Bayh-Dole entity (domestic small business or nonprofit organization) affected by this DEC has the right to appeal it. The DEC is dated September 9, 2013 and is available at the following link:  
<http://energy.gov/gc/downloads/determination-exceptional-circumstances-under-bayh-dole-act-energy-efficiency-renewable>.

## **G. GOVERNMENT RIGHTS IN SUBJECT INVENTIONS**

Where Prime Recipients and Subrecipients retain title to subject inventions, the U.S. Government retains certain rights.

### **1. GOVERNMENT USE LICENSE**

The U.S. Government retains a nonexclusive, nontransferable, irrevocable, paid-up license to practice or have practiced for or on behalf of the United States any subject invention throughout the world. This license extends to contractors doing work on behalf of the Government.

### **2. MARCH-IN RIGHTS**

The U.S. Government retains march-in rights with respect to all subject inventions. Through “march-in rights,” the Government may require a Prime Recipient or Subrecipient who has elected to retain title to a subject invention (or their assignees or exclusive licensees), to grant a license for use of the invention. In addition, the Government may grant licenses for use of the subject invention when Prime Recipients, Subrecipients, or their assignees and exclusive licensees refuse to do so.

The U.S. Government may exercise its march-in rights if it determines that such action is necessary under any of the four following conditions:

- The owner or licensee has not taken or is not expected to take effective steps to achieve practical application of the invention within a reasonable time;
- The owner or licensee has not taken action to alleviate health or safety needs in a reasonably satisfactory manner;
- The owner has not met public use requirements specified by Federal statutes in a reasonably satisfactory manner; or
- The U.S. Manufacturing requirement has not been met.

### **3. U.S. MANUFACTURING REQUIREMENT**

ARPA-E requires that awards address whether products embodying or produced through the use of subject inventions (i.e., inventions conceived or first actually reduced to practice under ARPA-E funding agreements) are to be substantially manufactured in the United States by Project Teams and their licensees. The requirement varies depending upon whether an awardee is a small business, University or other type of awardee. The Applicant may request a modification or waiver of the U.S. Manufacturing Requirement.

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

## **H. RIGHTS IN TECHNICAL DATA**

**ARPA-E awardees are required to report research results – “technical data” – achieved under their ARPA-E awards, to the extent specified in their award. The terms of the ARPA-E Cooperative Agreement are controlling – the following is a high-level summary.**

Protected Data (termed SBIR/STTR Data under such awards) is technical data **first produced under the award** (with ARPA-E funding and/or cost-share) that is protected from public release for 5 years. National Laboratories, universities, and nonprofit awardees (except for SBIR/STTR) must be specifically authorized to designate technical data as Protected Data.

Unlimited Rights Data is technical data **first produced under the award** that an awardee and ARPA-E mutually agree may be released publicly when provided to ARPA-E. Mutual agreement is provided in the negotiated “unlimited data rights list” in the awardee’s Cooperative Agreement with ARPA-E.

For technical data delivered in performance of an ARPA-E award, only Protected Data (or SBIR Data) markings should be placed by the awardee on such data. E-PIC now includes check boxes for properly marking quarterly reports as Protected Data (or SBIR Data).

ARPA-E/PDs should not request – and awardees should not provide to ARPA-E - Proprietary Data. Such data may be viewed at site visits or in awardee-retained presentations. ARPA-E has the right to inspect all Proprietary Data used in performance of the award to verify that it is Proprietary Data.

## **I. PROTECTED PERSONALLY IDENTIFIABLE INFORMATION**

Applicants may not include any Protected Personally Identifiable Information (Protected PII) in their submissions to ARPA-E. Protected PII is defined as data that, if compromised, could cause harm to an individual such as identity theft. Listed below are examples of Protected PII that Applicants must not include in their submissions.

- Social Security Numbers in any form;
- Place of Birth associated with an individual;
- Date of Birth associated with an individual;
- Mother’s maiden name associated with an individual;
- Biometric record associated with an individual;
- Fingerprint;
- Iris scan;
- DNA;
- Medical history information associated with an individual;
- Medical conditions, including history of disease;
- Metric information, e.g. weight, height, blood pressure;
- Criminal history associated with an individual;

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

- Ratings;
- Disciplinary actions;
- Performance elements and standards (or work expectations) are PII when they are so intertwined with performance appraisals that their disclosure would reveal an individual's performance appraisal;
- Financial information associated with an individual;
- Credit card numbers;
- Bank account numbers; and
- Security clearance history or related information (not including actual clearances held).

**J. COMPLIANCE AUDIT REQUIREMENT**

A prime recipient organized as a for-profit entity expending \$750,000 or more of DOE funds in the entity's fiscal year (including funds expended as a Subrecipient) must have an annual compliance audit performed at the completion of its fiscal year. For additional information, refer to Subpart F of: (i) 2 C.F.R. Part 200, and (ii) 2 C.F.R. Part 910.

If an educational institution, non-profit organization, or state/local government is either a Prime Recipient or a Subrecipient, and has expended \$750,000 or more of Federal funds in the entity's fiscal year, the entity must have an annual compliance audit performed at the completion of its fiscal year. For additional information refer to Subpart F of 2 C.F.R. Part 200.

## **IX. GLOSSARY**

**Applicant:** The entity that submits the application to ARPA-E. In the case of a Project Team, the Applicant is the lead organization listed on the application.

**Application:** The entire submission received by ARPA-E, including the Concept Paper, Full Application, and Reply to Reviewer Comments.

**ARPA-E:** is the Advanced Research Projects Agency – Energy, an agency within the U.S. Department of Energy.

**Asynchronous communication:** the deliberate transmission of communications data intermittently, rather than as a continuous stream when a conversation is happening in real-time. An example of commonly used asynchronous communications is text messaging.

**Bidirectional communication:** the sharing of information in which parties are both speaking and listening in real-time, involving the transmission of information in both directions.

**Blendshape:** the basis for a method of 3D digital animation where a surface is stored as a set of vertex positions (a “blendshape”) and new shapes may be computed by combining individual blendshapes with relative deformation weights.

**Capture:** the process of recording the dynamic state (i.e. body pose, including facial features) of a conversation participant.

**Cost Sharing:** is the portion of project costs from non-Federal sources that are borne by the Prime Recipient (or non-Federal third parties on behalf of the Prime Recipient), rather than by the Federal Government.

**Deliverable:** A deliverable is the quantifiable goods or services that will be provided upon the successful completion of a project task or sub-task.

**Digital transportation:** the use of digital information networks, such as the internet or wireless communications, to transport information across any distances to achieve the same objective for which one would now physical travel (e.g. drive, ride, fly).

**Digital communications:** the transfer of information between two or more participants using a digital information network.

**Digital human (DH):** a photorealistic and life-like animated digital representation of a human that is nearly indistinguishable audiovisually from a person perceived directly in real life.

**Digitization:** the process of encoding the captured state of a conversation participant into an information stream that can be transmitted over a data network.

Questions about this FOA? Check the Frequently Asked Questions available at <http://arpa-e.energy.gov/faq>. For questions that have not already been answered, email [ARPA-E-CO@hq.doe.gov](mailto:ARPA-E-CO@hq.doe.gov) (with FOA name and number in subject line); see FOA Sec. VII.A. Problems with ARPA-E eXCHANGE? Email [ExchangeHelp@hq.doe.gov](mailto:ExchangeHelp@hq.doe.gov) (with FOA name and number in subject line).

**Display:** the device at the end of a communication platform that presents information, usually audiovisual, to viewers or listeners of a conversation, e.g. a desktop monitor or headphones.

**DOE:** U.S. Department of Energy.

**DOE/NNSA:** U.S. Department of Energy/National Nuclear Security Administration

**Face-to-face:** in-person, co-located interaction between two or more individuals. Video conferencing, such as Skype®, is *not* considered a face-to-face interaction.

**FFRDCs:** Federally Funded Research and Development Centers.

**FOA:** Funding Opportunity Announcement.

**GOCOs:** U.S. Government Owned, Contractor Operated laboratories.

**GOGOs:** U.S. Government Owned, Government Operated laboratories.

**Immersion:** the technical characteristics of a telepresence system which lead to a sense of presence [Bailenson 2015, Slater 1997]. Such characteristics include tracking level, field of view, sound quality, update rate, user perspective, resolution, stereoscopic vision, and scale of display.

**‘Last mile’ communications:** the final leg of data sent over a telecommunications network, specifically over enterprise and home networks, originating at the internet service provider’s terminus and ending at the objective computing system (navigating through any networking routers, switches, etc.).

**Milestone:** A milestone is the tangible, observable measurement that will be provided upon the successful completion of a project task or sub-task.

**Motion capture:** the process of capturing the dynamic physical state of a person in live motion.

**Naturalness:** the similarity between a digital communication platform and face-to-face communication, based on the *medium naturalness* (i.e. the degree by which digital communication incorporates the elements of face-to-face interaction) and *cognitive effort* required utilize the digital communication platform (Kock 2004).

**Network Upload:** the process of sending digitized information from the conversational speaker’s computer or device out to all listener’s devices.

**Network Download:** the process of receiving digitized information from the conversational speaker’s computer or device at all listener’s devices.

**Nonverbal communication:** the multidimensional and multifunctional system utilizing *discourse functions* (pointing, illustrative and beat gestures that accompany speech production), *dialogue functions* (head nods, eye contact, etc.), and *socioemotional functions* (conveyance of emotion and interpersonal attitudes). It is well-acknowledged that nonverbal communication is paramount to conveying information, forming initial impressions, and building trust. (Bente 2008)

**Presence:** a participant's sensation of "being there" or "the (suspension of dis-) belief of being located in world other than the physical one." (Slater 1994) In the context of FACES, the "other" world is any digital environment in which the DH is being viewed and can range from a mobile device to a head mounted display.

**Prime Recipient:** The signatory to the funding agreement with ARPA-E.

**PI:** Principal Investigator.

**Project Team:** A Project Team consists of the Prime Recipient, Subrecipients, and others performing inventive supportive work that is part of an ARPA-E project.

**Realism:** the degree by which the DH represents the captured human and the ability of the communication platform to achieve true presence.

**Reconstruction:** the process of converting a digital information stream to an appropriate representation for subsequent display on the listener's end of the telecommunication.

**Rig, Rigging:** in skeletal animation, the rig is the underlying structure supporting the surface mesh that is responsible for posing or coarse movements.

**Server-side operations:** robust server tools for managing a high volume of digital transportation connections and generally any combination or modification of data streams to facilitate a communicative experience.

**Standalone Applicant:** An Applicant that applies for funding on its own, not as part of a Project Team.

**Subject Invention:** Any invention conceived or first actually reduced to practice under an ARPA-E funding agreement.

**Task:** A task is an operation or segment of the work plan that requires both effort and resources. Each task (or sub-task) is connected to the overall objective of the project, via the achievement of a milestone or a deliverable.

**Telepresence:** is commonly defined as “the use of technology to establish a sense of shared presence of shared space among geographically separated members of a group” (Buxton 1991).

**Total Project Cost:** The sum of the Prime Recipient share and the Federal Government share of total allowable costs. The Federal Government share generally includes costs incurred by GOGOs, FFRDCs, and GOCOs.

**Travel-replacement threshold:** The state of the technology in digital transportation which meets a traveler’s extrinsic (*e.g.* reduce spatial separation) and/or intrinsic (*e.g.* interest in or enjoyment of travel) requirements for physical travel. The importance of intrinsic and extrinsic travel motivators are discussed in detail by Mokhtarian et al. (2015).

**TT&O:** Technology Transfer and Outreach. (See Section IV.G.8 of the FOA for more information).

**Verbal communication:** the spoken dialogue used to transfer information between two or more participants.

**Vergence Accommodation Conflict:** the inability for your eye direction to converge or diverge on a near-field or far-field object that is projected onto an arbitrary visual plane in front of the eye, and then focus on (accommodate) that object in a digital environment. In a head-mounted display, for instance, your eyes will converge on far-field object, but accommodate the screen at the distance it is displaced from your face. The resulting decoupling causes fatigue, discomfort, and potential motion sickness.

**Virtual environment:** a network-based digital communication environment which enables interaction between two or more individuals, and sometimes interaction with elements within digital space which they occupy. Examples of commonly used virtual environments are Second Life, FaceTime, and Skype.
